Vice-President Thiha Thura U Tin Aung Myint Oo, wife Daw Khin Saw Hnin attend opening of new building at Sitagu World Buddhist Academy (Yangon)

YANGON, 17 June—A ceremony to inaugurate the new building of Sitagu World Buddhist Academy (Yangon) was held at the academy in Dagon Myothit (North) Township of Yangon Region at 9.30 am today, attended by Vice-President of the Republic of the Union of Myanmar Thiha Thura U Tin Aung Myint Oo and wife Daw Khin Saw Hnin.

Also present at the gala ceremony were Chancellor of Sitagu World Buddhist Academy Dr Bhaddanta Nanissara (Ph.D., D.Litt.), the rector abbot, the registrar abbot, the administrator abbot and lecturer abbots, Chairman of the Union Election Commission U Tin Aye, Union Minister for Information and for Culture U Kyaw Hsan, Union Minister for Forestry U Win Tun, Union Minister for Construction U Khin Maung Myint, Union Minister for Education Dr Mya Aye, Union Minister for Health Dr Pe Thet Khin, Union Minister for Religious Affairs Thura U Myint Maung, Chief Minister of Yangon Region U Myint Swe and their wives, deputy ministers, Yangon Region ministers, ambassadors of foreign missions in Yangon and their wives, embassy officials, guests, wellwishers and Sitagu missionary members.

Union Minister Thura U Myint Maung unveiled the signboard of the academy.

People’s Desires

* Oppose those relying on external elements, acting as stooges, holding negative views
* Oppose those trying to jeopardize stability of the State and progress of the nation
* Oppose foreign nations interfering in internal affairs of the State
* Crush all internal and external destructive elements as the common enemy

Make sure every literate person keeps reading

The progress of a nation is usually measured by its literacy rate. In this 21st Century also called the age of knowledge, literacy not only ensures the ability to read but also helps us to know about Myanmar affairs and global issues and then to broaden our horizons.

As literacy is a force for human beings, it is important for everyone to be literate and they need to have the constant reading habit. So, cooperative efforts are required to organize the people to cultivate a habit of constant reading.

Today, Myanmar has created conditions for formal education, informal education and self-learning. The youth are in a position to study different branches of international standard with the use of modern communication technologies. Thanks to the basic literacy efforts for post-school-age children, young people and adults, the adult literacy rate has increased and the literacy rate of Myanmar has jumped to more than 94 percent.

However, there are still literate people who rarely read. As there have been books on various subjects such as economic, education, health, social and cultural affairs, we should read a lot to widen our scope of knowledge and promote our personality. It is also necessary to read notices, billboards, warnings and instructions in public places when we go round.

Warnings against smoking, spitting and rubbish throwing are found in passenger buses. Billboards and wall sheets saying that we are to follow instructions on keeping the environment clean and beautiful and proper drainage are set up in public places. But there are few people who follow those instructions.

Departments concerned are speeding up beautifying tasks and public health and disease prevention measures. Since such measures are related to the whole society, all literate people need to keep on reading so that they can become polite and disciplined citizens with improved knowledge.

Bolton man in court on bomb and ricin charges

**LONDON, 17 June**— A British man appeared in court on Thursday accused of having instructions to make a bomb and being in possession of a recipe to make the deadly poison ricin.

Asim Kauser, 25, an unmarried British national whose family hail from Pakistan, is charged with four offences under anti-terrorism legislation after material was found on a USB key.

Kauser, from Bolton in Lancashire, was arrested at his home on 6 June “on suspicion of possessing information of a kind likely to be useful to a person committing, or preparing an act of terrorism, between January 2009 and June 2011.”

He was charged with having “various instructions in how to make an improvised explosive device”.

Kauser spoke only to confirm his name and address during the hearing at City of Westminster Magistrates’ Court in London.

His lawyer made no application for bail and the case was adjourned until 14 July for committal to London’s Central Criminal Court, more commonly known as the Old Bailey.

Australian Federal Police joins fight in Mexican drug war

**CANBERRA, 17 June**— Australian Federal Police Commissioner Tony Negus on Friday said an officer has been sent to Los Angeles of US to work with authorities to combat Mexican drug syndicates.

Negus said Mexican cartels see Australia as a ripe target for cocaine because of demand and also the high value of the dollar.

“We continue to try to address problems as they arise and before they arise by being proactive and working with our international partners,” he told parliament in Canberra on Friday.

“We do remain an attractive target. The mark-ups in a dollar value are significant and I think we’ve got a significant problem for a number of years to come with cocaine.”

Negus added another police officer is also working with the FBI and other authorities in the United States to address the problems.

**Parts of Mexico, particularly near the US border, have seen a rise in suspected drug violence, with more than 37,000 deaths blamed on drug gangs since the launch of a military crackdown on organized crime at the end of 2006.**

Civilian killed in Iraq’s violence

**BAGHDAD, 17 June**— A civilian was killed and two people wounded in separate attacks in Baghdad and Iraq’s northern city of Mosul on Thursday, the police said.

Grenades using assault rifles shot dead a man working as a porter in a popular vegetable market in western the city of Mosul, some 400 km north of Baghdad, a local police source told Xinhua on condition of anonymity.

Also in Mosul, Zuhair al-Jubouri, a member of Mosul’s city hall, was critically wounded when a roadside bomb went off in front of his house in eastern the city while he was leaving to work in the morning, the source said.

In Baghdad, Mahdi Khudair, a chief of security for Baghdad airport, was wounded in the morning when gunmen using silenced weapons opened fire on his car while he was driving in Mansour District in western the capital, an Interior Ministry source told Xinhua on condition of anonymity.

The attacks are part of wave of assassinations by militias and gangs against Iraqi security forces, members, officials and civilians. The attackers’ tactics varied from suicide bombings, gunfire by silenced weapons and sticky bombs attached to vehicles.

The latest bloody wave across the country underscores the challenges that the Iraqi security forces are facing as they struggle to restore stability and normalcy in Iraqi cities about seven months before the departure of all American forces by the end of 2011.

Kabul, 17 June— The killings of American soldiers by Afghan troops are turning into a “rapidly growing systemic threat” that could undermine the entire war effort, according to a classified military study.

The study by Jeffrey Bordin, a political and behavioral scientist working for the US Army in Afghanistan, warns that the magnitude of the killings “may be unprecedented between ‘allies’ in modern history.”

According to the Wall Street Journal, it is based on interviews with some 600 Afghan troops. The report concludes that there is a dangerous “crisis of trust” between Afghan forces and American soldiers that is being ignored by top commanders.

Coalition officials say they aren’t ignoring the killings, but say that such attacks don’t represent a significant threat to the mission.

Afghan troops have killed at least 57 coalition troops since 2007. A few of the attacks have been traced to infiltrators from the Taleban, who are fighting to topple the US-backed government.

The study has been debated in military circles since it was first distributed in early May.
Microsoft Kinect makes moves on computers

SAN FRANCISCO, 17 June—Microsoft on Thursday began letting software developers imbue computers with voice and motion-sensing technology from its Kinect controller for the Xbox 360 videogame console. A free Kinect for Windows Software Development Kit opens doors for computer programmes enhanced with depth-perception, voice recognition, or gesture controls using the popular console accessory.

“We are looking at taking the Kinect out of the game space a bit and putting it in other spaces,” said Halimat Alabi, a developer who attended a 24-hour Halloween-themed coding marathon at Microsoft’s headquarters in Redmond, Washington.

The kit was available for download at research.microsoft.com/kinectsdk. Microsoft last week added YouTube, voice commands, television shows and more to Xbox 360 with Kinect as the hot-selling videogame console matures into an entertainment centre for all.

Germans open cybersecurity centre

BERLIN, 17 June—Germany’s interior minister opened Thursday a new cybersecurity centre to protect the country’s infrastructure from what he said was a growing menace posed by hackers. “Protecting critical infrastructure is at the core of cybersecurity,” Hans-Peter Friedrich said in Bonn. “We are forced to admit that the danger of attacks on these systems is growing.” Germany’s new centre in the former West German Capital Bonn has 10 full-time employees from different national security agencies and will work closely with the police, the military, intelligence bodies and others.

Germany, Europe’s biggest economy, is far from being alone among government agencies, firms and individuals coming under attack from foreign states and organized crime attempting to hack into computer networks. In 2009 the United States created its own Cyber Command, while NATO leaders agreed last November to entrench cybersecurity as one of the 28-nation military alliance’s priorities.

Volcano ash turns Asian eclipse blood red

SYDNEY, 17 June—Asian and African night owls were treated to a lunar eclipse, and ash in the atmosphere from a Chilean volcano turned it blood red for some viewers. The Sydney Observatory said the eclipse was to begin at 3:25 am Thursday (1:25 pm EDT, 5:25 pm GMT Wednesday) and last until 5 am.

Scientists said the specific phenomenon happening Thursday — known as a “deep lunar eclipse” — often exudes a coppery colour. But the intensity of the colour depends on the amount of ash and dust in the atmosphere. Luckily for moon-gazers, there was plenty of ash in the air so the moon appeared orange or red, especially in Asia.

Air travellers haven’t been so lucky: The ash has grounded hundreds of flights around the region. Scientists said the eclipse could be safely observed with the naked eye.

Star-eating black hole sends flash from distant galaxy

The energy from the cataclysmic blast is still being observed two and a half months later, said the study published in the journal Science.

“This is truly different from any explosive event we have seen before,” said lead author Joshua Bloom of the University of California at Berkeley. The flash in the constellation Draco was glimpsed 28 March by NASA’s Swift satellite, which is on a mission to unravel the mysteries of powerful explosions in the universe known as gamma-ray bursts.

A few days later, Bloom sent an email to colleagues “suggesting that it wasn’t a typical gamma-ray burst at all,” said the report.

A closer look at the satellite data combined with other observations from the Hubble Space Telescope and the Chandra X-ray Observatory has con-firmed that. It turns out that a star about the same size as the sun was being devoured 3.8 billion light years away.

Scientists said the specific phenomenon happening Thursday — known as a “deep lunar eclipse” — often exudes a coppery colour. Microsoft ramped up voice capabilities in Kinect to allow Xbox users not only to give commands to in-game characters but to speak Bing searches for games, movies, television shows, music and other entertainment content.

Microsoft has sold more than 10 million of the gesture-sensing Kinect accessories for the Xbox 360 worldwide since they hit the market in November of last year. Kinect uses a 3D camera and motion recognition software to let people play videogames on the Xbox 360 using natural body movements and voice commands instead of hand-held controllers.

Germany opens cybersecurity centre

BERLIN, 17 June—Germany’s interior minister opened Thursday a new cybersecurity centre to protect the country’s infrastructure from what he said was a growing menace posed by hackers. “Protecting critical infrastructure is at the core of cybersecurity,” Hans-Peter Friedrich said in Bonn. “We are forced to admit that the danger of attacks on these systems is growing.” Germany’s new centre in the former West German Capital Bonn has 10 full-time employees from different national security agencies and will work closely with the police, the military, intelligence bodies and others.

In 2009 the United States created its own Cyber Command, while NATO leaders agreed last November to entrench cybersecurity as one of the 28-nation military alliance’s priorities.

Sony’s Music Unlimited comes to Android

TOKYO, 17 June—Sony has released an app making its Music Unlimited online streaming available on smartphones running Google’s Android system, amid growing com-petition from Amazon and Apple in cloud-based services.

Sony’s digital cloud-based music service, which launched in December and is available in Europe, the United States, Australia and New Zealand, allows users to stream millions of songs to Sony devices but previously lacked mobile access. Sony last week said it would restore all Qriocity online music and video distribution services everywhere except Japan after shutting it with the PlayStation Network down in April after hackers compromised personal data from 100 million accounts.

The launch of the new app will make the service available on smartphones running Android as well as devices such as the PlayStation3, Internet-connected Sony televisions and Blu-ray players. The app will be available to users in the United States, France, Germany, Ireland, Italy, Spain, Britain, Australia and New Zealand.

The service allows users to stream music content from a catalogue of more than seven million songs licensed from labels such as Universal Music Group, Sony Music Entertainment, Warner Music Group, EMI Music and independent labels. Monthly subscription fees start at $3.99.
**Greece default could trigger chain reaction**

**FRANKFURT, 17 June**—Greece’s economy is small but the shock waves from a default on its debt could be amplified by links in the global financial system to hurt stocks, banks and entire economies far from the epicenter in Athens.

In Greece, banks could go bust, overwhelming the government’s ability to bail them out, and lenders in France, Germany and elsewhere in Europe could suffer serious losses.

And the resulting market turmoil could strain the European Union’s backstop fund, pushing European leaders to drum up yet more taxpayer financing, with voters already annoyed at funding other people’s failed governments.

The exact effects of a Greek debt implosion are hard to anticipate, in part because no one knows how big the losses would be for bond holders, who stand first in the chain of dominos. Forced losses of 50 percent would be one thing, a voluntary stretchout of repayment another.

Beyond the immediate hit to banks, the biggest fear is that of contagion—a difficult-to-predict chain reaction that could roil markets and make it harder for other indebted countries to cope with their debts, with the result being higher borrowing costs for eurozone countries.

**Teens, young adults may drive flu epidemics**

**NEW YORK, 17 June**—Small children, with their image of runny noses and dirty hands, may be unfairly vilified for their role in spreading sickness, according to a study.

Instead, teens and young adults may be the main drivers of seasonal and pandemic flu, a report in the American Journal of Epidemiology said. Flu cases tended to peak in Canada in the 10-19 and 20- to 29- age brackets before the disease topped out in older adults or young children during seasonal and pandemic flu outbreaks — meaning prevention in this age group may be key to slowing transmission of flu on a bigger scale.

“For seasonal influenza, both the 10-19 and 20-29 year age groups peaked one week earlier than other age groups, while during the fall wave of the 2009 pandemic, infections peaked earlier among only the 10-19 year age group,” wrote lead researcher Dena Schanzer, of the Public Health Agency of Canada.

“This analysis casts doubts on the hypothesis that younger school-age children actually lead influenza epidemic waves.”

**Health tip: Factors that contribute to skin cancer**

People who have had severe blistering sunburns or frequent exposure to the sun’s ultraviolet rays are at greater risk of developing skin cancer, the US National Cancer Institute reminds us.

Here the agency’s list of additional factors that increase your risk of getting the disease:

- Using tanning beds on a regular basis.
- Having had skin cancer before.
- Having a close family member with a history of skin cancer.
- Having fair skin that burns easily.
- Taking medication that increases sensitivity to sunlight.
- Having a medical condition that compromises the immune system, or taking a medication that suppresses the immune system.—Internet

**Premature birth stress lasts into adulthood**

**PROVIDENCE, 17 June**—Infants born prematurely are less healthy, have more social and school struggles, and face more risk of heart-health problems as adults, US researchers say.

Mary C Sullivan of Women and Infants Hospital and an adjunct professor of pediatrics at the Alpert Medical School at Brown University in Providence, RI, and colleagues studied babies born prematurely at Women and Infants Hospital who are now 23 years old.

The preliminary findings include:

- Male gender and birth weight affect early adult pulmonary function.
- The poorest pulmonary outcomes and higher resting blood pressure were for those born at extremely low-birth weight.

Data from the group age 17 revealed physical health, growth and subtle neurological outcomes were poorer in the preterm groups.

Infants with medical and neurological impacts had a 24 percent to 32 percent increase in acute and chronic health conditions.

- Continued monitoring of adults born preterm is warranted, not only during young adulthood but as they reach middle age.
- Children who were born preterm have a persistent drive to succeed.

**Toyota promises shareholders revival from disaster**

**TOYOTA, 17 June**—President Akio Toyoda promised shareholders a revived Toyota despite the production disruptions from the earthquake and tsunami that decimated northeastern Japan on 11 March, and first offered his prayers for those killed. The disaster dominated Friday’s annual shareholders meeting.

Toyoda promises shareholders a revived Toyota despite the production disruptions from the earthquake and tsunami that decimated northeastern Japan on 11 March, and first offered his prayers for those killed. The disaster dominated Friday’s annual shareholders meeting at Toyota Motor Corp headquarters in the town named after the world’s biggest automaker. It started with a solemn moment of silence for those killed and missing, now estimated at more than 23,000 people. The first question from investors was about what the company was doing in response to the destruction.

But the overall mood was supportive and upbeat, periodically interrupted by applause, unlike shareholder meetings in recent years when Toyota officials were on the defensive for massive global recalls caused by quality lapses and profit drops that followed the financial crisis.

Toyota executives said they felt vindicated by the decision by US authorities earlier this year that there were no electronic-system defects in Toyota vehicles, as some had claimed, and that the problem with unintended acceleration had been with faulty floor mats.—Internet

**Chicago grains extend loss on stronger dollar, gloomy economy**

**CHICAGO, 17 June**—Chicago grains extended weak sentiment into Thursday and registered a fourth straight drop, as concerns over improving weather and the economic situation in Europe sparked wide long liquidations. Wheat even lost more than 35 cents, falling below seven dollars per bushel.

The most active corn contract for July delivery shed 24.25 cents, or 3.34 percent, to close at 7.015 US dollars per bushel. July wheat slumped 35.25 cents, or 4.98 percent, to 6.7325 dollars per bushel. July soybean declined 17.5 cents, or 1.27 percent, to 13.305 dollars per bushel. Market analysts said that the favourable weather forecast and worsening situation in Europe are bearish forces that drive the overall market lower. Besides, the strengthened US dollar exerted additional pressure.—Xinhua

Iran send monkey into space

**TEHERAN, 17 June**— Iran has planned to send a live monkey into space, the country’s top space official has said. According to Hamid Fazeli, the head of Iran’s space organization, the Kavoshgar-5 rocket will be launched during 23 July to 23 August with a 285-kilogramme capsule carrying a monkey to an altitude of 120 kilometres.

He said this after the country successfully launched its Rassad-1 reconnaissance satellite into space. News.com.au reports. Fazeli also announced plans for the launch in October of the Farir satellite with a lifespan of a year and a half, and to be placed at an altitude of 400 kilometres, the report said.

In February, President Mahmoud Ahmadinejad unveiled a space capsule designed to carry a live monkey into space along with four new prototypes of home-built satellites the country hopes to launch before March 2012.

At the time, Fazeli touted the launch of a large animal into space as the first step toward sending a man into space, which Teheran claims is the first step toward sending a man to the moon.

Eight children hospitalized in France with E coli infection-related symptoms

**PARIS, 17 June**— Six children aged between 20 months and eight years old were hospitalized in Lille, a northeastern city in France, on Thursday after showing symptoms of being infected with E coli strain bacteria.

The six kids were seriously ill but in stable condition and an seventh child was able to return home soon, hospital sources were quoted by Le Figaro as saying.

The children fell ill after eating steak bought from Lidl, a German discount supermarket chain, but the "escherichia coli to date has no connection with the recent outbreaks in Germany," local media quoted the Regional Healthy Agency of Lille as saying.

Samples sickening the kids have been sent for examination, and the result is expected later in the day. The producer of the steak, a France-based company, has announced in a statement posted before Thursday morning the withdrawal of all concerned product.

In France, 70 to 100 cases of contamination by E coli bacteria are reported each year, but with a mortality rate below 1 percent, reported the French daily Le Figaro.

The outbreak of a fatal strain of E coli has killed more than 30 people in northern Europe, and sickened over 3,200 others.
Myanmar, China to work together in mining sector

Nay Pyi Taw, 17 June—Union Minister for Mines U Thein Htaiq received Chinese Ambassador Mr Li Junhua.—MNA

In connection with the incident in which a bomb exploded on Yangon-Mandalay No (3) up-train between Shwemyo station and Hsinthaya station in Taikdon Township on 18 May, killing two and injuring nine, culprit Kyaw Di (a) Marino sent by the KNU insurgent group has been arrested and action is being taken against him in accord with the law. According to investigation, it is learnt that the culprit escaped death by getting off the train instantly after activating the battery-installed mine and that if he was late for seconds, he would be blown up according to the KNU’s plan.

In another incident in which a bomb went off in a pay-toilet of Pyinmana Station killing Naw Gaylar, 40, daughter of U Saw Shwe Lay, the KNU insurgent group trained and sent a bomber by paying the terrorist a certain amount of fees. It was learnt that the bomber also was killed by the bomb blast.

It is also learnt according to investigation that in the incident of bomb explosion in a public toilet of Myoma Market, culprit Aung Ko Lat (a) Aung Gyi managed to escape death as he could leave the place as soon as he had activated the bomb.

KNU insurgents are persuading destructive elements with cash incentives to blow up bombs at crowded places in Nay Pyi Taw to destroy the development of the city and peaceful lives of the people.

Press conference on Han Golf Masters Junior Golf Series held

Yangon, 17 June—Myanmar Golf Federation held a press conference on Han Golf Masters Junior Golf Series 2011 to be sponsored by Han Golf Masters Pte Ltd at Sedona Hotel, here, on 13 June morning. CEO of Han Golf Master Pte Ltd U Chan explained preparations for the golf series. The golf series will be held at Myanmar Golf Club (Yangon) on 24 June, Yedaguniaung Golf Club in Mandalay in the first week of July, Royal Mingaladon Golf Club (Yangon) in the first week of August, Yangon Golf Club in the first week of September and in the first week of November, Punhaling Golf Club in the first week of December. The series will be categorized in the 8-21 aged, the 13-15 aged, the 16-18 aged and the 19-21 aged events. For further information, dial 09-5177956, 09-2037671 and 01-651374.

Nay Pyi Taw Myoma Market’s public toilet bomber arrested within 48 hours

KNU lures culprit to blast bomb in Nay Pyi Taw

MNA

Those who are swayed to the persuasion of KNU insurgents because of their economic problems only will come to a sticky end.

Nay Pyi Taw, 17 June—Authorities have arrested the bomber who detonated a bomb in a toilet of Myoma Market in Zabathiri Township, Nay Pyi Taw, on 10 June, leaving three civilians wounded.

Acting on tips-off, the authorities arrested Aung Ko Latt (a) Aung Gyi, 35, son of U Ye Aung, of Yeni, within 48 hours after the blast.

The culprit confessed that he met with an explosive in-charge of the Brigade-2 of the KNU about three times last month while the rebel was staying at a clandestine village in Thandaung Township, Kayin State, had planned to plant the bomb after getting payment for the bombing.

He agreed with the KNU insurgents to blast the bomb in Nay Pyi Taw as he was lured by the insurgents that they would give him K 3 million in payment if the bombing was successful, he said, adding that he agreed to commit the crime just for money.

The culprit drove a motorcycle to the clandestine village at around 4 am on 10 June and accepted a 4 inches wide, 3 inches long and 2 inches thick bomb wrapped with yellow sticky tape and K 100,000 from KNU insurgent Ka Yin Lay as an advance payment.

After 9 pm, he parked his motorbike near the wholesalers shops in Nay Pyi Taw Myoma Market, checked on the environs and went to the public toilet.

He placed the bomb inside the broken tank of the toilet and set off the bomb by igniting the fuse with cigarette fire as instructed by KNU terrorists.

After the blast, he left Nay Pyi Taw at once to Yeni through the Pyinmana bypass.

The culprit confessed that he blasted the bomb under the assignment given by the KNU insurgents with cash incentive.

KNU insurgents have been applying wicked means to intentionally blow up bombs at crowded places in Nay Pyi Taw to destroy the development of the city and peaceful lives of the people.

In connection with the incident in which a bomb exploded on Yangon-Mandalay No (3) up-train between Shwemyo station and Hsinthaya station in Taikdon Township on 18 May, killing two and injuring nine, culprit Kyaw Di (a) Marino sent by the KNU insurgent group has been arrested and action is being taken against him in accord with the law. It is also learnt according to investigation that in the incident of bomb explosion in a public toilet of Myoma Market, culprit Aung Ko Lat (a) Aung Gyi managed to escape death as he could leave the place as soon as he had activated the bomb.

KNU insurgents are persuading destructive elements with cash incentives to blow up bombs at crowded places in Nay Pyi Taw to destroy the development of the city and peaceful lives of the people. It is reviewed that those who are swayed to the persuasion of KNU insurgents because of their economic problems only will come to a sticky end.

Continued measures are being taken to take action against culprit Aung Ko Lat (a) Aung Gyi.—MNA
Vice-President Thiha Thura U Tin Aung Myint Oo, wife ...  
(from page 1)

Yangon Mayor Yangon Region Minister for Development Affairs U Hla Myint and General Secretary of Sitagu Maha Saddhamma Jotikadhaja U Han released hot-air balloons.

The Vice-President and party together with the Chancellor Abbot visited the meeting hall and special lecture hall.

The Vice-President unveiled the golden curtain of the Lord Buddha Chamber and offered oil lamps to the Buddha Image.

Members of the Sangha recited religious verses and vocalists presented religious songs.

The Vice-President and party took the Five Precepts from the Chancellor Sayadaw. The Vice-President and wife donated provisions to the Abbot.

The Chancellor gave Sitagu Sandesa Katha. The Union Minister for Religious Affairs gave a supplication.

Tampawady U Win Maung supplicated on matters related to Myanmar handicrafts decorated at the convocation hall.

Ashin Pahananda (Sitagu Kyetapwint) recited religious verses composed by Mandalay Maha Witutayon Taikthit Mingala Beikman Sayadaw.

The Chancellor Abbot presented a certificate of honour for donations to the Vice-President and wife.

The Vice-President made observations at the convocation hall.

The Chancellor Abbot gave commemorative pennants and Dhamma gifts to the Vice-President, wife and party.

Sitagu World Buddhist Academy will conduct Diploma Course in Buddha Dhamma and B.A. (Buddhism) course that will last eight months. A total of 288 monks, nuns and laypersons will attend it.

The Basic Course on Buddhism is opened from 8 am to 10.30 am, and arrangements are being made for enthusiasts to attend it.—MNA

NAY PYI TAW, 17 June—Union Minister for Health Dr Pe Thet Khin on 13 June visited People’s Hospital in Monywa of Sagaing Region where he inspected medical rooms, wards and departments.

At nursery and midwifery training school, he called on the principal, instructors and trainees to attach importance to teaching and learning as midwifery is a noble task of saving lives.

He proceeded to Monywa Traditional Medicine Hospital to meet medical staff.

In the afternoon, the Union Minister went to People’s Hospital and Monywa model village rural health centre in Ayadaw Township, and Station Hospital in Khathkhwain Village of Myinmu Township.

China to assist Myanmar in holding SEA Games

NAY PYI TAW, 17 June—Union Minister for Hotels and Tourism U Tint Hsan and Chinese Ambassador to Myanmar Mr Li Junhua held discussions on promotion of non-smoke industry in Myanmar-China border. China’s investment in hospitality industry of Myanmar, at the minister’s office here this morning.

They also exchanged views on technical and other assistance of China for Myanmar in successfully holding SEA Games in 2013.

Also present at the call were Deputy Minister for Hotels and Tourism U Hay Aung, departmental heads of Ministry of Hotels and Tourism and Ministry of Sports.—MNA

The chief minister urged the teachers to nurture younger generations capable of serving interests of the nation, monitoring their mental development.—MNA

Hazards of drug abuse talked at Myitkyina University

Nav Pyi Taw, 17 June—With a view to designating Myitkyina University as drug-free university, to helping youths understand harmfulness of drug abuse and cooperating in anti-narcotics campaigns, an educative talk on disadvantages of drug abuse was held at Myitkyina University in Kachin State yesterday. Chief of Kachin State Police Force Police Colonel Myint Lwin gave talk on narcotics. Medical Superintendent Dr Nyunt Wai of Drug Addict Rehabilitation Centre on danger and disadvantages of drugs, and District Law Officer U Than Hlaing on laws against drugs. After the talks, educative billboards warning danger of narcotics were set up at the front of the university.—MNA

Cooperative officials receives job proficiency skills

Nav Pyi Taw, 17 June—A total of 82 staff officers of the Cooperative Department under the Ministry of Cooperatives have received job proficiency skills during the one-week course in Nay Pyi Taw. The course concluded at the Ministry of Cooperatives here today and Union Minister for Cooperatives U Ohn Myint delivered concluding address at the ceremony this morning. Deputy directors, directors and staff officers who are assigned to cooperative departments in regions and states have received the skills.—MNA
**Tatmadaw columns inevitably counterattack**

**KIA troops for their threats and armed attacks**

**Government opens the door of peace to welcome those who are holding different views if they wish to cooperate with the government in mutually concerned cases for the interests of the nation and the people and run for election in compliance with democratic practices to justly gain power**

**Tatmadaw counterattacks on KIA just to protect its members, nation’s important hydropower project without even a single intention of aggression or oppression**

NAY PYI TAW, 17 June—KIA based in Kachin State is committing deterrence to development projects of Kachin State, disturbing to the tasks, posing threats and disturbance to Chinese staff who are working at hydropower projects. On 16 April, they made threats to stop quarry works on the east bank of the Malikha River and take their permission to continue the works.

On 5 May, KIA entered Lahua Hydropower Project on the east bank of the Malikha River and threatened Chinese staff to move to the west bank of the river within two days and to withdraw the extended camps from the east bank as quickly as possible.

In the afternoon of 8 June, KIA group called and examined a member of Tatmadaw security unit which was discharging security duty at Tarpein Hydropower Project in Kachin State and seized a ruck sack with rounds of ammunition. In that regard, two Tatmadaw officers went to KIA camp to settle the issue. But they were detained by KIA without any reason.

While a military column led by the Base Tactical Operation Commander was marching to Tarpein Hydropower Project from Bhamo, KIA troops taking positions at Hsankha Camp of KIA Liaison Office and at Htoo on the hill at the entrance to Tarpein Hydropower Project opened fires at the column. After responding to the gun fires the Tatmadaw column on 9 June took back the two Tatmadaw officers detained by KIA.

Although the Tatmadaw column informed KIA to withdraw from its temporary camp near Tarpein Hydropower Project not later than 11 June, KIA did not follow. The Tatmadaw column inevitably attacked and occupied the temporary camp on 12 June evening.

On 8 June, members of KIA unreasonably captured a police private and a civilian from the guardhouse of Microwave Station near Keikheik Village, Mansi township, Bhamo District.

Though responsible police force negotiated for their release, KIA did not release them. But, they freed the detainees only when the Tatmadaw column demanded the release on 12 June.

Tarpein Hydelpower Project is the joint venture project of the Ministry of Electric Power No. 1 and Datang (Yunnan) United Hydropower Developing (DUHD) Company of China. The project is an important one and the two sides have invested heavily in the project.

As KIA members disturbed and threatened Chinese experts and employees assigned to the project, authorities warned them not to cause hindrances to the project.

But the KIA did, not pay heed to the warning, instead it launched heavy weapon fire at the project from its Dunbon Outpost, made the route linking Tarpain Hydel Power Project unsafe and blew up pylons carrying cables connecting the project and Bhamo District.

Due to their threats, altogether 215 Chinese employees assigned to the project went back to China from 9 to 14 June. Fifty Chinese employees left the project on 9 June, 84 on 12 June, 53 on 13 June and 28 on 14 June respectively. The project which is equipped with four 60-MHz generators ceased to operate as from 14 June, causing a great loss to the State and the people.

Tatmadaw columns had to inevitably attack the KIA just to rescue its officers detained by the KIA without any reason and to protect high-cost Tarpein Hydropower Project, which can largely benefit the region as well as the nation. In response to the attack of the Tatmadaw, KIA blew up nine bailey bridges, 10 RC type bridges, four concrete bridges, two wooden bridges, altogether 25 bridges, which are of importance in transportation of Kachin State, from 14 to 16 June. Such destructive acts of KIA severely harm interests of the region and the nation, destabilizing tranquility of local people and seriously damaging transport facilities.

Concerning national reconciliation, there are still personalities and organizations at home and abroad and underground organizations that are unwilling to acknowledge the seven-step Road Map and the constitution. Nevertheless, they should bear in mind that they are also Myanmar and should hold the concept that Myanmar is their motherland and the incumbent government is their own government constituted with own national races at different levels.

Chapter (12) of the constitution stated that constitution can be amended in accordance with the procedures. However, no one, on the pretext of this, should degrade the image of their country in international community as well as causing harm to people of own race.

The government has publicly announced that it would open the door of peace to welcome those who are holding different views if they wish to cooperate with the government in mutually concerned cases for the interests of the nation and the people and run for election in compliance with democratic practices to justly gain power. KIA nowadays needs to realize the actual attitude of the State.

The only objective of the Tatmadaw in launching attacks on KIA is just to protect its members and an important hydropower project of the nation without even a single intention of aggression or oppression.——MNA

**Explosion in central Israel kills three**

JERUSALEM, 17 June—At least three people were killed late Thursday night by an explosion in the central Israeli City of Netanya, local source told Xinhua.

The strong blast at a building also wounded more than ten people and trapped dozens. Security forces and rescue service have arrived at the scene to evacuate the residents.

The cause for the explosion was still unclear. Officials quoted the possibility of a gas leak and said the blast was not likely a bomb attack.

Meanwhile, police was searching for a car and two people who were seen leaving the scene shortly after the explosion, according to the local Ynet news service.——Xinhua

Two die, six missing in Indonesian flood

JAKARTA, 17 June—Rescuers have found two dead bodies and kept searching for six missing persons after flood hit eastern Indonesian Province of Gorontalo on Thursday, local official said on Friday.

Senior official at the provincial Disaster Management and Mitigation Agency Muhammad Taher Laindeng told Xinhua by Phone that the waters started submerging Bone Bolange District on Wednesday.

Landslide occurred during the flood and buried scores of people, said Laindeng. "Two bodies have been found and six others are still missing," he said.

Over 1,500 people have taken shelters at the office buildings and the resident houses at higher ground, said Laindeng.—MMA/Xinhua

Japan nuke plant set to treat contaminated water

TOKYO, 17 June—The operator of Japan’s tsunami-hit nuclear plant is making final preparations to launch a crucial system to treat highly radioactive water that has hampered efforts to achieve the primary goal to cool and stabilize the damaged reactors.

More than 100,000 tons of radioactive water have pooled across the Fukushima Dai-ichi power plant, and it could overflow within a couple of weeks if action is not taken. Operator Tokyo Electric Power Co said workers Thursday made final tests on a treatment system ahead of its start.

Three reactor cores melted after the 11 March tsunami knocked out power and destroyed critical cooling systems.—Internet

Dikes breach in east China, more than 120,000 evacuated

HANGZHOU, 17 June—Two dikes breached in east Zhejiang Province Thursday as a result of continuing rains, forcing more than 120,000 people to move to safer places.

At about 6:40 am dikes breached in the township of Jiangzao, Zhujii City near the central part of Zhejiang. A total of 18 villages were flooded and more than 2,500 people were affected.

Seven hours later, dikes in the township of Diankou, Zhujii breached, affecting another 2,516 people.

According to the Zhejiang Provincial flood control and drought relief headquarters, torrential rains triggered flooding and landslides, toppling 2,470 houses and flooding 351 roads.

A total of 2.09 million people from 43 counties in nine of the province’s 11 cities were affected by the disasters. The Lanxi hydrological station of the Qiantangjiang River monitored the biggest flood crest since 1955.

Journalists reported that many roads into the township of Xiangxi were inundated. Pedestrians tried to ford but returned after taking several steps because the water was too deep.

A man surnamed Xia was trapped under a viaduct when his car stalled. When police pulled him free, the water level was at his waist.

The local government is fighting the flooding with 100,000 woven bags and more than 17,000 cubic meters of wood and sand. Nearly 3,000 vehicles and ships, and 41,130 rescuers were dispatched for disaster relief.

Meanwhile, those affected by the disasters have been provided with quilts, drinking water and instant noodles with the value of more than 300,000 yuan (46,153.8 US dollars).—Xinhua

5.3 magnitude quake jolts western Java

JAKARTA, 18 June—A 5.3-magnitude earthquake hit off Ujungkulon, Banten, located on western Java island at 8.15 am on Friday, the Meteorology, Climatology and Geophysics Agency said.

The quake’s epicentre was 10 kilometres deep at a location of 76 kilometres northwest of Ujungkulon. The tremor was felt in Banten and Lampung in Sumatra island.

There were no reports of injuries or damages. No tsunami warning was issued. Indonesia sits on the Pacific “Ring of Fire,” where the meeting of continental plates causes high seismic activity, and Sumatra is particularly prone to earthquakes.—Xinhua

Argentine towns suffer under falling volcanic ash

BUENOS AIRES, 17 June—The government of one province in Argentina declared an economic emergency on Thursday to aid towns where falling ash from Chile’s erupting volcano is endangering livestock and keeping tourists away.

The emergency in Neuquen Province follows a similar measure by the national government in other parts of Patagonia where agriculture has been hit by accumulating volcanic ash.

The decree by Gov Jorge Sapag will mean that those affected can receive tax benefits, among other measures.

Chile’s Cordon Caulle volcano began erupting 4 June, spewing ash that has disrupted flights in countries ranging from Uruguay to Australia.

The ash has also blanketed towns across the border in Argentina. In the area of Villa La Angostura, located 24 miles (38 kilometres) from the volcano, up to one foot (30 centimetres) of ash has accumulated on the ground.

The ash has made it difficult to drive safely on roads, and the eruption came just as resorts in the mountain towns were preparing for ski season.

“Today we can’t anticipate the season’s final results, but we can say that this has ruined the start of the winter season in the coming days,” said Roberto Alonso, mayor of Villa La Angostura.

Residents in the town have been working to clean up the ash, said Alejandro Curieluck, a business owner in Villa La Angostura. “In 15 days we should be operating. The big problem is that the volcano keeps sending up ash,” he said.

Satellite images on Thursday showed the main ash cloud from the erupting volcano stretching about 900 miles (1,400 kilometres) toward the east-southeast, Chile’s National Geology and Mines Service said in a statement.

“The eruption process continues and it’s possible that an increase in activity could occur again, with episodes similar or greater in intensity than those that have occurred so far,” the agency said.—Internet

New research by a team of scientists at the University of Rochester has unveiled an important new mechanism that allows cells to recognize when they are under stress and prime the DNA repair machinery to respond to the threat of damage. Their findings will be published Friday in journal Science.
The scientists, led by biologists Vera Gorbonova and Andrei Seluanov, focused on the most dangerous type of DNA damage — double strand breaks. Unrepaired, this type of damage can lead to premature aging and cancer. They studied how oxidative stress affects efficiency of DNA repair. Oxidative stress occurs when the body is unable to neutralize the highly-reactive molecules, which are typically produced during routine cellular activities. The research team found that human cells undergoing oxidative stress synthesized more of a protein called SIRT6. By increasing SIRT6 levels, cells were able to stimulate their ability to repair double strand breaks.

Researchers identify protein that improves DNA repair under stress
WASHINGTON, 17 June — Cells in the human body are constantly being exposed to stress from environmental chemicals or errors in routine cellular processes. While stress can cause damage, it can also provide the stimulus for undoing the damage.

New research by a team of scientists at the University of Rochester has unveiled an important new mechanism that allows cells to recognize when they are under stress and prime the DNA repair machinery to respond to the threat of damage. Their findings will be published Friday in journal Science.
The scientists, led by biologists Vera Gorbonova and Andrei Seluanov, focused on the most dangerous type of DNA damage — double strand breaks. Unrepaired, this type of damage can lead to premature aging and cancer. They studied how oxidative stress affects efficiency of DNA repair. Oxidative stress occurs when the body is unable to neutralize the highly-reactive molecules, which are typically produced during routine cellular activities. The research team found that human cells undergoing oxidative stress synthesized more of a protein called SIRT6. By increasing SIRT6 levels, cells were able to stimulate their ability to repair double strand breaks.

Millions of women, but this new research shows that the next generation of women could benefit from a new vaccine. The vaccine could cut baby deaths, the scientists said.

Conventional screening cuts baby deaths
LONDON, 17 June — Hundreds of thousands of babies’ lives could be saved each year if pregnant women were screened for syphilis, researchers say.

Syphilis causes 300,000 stillbirths and newborn deaths globally, mostly in sub-Saharan Africa. A study of 41,000 women, published in The Lancet Infectious Diseases, showed that testing and antibiotics could more than halve the number of deaths.

Researchers said screening was cheap and cost-effective. Syphilis is a sexually transmitted disease that results in sores, a rash and ultimately serious damage to the heart, brain and eyes, and can lead to death.

It can also be passed from mother to child in the womb — a condition known as congenital syphilis. Most countries have policies of screening pregnant women, but this does not always take place.

Syphilis is caused by sexually transmitted bacteria known as Treponema pallidum.

INTERNET

in some rural and poor parts of the world. It is thought that fewer than one in eight women is actually screened for syphilis during pregnancy.

More than two million women are pregnant with syphilis each year. This has serious complications in more than two-thirds of cases. It can result in stillbirth, deaths of newborns and low birthweight as well as in the classic symptoms of syphilis.

A group of researchers at University College London analysed 10 previous studies, involving more than 41,000 women, to determine whether screening would be effective.

Mitsubishi unveils super-sized TV at 92-inch!
NEW YORK, 17 June — Mitsubishi has unveiled a mammoth 92-inch 3-D DLP Home Cinema TV.
The TV, which uses digital light-processing technology rather than LCD, is said to give users four times the viewing area offered by a typical 46-inch LCD TV. According to Mitsubishi, it gives an edge over other TVs in terms of 3-D picture quality since it uses the same core technology employed by many 3-D movie theaters, reports the New York Post.
The 92-inch set priced at 6,000 dollars will go on sale next month and also features a new clear contrast screen, which produces deeper blacks and brighter whites. It includes built-in, 16-speaker Dolby Digital 5.1 surround sound. The super-sized TV could be controlled through Mitsubishi’s free remote control app for the iPhone, iPad and iPod Touch.

Russian volcano erupts,
MOSCOW, 17 June — A volcano in northern Russia has erupted, and is churning out ash to a height of 10,000 metres, scientists said Friday. The E.283-metre Shiveluch volcano increased activity in May 2009 and has been periodically spewing ash from three to eight kilometres.

“Low clouds prevent us from getting a clear visual of the eruption, but our seismic data indicates that Shiveluch has churned out ash plumes to a height of up to 10,000 metres,” said an official at the Far Eastern Institute of Volcanology and Seismology. Scientists said the volcanic activity over the past two-three years has altered the contour of the volcano, with the crater increasing in size by nearly 50 percent and the slopes becoming far steeper than before.

Vaccinations against the HPV virus which causes cervical cancer have been a success, according to a new study.

Cervical cancer vaccine a success, says Lancet report
LONDON, 17 June — The first evidence has emerged that nationwide vaccination programmes for young women against HPV, the virus that triggers cervical cancer, are likely to cut the numbers who develop the disease.

A study in Australia, one of the first countries to introduce the vaccination, has shown a drop in high-grade cervical abnormalities — changes to the cells in the neck of the womb that can be the precursor to cancer. Australia introduced nationwide HPV (human papilloma virus) vaccination for women aged 12 to 26 from 2007.

Russell Crowe to play Superman’s father in “Man of Steel”

Which Zack Snyder is on board to direct with Brit thesp Henry Cavill set to play Superman.

In the classic 1978 movie, starring Christopher Reeve, the role was played by Marlon Brando.

While the studio has yet to confirm the casting, the report indicates that an A-list actress is also being sought to play Lara, Superman’s biological mother.

But if the early reports are correct, Crowe will join previously announced cast members Henry Cavill (Superman) and Amy Adams (Lois Lane).

Kevin Costner and Diane Lane will play Superman’s adoptive parents.

“Man Of Steel” is scheduled to hit theaters in 2012.—Xinhua

Jennifer Lopez unsure about “Idol” return

Beijing, 17 June—Jennifer Lopez said that she’s uncertain whether she will return to the “American Idol” judging panel next season, media reported Thursday.

Lopez signed a one-year deal with the show and is happy that there is no rush for her decision.

“This is the question of the hour. I don’t know. I don’t know, I haven’t been forced to make a decision, and I’m glad about that because honestly, I’m very kind of on the fence about it,” Lopez said while appearing on a BBC Radio programme in the UK.

“I had an amazing time doing it and I loved it but I have a lot of other things happening. It’s going to come down to making a choice of what I want to do for the next year. We’re not really at the breaking point yet.”

Man charged with stealing house

Canadian police on Wednesday charged a man in central Ontario Province with stealing a house.

The owner arrived home to find his 10-year-old mobile home in the Ontario community of Dundalk, northwest of Toronto, was missing.

He alerted police who located the “45-foot, double-wide” prefabricated building worth an estimated CAN$30,000 on a rural property “a relatively short distance from where it was taken,” Ontario Provincial Police Constable Dave Myers told AFP.

A 43-year-old man was charged with theft and mischief, and using forged documents to try to convince police that he owned the building.

Authorities could not explain how the home was stolen.

For US men easier to care for cars than their health

Is it any surprise that most men find it easier to love their cars more than themselves? Almost 70 percent of American men said they find it easier to care for their cars than their personal health, according to a survey released on Monday.

And 40 percent said they would be more likely to address issues with their car than their health.

“For many men, tuning up our cars is easier than getting checkups for our health,” NASCAR driver Terry Labonte said in a statement.

Labonte, who was named one of NASCAR’S (National Association for Stock Car Auto Racing) top 50 greatest drivers, is a spokesman for a national campaign launched by Men’s Health Network and the drug company Abbott Laboratories which both conducted the poll, to encourage men to visit their doctors more often.

The survey of 501 men, aged 45 to 65, and their spouses or partners revealed that 28 percent of men do not visit the doctors regularly, and more than 40 percent of the women questioned said they are worried about their husband’s or partner’s health.

A similar number of women also said they are more concerned about their men’s health than their own.

The survey of 501 men, aged 45 to 65, and their spouses or partners revealed that 28 percent of men do not visit the doctors regularly, and more than 40 percent of the women questioned said they are worried about their husband’s or partner’s health.

A similar number of women also said they are more concerned about their men’s health than their own.

One of the main points in the peace deal, brokered by a public complaints bureau, is that the dog owner has to find a way to minimize barking at night. “If either of the two men decides to break the Memorandum of Understanding, the other can bring this document and present it either to the police or in court,” said mediator Michael Tay. “I hope both men can live in peace with each other.”

Neighbours sign peace deal to stop feud

A handshake wasn’t enough for two Malaysian neighbours embroiled in a lengthy and bitter feud sparked by complaints over barking dogs — the two actually signed a peace treaty.

The three-year battle began when one of the men complained to the police in Malaysia’s southern Johor state, where they lived, about his neighbour’s noisy dogs, the Star newspaper reported.

The dog owner retaliated by playing loud music at night, throwing cans of paint into his neighbour’s house and driving his car into the gate. His neighbour filed a counter complaint about the music. When both men decided to end the feud recently, they opted for a signed peace deal or “Memorandum of Understanding” to keep each other in check.

One of the main points in the peace deal, brokered by a public complaints bureau, is that the dog owner has to find a way to minimize barking at night. “If either of the two men decides to break the Memorandum of Understanding, the other can bring this document and present it either to the police or in court,” said mediator Michael Tay. “I hope both men can live in peace with each other.”
**Mavs celebrate first NBA title with downtown parade**

DALLAS, 17 June—In an exuberant parade and victory celebration, Dallas Mavericks fans honoured their championship team with favour, flavor and class. The estimated 250,000 fans at the parade and celebration on Thursday appeared to be more focused on having fun and cheering the team for winning their first NBA championship in their 31-year history. "I’m excited, even though it took them so long," said Tybrenda Bryant, 22 of Dallas, who was among the early arrivers to the event. "I’m a Cowboy’s fan but the Cowboys didn’t bring it home, the (Texas) Stars didn’t bring it home and the Rangers haven’t brought it home. The Mavericks did and we were long overdue." Four hours before the parade began at 10 am (1500 GMT), thousands of revelers had already lined the route that started at the Dallas Convention Center downtown and ended at American Airlines Centre. With wild cheers and victory chants they eagerly greeted the Mavericks and their entourage along the parade route.—*Internet*

**Visa delay makes Rock last-minute US Open arrival**

BETHESDA, 17 June—Robert Rock arrived at the US Open less than 12 hours before his first tee shot, his delay caused by visa issues stemming from an driving-under-the-influence incident when he was a teenager. That’s quite a story in itself, but here’s the punch line: The Englishman shot a 1 under 70 in Thursday’s first round, good enough for a tie for 10th, despite playing a difficult course he had never seen before. “I couldn’t really picture the holes,” he said, “until we walked a hundred yards down the fairway and I could see what was going on.” Rock qualified for his first US Open two weeks ago, but he said the DUI from years ago complicated his efforts to get to the United States. It wasn’t until 4 pm Wednesday that the approval came through and he got his passport back. Then he took an 8 pm flight from England to Newark and, upon landing, hired a car for $1,000 to get him to Maryland, arriving at 3:30 am.—*Internet*

**China’s Li Na seeks ‘double happiness’ at Wimbledon**

BEIJING, 17 June—China’s Li Na rewrote the record books by winning the French Open, and the overnight Asian superstar can cement her place among the game’s elite by sealing back-to-back Slams at Wimbledon. The unassuing Li, 29, has been characteristically candid on her chances at the All England Club, where she is a two-time quarter-finalist and a leading title hope among yet another wide-open women’s field. “The French Open is over, right now I’m preparing for Wimbledon,” she said, according to the Beijing Times. “Wimbledon is a grass tournament, you can’t say that I played badly in the last two Slams so of course I’m going to get good results at Wimblendon.”—*Internet*

**Tottenham boss Ballack’s Germany career over**

BERLIN, 17 June—Michael Ballack, a towering figure in German football for the past decade, is no longer part of the national squad after 98 appearances for his country, the national federation (DFB) said on Thursday. “I have discussed things openly with Michael Ballack, most recently in our meeting at the end of March 2011 and in numerous phone calls since then,” coach Joachim Loew said. “With the Euro 2012 season about to start the time has come for me to make a clear statement.” The former Chelsea and Bayer Munich midfielder, 34, has not played for Germany since the national side lost 1-0 to Argentina in Munich in a March 2010 friendly. In

**Budweiser to sponsor English FA Cup**

WEMBLEY, 17 June—Budweiser has become the first American sponsor of England’s FA Cup. The beer company, which is owned by St. Louis-based Anheuser-Busch, has secured a three-year deal to sponsor world football’s oldest domestic cup competition.

With Budweiser replacing German utility company E.ON as the main sponsor, both of England’s cup competitions are now sponsored by beer companies. Carling is the title sponsor of the League Cup. Manchester City won the FA Cup last month by beating Stoke.—*Internet*

Red Sox hang on to beat Tampa Bay 4-2

PETERSBURG, 17 June—The American League East leading Boston Red Sox held on for a 4-2 win over their divisional rival Tampa Bay Rays at Tropicana Field on Thursday. The expected pitching duel between Tampa Bay’s David Price and Boston’s Clay Buchholz did not materialize as Boston scored three runs in the first two innings while Price struggled with his command. It could have been even worse for Price had Boston capitalized on having the bases loaded twice in the first two innings. Price, however, did recover to pitch five innings, allowing three runs on five hits and five walks while striking out five innings. “I didn’t command the zone at all with any pitch. You’re not going to get by, especially against a team like Boston,” Price said. “I didn’t command the zone at all with any pitch. You’re not going to get by, especially against a team like Boston.”

Summary of observations recorded at 09:30 hr. M.S.T. During the past 24 hours, rain have been isolated in Lower Sagaing Region, scattered in Mandalay and Magway Regions and Shan State, fairly widespread in Kachin State and widespread in the remaining Regions and States with regionally heavyfalls in Rakhine and Mon States. Only with stability and peace will the nation develop
Only with stability and peace will democratization process be successful

Anarchy begets anarchy, not democracy
Riots beget riots, not democracy
Democracy can be introduced only through constitution

People’s Desire

- We favour peace and stability
- We favour development
- We oppose unrest and violence
- Wipe out those inciting unrest and violence

VOA, BBC-sowing hatred among the people
RFA, DVB-generating public outrage
Do not allow ourselves to be swayed by killer broadcasts designed to cause troubles

Ministry of Mines honours outstanding students of staff

NAV PYI TAW, 17 June—The prize presentation for outstanding students of staff was held at the Ministry of Mines, here, this morning.
Union Minister for Mines U Thein Htaik and departmental heads presented prizes to 90 outstanding students in the matriculation examination for 2010-2011 academic year.

They also gave stipends and 177 dozens of exercise books to 177 students at basic education level and 38 students at university level.

The Ministry of Mines provided K 9,155,000 and 177 dozens of exercise books to students this year.

Mexican scientist grows tasty mushrooms from dirty diapers

WASHINGTON, 17 June—In what could be called double benefits from a single shot, a Mexican scientist has found a quick way of breaking down disposable diapers while producing tasty mushrooms.
Alethia Vazquez-Morillas of the Autonomous Metropolitan University in Mexico City has shown that a fungus called Oyster mushrooms, Pleurotus ostreatus, can devour 90 percent of a disposable diaper within two months.
What’s more, the mushrooms grown on diapers are edible and Vazquez-Morillas has dined upon them herself.
“They are cleaner than most of the vegetables you can find in the market, at least in Mexico,” Discovery News quoted Vazquez-Morillas saying in an interview with the Economist. Disposable diapers normally take centuries to biodegrade in landfills. They are mostly made of cellulose, the tough material that plants use for structural support.

Storm news

NAV PYI TAW, 17 June—The Department of Meteorology and Hydrology released news today that according to the observations at 12.30 hrs MST today, the depression over north Bay of Bengal is crossing west Bengal Coast (India).
Current stage of the depression is coded as yellow, which means it is not moving toward Myanmar.
Under the influence of the depression, occasional squalls with rough seas will be experienced off and along Myanmar coasts. Surface wind speed in squall may reach 45 mph.—MNA
