Hlegu Township to provide top health care services for rural people with Korean aid

NAY PYI TAW, 29 May — The Korean Foundation for International Health Care (KOFIH) and the Ministry of Health will upgrade the primary health care system in Hlegu Township with the aim of turning Hlegu Township into a role model for health care services for rural people.

“We discussed establishing the health care system which will be better than the current health care services in Hlegu Township,” said an official of the Ministry of Health after a meeting between authorities from the ministry and KOFIH in Nay Pyi Taw on Wednesday.

There is great need for health care infrastructure in Hlegu Township and local people do not trust the health care services provided by the government as the infrastructures are very old, said David Sir, General Secretary of KOFIH.

The project aimed at strengthening the primary health care system in Hlegu Township is the first of its kind in Myanmar and will take six to nine years to develop, according to KOFIH. KOFIH also plans to improve health care services in other areas after the implementation of the Hlegu Township project.

According to the Ministry of Health, the township currently has a 16-bed hospital, two 6-bed station hospitals—in rural areas and 35 small health care units, as well as one department for fighting malaria. — NLM

Only one-sixth of population has opportunity of formal education: vice president

TOUNGOO, 29 May—The government has been trying to enroll all school-aged children this academic term as only one-sixth of the population of Myanmar are hoping to enroll as many children as possible this term.

The number of students enrolling at schools this year is larger than in previous years as the Ministry of Education and state/region governments are encouraging parents and children to enroll at schools by providing free textbooks, six note books and K1,000 for each primary school student and free textbooks for each middle school student in accordance with the government appeal that “All the people of Myanmar are to participate in the enrollment of all school-aged children.”

Lower house vice speaker receives US law professor

NAY PYI TAW, 29 May—Vice Speaker of Pyidaungsu Hluttaw and lower house U Nanda Kyaw Swa received Professor of Minority Protection Law Mr Tobias Wolff and delegation of the US on Thursday morning in Nay Pyi Taw.

They exchanged views on legislation and constitution of the two countries.

The meeting was attended by Lower House Bill Committee Chairman U T Khun Myat and officials.—MNA

Gov’t welcomes youth participation in politics

YANGON, 29 May —The government is welcoming the participation of youths in the political sector to create a modern developed country in the future, said Union Minister at the President Office U Soe Thane on Thursday at a seminar on youth participation in political parties.

He urged the youths to actively participate in building a peaceful and stable nation, with democracy at its core.

NAY PYI TAW, 29 May—Failing to enact laws that conform to the current situation will not make the democratic system and the market economic system successful as parliament is mainly responsible for legislation, Speaker of both Pyidaungsu Hluttaw and Lower House U Shwe Mann said in a meeting that took place at Zabuthiri Hall of Parliament Building here on Thursday afternoon, sources said.

Speaker Thura U Shwe Mann also called on parliamentary committees to sharpen their ability in carrying out their respective responsibilities for the remaining tenure of parliament.

Gov’t welcomes youth participation in politics

At the same venue at 4pm on the same day, the Myanmar Parliament held a meeting, with addresses by Speaker Thura U Shwe Mann as chairman of MPU and Upper House Speaker U Khin Aung Myint as vice chairman, officials said. In his opening speech, Thura U Shwe Mann urged Region/State parliaments to be frank with their discussion.

Regarding the legislative sector, U Khin Aung Myint stressed parliament should steer the country into a democracy while being in the vanguard of legislative processes, calling for unity in the three main national causes: non-disintegration of the Union, non-disintegration of national solidarity and perpetuation of sovereignty.

In his conclusion remarks, Thura U Shwe Mann commented that a group is always better than an individual in any undertaking, calling on members of parliament to work for the nation and the people as well.—MNA

Failing in legislative system harms democracy, market economic system: Speaker Thura U Shwe Mann

NAY PYI TAW, 29 May—Failing to enact laws that conform to the current situation will not make the democratic system and the market economic system successful as parliament is mainly responsible for legislation, Speaker of both Pyidaungsu Hluttaw and Lower House U Shwe Mann said in a meeting that took place at Zabuthiri Hall of Parliament Building here on Thursday afternoon, sources said.

Speaker Thura U Shwe Mann also called on parliamentary committees to sharpen their ability in carrying out their respective responsibilities for the remaining tenure of parliament.

Deforestation, vehicle and competition tax among top issues in Myanmar Parliament discussions

Nay Pyi Taw, 29 May—The Lower House’s second day session continued on Thursday with deforestation among the main topics of discussion, with the Upper House focusing on the vehicle and competition tax among other issues.

While answering a question of a Lower House representative who criticized excessive logging despite an announcement by the government that export of logs would be banned this year, Deputy Minister for Environmental Conservation and Forestry said that timber extraction was conducted with minimal impact on prime forests, meeting demands of domestic wood-based industries.

Among the main issues discussed in the Upper House was the question of whether a plan to differently tax vehicles and heavy machinery imported through border trading and used in states and regions was feasible or whether a nationwide tax should be applied.

Deputy Minister for Finance Dr Maung Maung Thein said that the government revenue from taxes on imported vehicle could decrease if vehicles registered in states and regions would be lower taxed. He also said it would pose a major challenge to monitor whether or not the vehicles are really registered in the places claimed.

Regarding the upgrading of all township level hospitals into 50-bed ones, Deputy Minister for Health Dr Than Aung said that not all hospitals can be upgraded, but that the ministry is now building new 50-bed hospitals across the nation depending on local needs.

During Thursday’s session, the Upper House accepted to discuss the competition bill submitted by Union Minister U Win Myint at parliament.

According to the Union minister, the bill is aimed at protecting the interest of people against monopoly and manipulation, ensuring free and fair trade, allowing mergers and acquisitions in accordance with the laws and removing unwanted restrictions among economic firms.—MNA

Inclusive green economy discussed at forum in Yangon to promote sustainable development

By Thant Zin Win

Yangon, 29 May—A free public seminar on inclusive green economy was held by Prof. Dr. Aung Tun Thet, the President’s Economic Advisor and member of the President’s National Economic and Social Advisory Council, on Thursday at UMFCCI Conference Hall in Yangon.

Dr. Aung Tun Thet said critical thinking must be promoted, with the seminar focusing on topics such as poverty reduction, job creation and inequality.

‘Myanmar is embarking on a series of radical and far-reaching political, economic and social reforms. Inclusive Green Economy is a path way bringing together social, economic, and environment objectives of sustainable development. It will benefit poor and vulnerable groups and help reduce inequality. It combines ‘Inclusive Growth’ with ‘Green Growth’,’ according to an official statement.

Development can be measured not only in terms of GDP and but also in terms of GNH — Gross National Happiness, participants said.

JITI donates computer, accessories for MR

Nay Pyi Taw, 29 May—Japan International Transport Institute donated software, computer and accessories to the Ministry of Rail Transport on Thursday morning.

Software donated by JITI can draw train timetables automatically, safely and systematically.

Managing Director of Myanmar Railways received the computers and accessories.

Experts from Japan International Consultant for Transportation Co., Ltd are conducting courses on the software for staff of MR.

Thai junta says "right conditions" needed before polls

BANGKOK, 29 May — Thailand’s military rulers held out little hope for early elections on Thursday, a week after the army seized power, saying conditions had to be right and divisions healed before there could be a return to civilian rule.

Army chief General Prayuth Chan-ocha ousted the government of Prime Minister Yingluck Shinawatra on 22 May to end months of protests that had depressed Southeast Asia’s second-biggest economy and raised fears of enduring chaos.

“It is the council’s intention to create the right conditions...to put Thailand on the path to free and fair elections,” Lieutenant General Chatchalerm Chalerm EXISTS said, referring to the army chief of staff, told reporters, referring to the junta.

Thailand has become polarised between supporters of Yingluck and her influential brother, deposed premier Thaksin Shinawatra, and the royalist establishment that sees Thaksin and his pro-business, populist ways as a threat to the old order.

Chatchalerm did not elaborate on what conditions were needed for an election, but said the military wanted to see reconciliation and an end to the political rift that emerged after Thaksin won his first election in 2001.

“I want to ask you how long it takes to heal divisions between two groups that has been going on for 10 years?” Chatchalerm said. “The two sides do not have to love each other but we want the situation to stay calm and peaceful. We need a period of time for all sides to cool down.”

The United States and other allies have criticised the coup and called for a quick return to democracy.

Chatchalerm said the army had been forced to step in reluctantly because of six months of debilitating anti-government protests, organised by a pro-establishment politician, Suthep Thaugsuban.

“Administrative paralysis has been devastating for Thailand. It put a strain on Thailand’s GDP which became negative for the first time in many years,” he said.

Gross domestic product shrank 2.1 percent in the first quarter of 2014, as the anti-government protesters damaged confidence and scared off tourists. Data on Wednesday showed Thailand’s trade shrank in April and factory output fell for the 13th straight month, underscoring the tough job for the military government faces in averting recession.

The military has moved quickly to tackle economic problems, notably preparing payments for hundreds of thousands of rice farmers that the ousted government was unable to make.—Reuters

S Korea denies reported deployment of US missile shield

SEOUL, 29 May — South Korea’s Defence Ministry on Thursday denied the reported deployment of a US missile defence system, saying that it will pursue an indigenous missile shield separately from the US one.

Defence Ministry spokesman Kim Min-seok told a routine press briefing that South Korea is not considering the adoption of the Lockheed Martin’s Terminal High Altitude Area Defence (THAAD) designed to intercept ballistic missiles in an ascending stage.

Kim said the ministry was unaware of whether the United States was seeking the deployment of a THAAD battery on the Korean Peninsula, denying a US daily’s reports. According to the reports, the US military has conducted a site survey for its THAAD battery deployment in South Korea though no final decision has been made yet.

The South Korean military planned to purchase PAC-3 missiles designed to shoot down ballistic missiles in a descending stage, while developing L-SAM, a long-range ground-to-air missile that will intercept missiles at an altitude of 50-60 km, Kim said. The military planned to develop its indigenous interceptor missile by 2022.

Citing experts, Kim said that Scud missiles fired from the Democratic People’s Republic of Korea (DPRK) could be intercepted by the PAC-3 missiles, which would be hard to shoot down the medium-range Rodong missiles.

The spokesman said the military will shoot down ballistic missiles in a descending stage with PAC-3 missiles while developing the L-SAM to intercept at a higher altitude. Denying speculations that South Korea will join the US-led missile shield, Kim said that the Korean Air and Missile Defence (KAMD) is a separate system from the US missile defense, reiterating that the two systems are different geographically and structurally.—Yonhap

PM Narendra Modi to unveil top 10 policy priorities

NEW DELHI, 29 May — Prime Minister Narendra Modi is expected to unveil his top 10 policy priorities on Thursday, seeking to unblock an investment logjam and setting deadlines for action in order to revive the economy.

A top aide flagged the action points ahead of a cabinet meeting at which Modi will begin the task of filling the mandate of the new Prime Minister’s Office, which has named loyalists such as Arun Jaitley to key posts like finance but whose cabinet team lacks strength in depth.

Modi was due to chair a cabinet meeting at 11 a.m., his office said, with a briefing to follow afterwards.

Misra said that Modi’s policy priorities will “necessarily have to be implemented in a time-bound manner”. They would focus on overcoming delays to major infrastructure projects and addressing why India has become a coal importer, he added.

Reuters reported exclusively last week that Modi was considering restructuring Coal India (COAL.NS), the state-controlled mining behemoth, in a bid to halt a decline in output.

The Prime Minister’s Office is expected to become a powerful centre of policy making under Modi, who has named loyalists such as Arun Jaitley to key posts like finance but whose cabinet team lacks strength in depth.

Modi was due to chair a cabinet meeting at 11 a.m., his office said, with a briefing to follow afterwards.

Doubt raised over whether ‘pings’ came from missing Malaysia jet

SYDNEY, 29 May — The US Navy described as “speculative and premature” a media report on Thursday that said four acoustic pings at the centre of the search for a missing Malaysia Airlines jetliner are no longer believed to be from the aircraft’s black boxes.

The report on CNN quoted Michael Dean, the US Navy’s deputy director of ocean engineering, and said authorities now almost universally believe the pings did not come from the onboard data or cockpit voice recorders of Flight MH370.

The Boeing 777, carrying 239 passengers and crew, disappeared on March 8 shortly after taking off from Kuala Lumpur bound for Beijing. Australian search authorities narrowed the search for the missing jet last month after picking up a series of pings near where analysis of satellite data put the last location of the plane some 1,600 km (1,000 miles) off Australia’s northwest.

“Our best theory at this point is that the pings were likely some sound produced by the ship ... or within the electronics of the Towed Pinger Locator,” Dean told CNN.

However, a US Navy spokesman said Dean’s comments were “speculative and premature”. “We continue to work with our partners to more thoroughly understand the data acquired by the Towed Pinger Locator,” the spokesman said in an emailed response. “As such, we would defer to the Australians, as the lead in the search effort, to make additional information known at the appropriate time.”

Australian authorities leading the search did not immediately respond to requests for comment. The discovery of the pings on 5 and 8 April was hailed as a significant breakthrough, with Australian Prime Minister Tony Abbott expressing confidence that searchers knew, within a few kilometres, where the plane wreckage was.

A source close to the investigation has said that those pings were certain to be from MH370’s black boxes because of their frequency and transmission at one second intervals.

However, a thorough scan of the area around the

Policemen shot, wounded near New Caledonia nickel mine

SYDNEY, 29 May — Two French police on the Pacific island of New Caledonia were shot and wounded on Wednesday by young Melanesians, angered by mining giant Vale’s chemical spill in a river.

The two gendarmes suffered slight injuries after being hit by shotgun pellets fired by protesters blocking a highway near the Vale’s $6 billion nickel mine, a spokeswoman for the nearby city of Mont Dore told Reuters.

Police had since restored order and were maintaining a large security presence in the area, she said. Southern New Caledonia has been the centre of violence since Saturday when rioters torched vehicles and buildings near the controversy mine, causing more than $20 million worth of damage, according to Vale’s estimates.

Protesters have been frustrated by the lack of response from indigenous Kanak chiefs to the chemical spill. Vale representatives and local authorities were due to hold a meeting late Wednesday with the chiefs to discuss the situation, she said.

The local government suspended operations at the nickel processing plant in Goro three weeks ago after some 100,000 litres of acid-tainted effluent leaked, killing about 1,000 fish. An independent report on the acid spill which was expected to be submitted to

Boko Haram still holding 219 girls, after escape of four more reported

MADAGASCAR (Nigeria), 29 May — Four more of the girls kidnapped by Boko Haram last month have escaped than previously thought, Nigeria’s Borno state said on Wednesday, but 219 others were still missing and assumed held by the Islamist militants.

The girls were taking exams at a secondary school in the remote northeastern village of Chibok on 14 April when the Islamist gunmen surrounded it, loaded 276 of them onto trucks and carted them off, according to official figures.

Fifty-three escaped shortly afterwards, say authorities in Borno state, which lies at the epicentre of Boko Haram’s insurgency.

Education commissioner Musa Inuwa told Reuters by telephone the four had been reunited with their parents since then, but he declined to give further details of their escape or say when it happened. A senior Borno state official said it was not clear when they escaped, and it may even have been several weeks ago. The parents had not contacted authorities when the girls returned.—Reuters

Israel raids Palestinian publisher, warns against printing Hamas dailies

RAMALLAH, 29 May — A Palestinian publishing house said Israeli forces raided its headquarters in the occupied West Bank city of Ramallah on Wednesday morning and warned it not to publish papers close to the militant group Hamas.

Palestinian officials criticised the move, saying it violated their freedom of expression. Israeli authorities did not immediately respond to a request by Reuters for comment.

At the Al-Ayyam printing press, saying “Israeli authorities informed the newspaper that it would not allow the printing and distribution of newspapers that allegedly incite against Israel, referring to the three pro-Hamas newspapers — Al-Resala and al-Istiqlal.”

“Israel objects to the unity moves and considers Hamas, which has refused to recognise Israel or relinquish its arms, a terrorist group.”

Palestinians hope to reconcile Hamas’s militant stance with Fatah leaders’ willingness to negotiate with Israel in order to achieve statehood in Gaza, the West Bank and East Jerusalem, lands Israel captured in a 1967 war.

“The raid into the borders of the Palestinian state and the violation of its sovereignty and its media institutions is a flagrant attack on Palestinians’ basic human rights and a violation of norms along with international and humanitarian laws that ensure freedom of opinion and expression,” top Palestinian diplomat Hanan Ashrawi said in a statement.

The local government suspended operations at the nickel processing plant in Goro three weeks ago after some 100,000 litres of acid-tainted effluent leaked, killing about 1,000 fish. An independent report on the acid spill which was expected to be submitted to

**East Ukraine city largely calm after battle, rebels seek Russian help**

**DONETSK** (Ukraine), 29 May — Relative calm returned to the streets of Donetsk on Wednesday after the biggest battle of the pro-Russian separatist uprising in eastern Ukraine, a conflict transformed by the landslide election of a pro-European leader who vowed to crush the revolt.

Reuters reporters heard sounds of distant gunfire coming from the south of the city and local media reported brief outbreaks of fighting on the outskirts, although this could not be independently confirmed.

However, this appeared minor compared with on Monday and Tuesday when government forces killed dozens of rebel fighters in an assault to retake Donetsk International Airport, which the rebels had seized the morning after Ukrainians overwhelmingly elected Petro Poroshenko as president.

Pro-Moscow gunmen have declared the city of a million people capital of an independent Donetsk People’s Republic. On Wednesday their leader Denis Pushilin said on Thursday he wants Cabinet approval within the year for a plan to reinterpret Japan’s defence reform by year-end.

States to revise their guidelines for defence cooperation by the end of December.

Exercising the right, which requires Japan to lift its decades-old self-imposed ban, means the country would come to the defence of an ally, most notably the United States, when it is under armed attack that is not necessarily targeted at Japan. “Japan and the United States have agreed to complete work on revising the guidelines by year-end,” Abe said at a session of the House of Councillors’ Foreign Affairs and Defence Committee. It is desirable that (the Cabinet) will make a decision in time for that,“ he added.

Abe wants Cabinet approval on Japan’s defence reform by year-end

WASHINGTON, 29 May — Former US National Security Agency contractor Edward Snowden told a US television interviewer on Wednesday he was not under the control of Russia’s government and had given Moscow no intelligence documents after nearly a year of asylum there. “I have no relationship with the Russian government at all,” Snowden said in an interview with NBC News, his first with a US television network. “I’m not supported by the Russian government. I’m not taking money from the Russian government. I’m not a spy.”

The remarks by Snowden, whose leaks about highly classified US surveillance programs shook the NSA and prompted limited reforms by President Barack Obama, were his most extensive to date on his relations with his host government. Current and former US intelligence officials have said it is unlikely Russian security services have not squeezed Snowden for secrets.

“I think he is now being manipulated by Russian intelligence,” former NSA director Keith Alexander said last month.

But Snowden — who said he wants to return to the United States — said he destroyed classified materials before transiting to a Moscow airport, where he was prevented from onward travel.

“I took nothing to Russia, so I could give them nothing,” he told NBC’s Brian Williams in the hour-long interview.

Later in the interview, Snowden briefly criticized the crackdown on freedom of expression under Russian President Vladimir Putin. Casting himself as a defender of privacy and civil liberties, he deemed it “frustrating” to “end up stuck in a place where those rights are being challenged in ways that I would consider deeply unfair.”

Snowden, who fled to Hong Kong and then Moscow last year, is believed to have access to about 1.5 million secret documents, US officials have said, although how many he actually took is unclear. The leaked documents revealed massive programmes run by the NSA that gathered information on emails, phone calls and Internet use including, in many cases, by Americans.

He was charged last year in the United States with theft of government property, unauthorized communication of national defence information and willful communication of classified intelligence to an unauthorized person.

“If I could go anywhere in the world, that place would be home,” Snowden said.

US officials said he was welcome to return to the United States if he wanted to face justice for leaking details of massive US intelligence-gathering programmes.

Secretary of State John Kerry invited Snowden to “man up and come back to the United States.” “The bottom line is this is a man who has betrayed his country, who is sitting in Russia, an authoritarian country where he has taken refuge,” Kerry told the CBS “This Morning” programme on Wednesday.

 Israeli soldier suspended after fatal West Bank shootings

JERUSALEM, 29 May — Israel has suspended a soldier in the fatal shootings of two Palestinian teenagers at a protest held on 15 May in the occupied West Bank, Israeli media reported on Wednesday.

The incident stirred an outcry after a human rights group released video footage it said showed the youths had not posed any danger to soldiers and they were shot unlawfully.

The killings took place as protests erupted across the West Bank on Nakba Day, when the Palestinians mark the loss of the 1948 war that resulted in the creation of Israel and the flight of hundreds of thousands of Palestinians.

Muhammad Abu Thahir and Nadjim Nuwara had both been shot in the heart, Palestinian hospital officials said, giving their ages as 16 and 17.

Two Israeli media organisations, the Haaretz news website and Channel 10 television, said on Wednesday the Israeli military had suspended a soldier from a communications unit and confiscated his weapon soon after the incident. — Reuters

Snowden: ‘no relationship’ with Russian government

Snowden briefly criticized the crackdown on freedom of expression under Russian President Vladimir Putin. Casting himself as a defender of privacy and civil liberties, he deemed it “frustrating” to “end up stuck in a place where those rights are being challenged in ways that I would consider deeply unfair.”

Snowden, who fled to Hong Kong and then Moscow last year, is believed to have access to about 1.5 million secret documents, US officials have said, although how many he actually took is unclear. The leaked documents revealed massive programmes run by the NSA that gathered information on emails, phone calls and Internet use including, in many cases, by Americans.

He was charged last year in the United States with theft of government property, unauthorized communication of national defence information and willful communication of classified intelligence to an unauthorized person.

“If I could go anywhere in the world, that place would be home,” Snowden said.

US officials said he was welcome to return to the United States if he wanted to face justice for leaking details of massive US intelligence-gathering programmes.

Secretary of State John Kerry invited Snowden to “man up and come back to the United States.” “The bottom line is this is a man who has betrayed his country, who is sitting in Russia, an authoritarian country where he has taken refuge,” Kerry told the CBS “This Morning” programme on Wednesday.

Israeli soldier suspended after fatal West Bank shootings

Jerusalem, 29 May — Israel has suspended a soldier in the fatal shootings of two Palestinian teenagers at a protest held on 15 May in the occupied West Bank, Israeli media reported on Wednesday.

The incident stirred an outcry after a human rights group released video footage it said showed the youths had not posed any danger to soldiers and they were shot unlawfully.

The killings took place as protests erupted across the West Bank on Nakba Day, when the Palestinians mark the loss of the 1948 war that resulted in the creation of Israel and the flight of hundreds of thousands of Palestinians.

Muhammad Abu Thahir and Nadjim Nuwara had both been shot in the heart, Palestinian hospital officials said, giving their ages as 16 and 17.

Two Israeli media organisations, the Haaretz news website and Channel 10 television, said on Wednesday the Israeli military had suspended a soldier from a communications unit and confiscated his weapon soon after the incident. — Reuters

Abe wants Cabinet approval on Japan’s defence reform by year-end

Tokyo, 29 May — Prime Minister Shinzo Abe said on Thursday he wants Cabinet approval within the year for a plan to reinterpret Japan’s pacific Constitution and lift the ban on the right to collective self-defense, amid heated debate in the Diet and within his ruling coalition.

Abe expressed his desire as Japan has been working with the United States to revise their guidelines for defence cooperation by the end of December.

Exercising the right, which requires Japan to lift its decades-old self-imposed ban, means the country would come to the defence of an ally, most notably the United States, when it is under armed attack that is not necessarily targeted at Japan. “Japan and the United States have agreed to complete work on revising the guidelines by year-end,” Abe said at a session of the House of Councillors’ Foreign Affairs and Defence Committee. “It is desirable that (the Cabinet) will make a decision in time for that,” he added.

Abe wants Cabinet approval on Japan’s defence reform by year-end

**WASHINGTON, 29 May** — Former US National Security Agency contractor Edward Snowden told a US television interviewer on Wednesday he was not under the control of Russia’s government and had given Moscow no intelligence documents after nearly a year of asylum there. “I have no relationship with the Russian government at all,” Snowden said in an interview with NBC News, his first with a US television network. “I’m not supported by the Russian government. I’m not a spy.”

The remarks by Snowden, whose leaks about highly classified US surveillance programs shook the NSA and prompted limited reforms by President Barack Obama, were his most extensive to date on his relations with his host government. Current and former US intelligence officials have said it is unlikely Russian security services have not squeezed Snowden for secrets.

“I think he is now being manipulated by Russian intelligence,” former NSA director Keith Alexander said last month.

But Snowden — who said he wants to return to the United States — said he destroyed classified materials before transiting to a Moscow airport, where he was prevented from onward travel.

“I took nothing to Russia, so I could give them nothing,” he told NBC’s Brian Williams in the hour-long interview.

Later in the interview, Snowden briefly criticized the crackdown on freedom of expression under Russian President Vladimir Putin. Casting himself as a defender of privacy and civil liberties, he deemed it “frustrating” to “end up stuck in a place where those rights are being challenged in ways that I would consider deeply unfair.”

Snowden, who fled to Hong Kong and then Moscow last year, is believed to have access to about 1.5 million secret documents, US officials have said, although how many he actually took is unclear. The leaked documents revealed massive programmes run by the NSA that gathered information on emails, phone calls and Internet use including, in many cases, by Americans.

He was charged last year in the United States with theft of government property, unauthorized communication of national defence information and willful communication of classified intelligence to an unauthorized person.

“If I could go anywhere in the world, that place would be home,” Snowden said.

Secretary of State John Kerry invited Snowden to “man up and come back to the United States.” “The bottom line is this is a man who has betrayed his country, who is sitting in Russia, an authoritarian country where he has taken refuge,” Kerry told the CBS “This Morning” programme on Wednesday.
Egypt's Sisi sweeps to victory in presidential vote

CAIRO, 29 May — Abdel Fattah al-Sisi, the general who toppled Egypt’s first freely elected leader, swept to victory in a presidential election, provisional results showed on Thursday, joining a long line of leaders drawn from the military.

But a lower than expected turnout figure raised questions about Sisi’s credibility after his supporters had idolised him as a hero who can deliver political and economic stability.

Sisi captured 93.3 percent of votes cast as counting nearly came to a close, judicial sources said.

His only rival, leftist politician Hamdeen Sabahi, gained 3.0 percent while 3.7 percent of votes were declared void.

Fires erupt in Cairo when Sisi's results emerge.

Cairo, 29 May — A fire erupted in Cairo when Sisi's results began to emerge.

His supporters waved Egyptian flags and sound-detonated car horns on the crowded streets of the capital.

Celebrations lasted through the early hours of the morning.

About 1,000 people gathered in Tahrir Square, the symbolic heart of the popular uprising that toppled Hosni Mubarak in 2011 and raised hopes of a democracy free of influence from the military.

Sisi supporters honked car horns and waved flags.

Dancing dolls dressed in army fatigues quickly went on sale in Tahrir, a reminder of the army’s wide influence in Egypt.

Sisi is the latest in a line of Egyptian rulers from the military that has only briefly broken during Islamist President Mohamed Mursi's year in office.

Sisi, who ousted Mursi last year after mass protests against his rule, is seen by supporters as a strong figure who can end the turmoil that has consumed Egypt since the revolution that ended Mubarak's 30 years in power.

But critics fear he will become another autocrat who will preserve the army’s interests and quash hopes of democracy and reform aroused by the protests that swept Mubarak.

Sisi enjoys the backing of the powerful armed forces and the Interior Ministry, as well as many politicians and former Mubarak officials, a recipe making a comeback.

“We are joyful because Sisi got so many votes, the results will come after an hour, we are here to celebrate,” said Kavther Mohamed, who went to Tahrir with her daughters.

People march on a street in Phnom Penh, Cambodia on 29 May 2014. Approximately 300 people on Thursday marched in Phnom Penh, the capital of Cambodia, to call for the Anti-Rustication Unit and the National Assembly to further focus on the protection of natural resources, an organizer said. — XINHUA

Syria chemical arms destruction deadline won’t be met — UN

UNITED NATIONS, 29 May — The United Nations has confirmed that the destruction of Syria’s chemical arsenal will not be completed by 30 June, a final deadline set as part of a 2013 deal that averted US air strikes against Syria.

The United Nations said on Wednesday it had “lost confidence” in Syria’s commitment to finish “remaining removal operations as quickly as possible, as the authorities have pledged to do.”

However, it is now evident that some activities related to the elimination of the chemical weapons program of the Syrian Arab Republic will continue beyond 30 June 2014, Ban said in the letter, obtained by Reuters on Wednesday.

The Syrian government has already indicated it wants the mission shut down as soon as all chemical weapons are shipped out of Syria. But Western governments want it to continue working for the foreseeable future.

Western officials say they want the UN-OPCW mission to continue investigating what they describe as ambiguities in Syria’s chemical weapons declaration. They have cited US, French and British intelligence that Assad’s government failed to disclose all of its poison gas stock.

The Syrian government has missed several deadlines, most recently its own promise to hand over the remaining chemicals by 27 April. It has also failed to destroy a dozen facilities that were part of the chemical weapons programme.

The government has blamed those failures on security problems and rebel activities, but Western officials have voiced skepticism about those explanations.

Indonesian police officers clash with mock protesters during a security drill for upcoming presidential elections in Jakarta, Indonesia, 29 May, 2014. Indonesia’s presidential campaign is to be held from 4 June to 5 July and presidential polls on 9 July, 2014.

At least 11 killed in church attack in C African Republic

BANGUI, 29 May — At least 11 people were killed when Muslim gunmen sprayed bullets and hurled grenades at people sheltering in a church in the capital of Central African Republic on Wednesday, witnesses said counting local time (1400 GMT).

The church compound was home to some 5,000 Christians displaced by violence, he said.

“The toll will probably be higher because there are many wounded,” Bekas said. “It would have been much worse if the anti-Balaka militia had not come to defend us.”

Fulgence, a displaced person in the church, told Reuters by telephone he had counted at least 28 bodies. A Reuters TV cameraman at the scene also said he saw dozens of bodies being taken away by vehicle.

Peacekeepers from the African Union’s Misca peacekeeping force arrived in armoured vehicles to take control of the scene after the attack. A helicopter from France’s Sangaris peacekeeping mission flew overhead as dusk fell.

The priest of the church, Jonas Bekas, said at least 11 people were killed in the attack, which began at around 3.00 pm.

The attack on the Our Lady of Fatima church took place after hours of skirmishes between anti-Balaka Christian militia and residents of the nearby Muslim neighbourhood of PK5, locals said. Federalique Nakombo, the general secretary of the Episcopal commission for peace and justice, told Reuters that armed men threw grenades into the church compound and opened fire on the crowd, killing priest Paul Emile Nali.

Are rent-regulated apartments for low-income families possible in Yangon?

By Myint Win Thein

Recently, the Yangon UNICEF office said that its financial resources have been strained by the high rents in Yangon, stating that it has to pay about US$ 90,000 a month for its compound, which is still less compared to what other international organizations have to pay.

Another UN agency, the World Health Organization also has a compound in Yangon, larger than that of UNICEF, with the rent price not publicized. The best properties in Yangon are in the hands of a few people resulting in skyrocketing rents, insiders said.

While the financial resources of well-funded international organizations are already strained by the high rents in Yangon, how can low income families find a place to live in Yangon? According to news reports, apartment rents in downtown Yangon rose by K 200,000 per month this year. In addition, tenants have to pay rent for at least six months in advance, paying the rent on a monthly basis which is common practice in most other countries is impossible here.

Most tenants in Yangon have to move out of downtown Yangon as they can no longer afford the rents. This also causes the rents in the suburbs of Yangon to rise, forcing those who have already been living in suburbs to move to the outskirts of the city where rents are cheaper but no proper infrastructure exists. Many now buy huts as the construction costs less than one month rent in the suburbs.

Yangon is a country where taxes on rents are loosely levied and lease of property is poorly regulated. In the US, there are rent-regulated apartments for low income families. Incentives are given to landlords of such apartments with tax breaks on their rents. If taxes are levied strictly on rents, rent-regulated apartments may be possible for low-income families in Yangon too.

All-round Developments of Renovation and Construction of Religious Edifices and Implementation of Religious Matters and the Affairs of the Buddhism throughout the Republic of the Union of Myanmar

According to the present statistical census of the Republic of the Union of Myanmar, the present population of the entire nation stands at over 60 millions. About 85 per cent of population takes faith in Theravada Buddhism of Myanmar.

It is known that the Republic of the Union of Myanmar has been a predominant Theravada Buddhist Nation in the world throughout age since years ago. Consequently, the members of the Sangha, the entire multifarious Buddhist people and the Government of the Republic of the Union of Myanmar, hand in hand, are striving to carry out the noble tasks of all-round developments and new constructions of religious buildings and implementations of religious matters and affairs leading to the purification, perpetuation, propagation and promotion of the Buddha Sasana throughout the country.

We all Buddhists know that such all-round developments of renovations and new constructions of religious edifices have been done since the time of the State Peace and Development Council of the Union of Myanmar. We all Buddhists, from generation to generation, throughout the Republic of the Union of Myanmar will never forget such noble tasks of these historic events in the history of Buddhism of Myanmar.

During the period of the Government of the State Peace and Development Council of the Union of Myanmar, the noble tasks and historic noble events leading to the purification, perpetua-
Pyu ancient cities need conservation:
Deputy Minister Daw Sandar Khin

Yangon, 29 May — As part of the Education Project launched by the Embassy of Israel, Ambassador Hagay Moshe Behar visited Mon and Kayin States between the 22nd – 23rd May 2014. During his visit he had meetings with chief ministers and continued the donation of Soul Bird translation Books, to different public libraries.

On Thursday-22nd, the ambassador met with H.E. U Ohn Myint, Chief Minister of Mon State government at his office and explained the Embassy education officer, gave an interview to the New Light of Myanmar.

Ms Aurelis Fillipetti, Deputy Minister for Culture of France and signed an agreement on cooperation on cultural heritage management between the two countries. The deputy minister also met UNESCO Director General Ms Irina Bokova and discussed matters on the Pyu ancient cities to be put on the World Heritage List.

During the talks, the deputy minister voiced her concern over the damage of the cities, highlighting the urgent need to conserve them.

During a separate meeting with the director of the World Heritage Centre she discussed suggestions of the Advisory Board on including Pyu ancient cities on the World Heritage List. In Paris, the deputy minister invited 21 ambassadors who are members of World Heritage Committee, explaining facts and figures of the cities.

Free education and text books not affordable without
State Gov’t support: Mohnyin township education officer

Mohnyin, 29 May — On the occasion of School Enrollment Day held at a basic education school in Mohnyin on 28 May, over 300 students from low income families were provided with school uniforms and exercise books.

On the occasion, Daw Khin Nwe Nwe, the township education officer, gave an interview to the New Light of Myanmar.

Q: Starting from the 2014-2015 academic year, free education will be given to students up to middle school level and text books will be distributed to the students free of charge. Can you explain who will bear the transportation costs for the distribution of text books to students across Kachin State?

A: Last year when text books for primary schools were distributed, commission from the sale of middle and high schools text books was spent to settle the transportation fees. But this year, text books for the middle schools are distributed free of charge, and therefore the commission from selling just high school level books is not enough. We will seek help from the state government.

Q: Do you believe all middle school students will be given all the required text books?

A: As this is the first year for us to do this, we have a plan to distribute text books to at least 90 percent of Grade VI students, 80 percent of Grade VII, 75 percent of Grade VIII and 74 percent of Grade IX. I believe some have bought text books in advance.
Japan April retail sales tumble after tax hike, rebound may take time

Tokyo, 29 May — Japanese retail sales fell in April at their fastest pace in three years due to declining sales of cars and electronics, offering the first indication of how much consumers are trimming their purchases after a sales tax hike took effect on 1 April.

The 4.4 percent annual decrease in retail sales was more than the median estimate for a 3.3 percent decline, and marked the biggest drop since a devastating earthquake and tsunami in March 2011.

In one encouraging sign, declines in sales of apparel and toiletries were limited, which suggests consumer spending will pick up in May in line with the Bank of Japan’s scenario, but there are worries that a recovery in durable goods could take more time.

Moderate exercise helps maintain mobility in older adults

Washington, 29 May — A daily 20-minute walk can help older adults reduce the risk of losing the ability to walk without assistance, thereby enhancing the quality of their later years, a US study said on Tuesday.

The study, published in the Journal of the American Medical Association, found that moderate exercise such as walking can help aging adults maintain their mobility, or the ability to walk without assistance, at a rate 18 percent higher than older adults who did not exercise.

Called the Lifestyle Interventions and Independence for Elders (LIFE) trial, the study recruited 1,635 sedentary men and women aged 70 to 89 to investigate how daily physical activity will prevent older adults’ loss of mobility, defined in the study as the ability to walk 400 meters, or about a quarter of a mile.

Although 400 meters might sound like an arbitrary number, it’s an important figure for older adults, according to the study led by researchers at the University of Florida (UF).

“There are signs that declines in spending on daily necessities is already bottoming out, which supports a gradual recovery in spending,” said Shujii Toronchi, senior fixed income strategist at Mitsubishi UFJ Morgan Stanley Securities. “There are signs that recovering is once around the track.”

The S&P500 index snapped a four-session winning streak on Wednesday to end slightly below a record closing high on Tuesday, though it achieved an intraday record high.

Bond yields fell sharply as investors prepared for the ECB’s expected easing, German 10-year Bund yields fell to a one-year low of 1.285 percent and periphery euro zone debt yields also tumbled, with Spanish debt yielding a record low of 2.823 percent.

“In the past, when share prices rise, bond prices fell. But that no longer applies. We are likely to see a combination of high share prices and low bond yields,” said Daikyu Uno, chief strategist at Sumitomo Mitsui Banking Corp.

An unexpected increase in German unemployment and a deceleration in the euro zone money supply on Wednesday reinforced expectations that the ECB will introduce further stimulus at its meeting on 5 June.

ECB executive board member Yves Mersch ramped up the rhetoric, saying the next meeting could yield a combination of policies to tackle low inflation and low credit growth, but that the timing of implementation could vary.

Measures being prepared by the ECB are likely to include cutting the deposit rate into negative territory, effectively charging banks to hold cash at the ECB overnight, and bank loans to increase lending to smaller companies.

“The ECB’s easing is the biggest thing for markets for now. Nobody at this point clearly knows the ramifications of negative rates. In our dealing room, we have had heated debate but got no conclusion,” said a proprietary trader at a major Japanese bank.

“But at least it’s something that will help bring down long-term bond yields,” he added.

The prospect of radical easing spilled over to other markets, with the 10-year US Treasuries yield falling to 2.44 percent from 2.52 percent, hitting its lowest level in almost 11 months.— Reuters

Asian shares at one-year high, bonds fly high on ECB hopes

Tokyo, 29 May — Asian shares inch up to a one-year high on Thursday while global bond prices surged, pushing their yields to multi-month lows, supported by expectations of easier monetary policy from the European Central Bank.

MSCI’s broadest index of Asia-Pacific shares outside Japan rose 0.15 percent led by gains in Hong Kong and Singapore shares and hitting one-year highs for the fifth time in the last six sessions.

Japan’s Nikkei share average gained 0.1 percent. Spreadbetters see European shares opening mostly flat, with Germany’s DAX seen unchanged after hitting a record high the previous day and Britain’s FTSE 100 seen up to 0.1 percent higher.

On Wall Street, the S&P500 index snapped a four-session winning streak on Wednesday to end slightly below a record closing high on Tuesday.

Top scientists warn WHO not to stub out e-cigarettes

London, 29 May — A group of 53 leading scientists has warned the World Health Organization not to classify e-cigarettes as tobacco products, arguing that they would jeopardize a major opportunity to slash disease and deaths caused by smoking.

The UN agency, which is currently assessing its position on the matter, has previously indicated it would favor applying similar restrictions to all nicotine-containing products.

In an open letter to WHO Director General Margaret Chan, the scientists from Europe, North America, Asia and Australia argued that low-risk products like e-cigarettes, which are “gateway” products to tobacco smoking - though the devices are controversial. Because they are widely available and are used by kids and young adults, they have been linked to increases in use of other tobacco products.

A customer tests e-liquids for e-cigarettes during the first international fair of electronic cigarette and vapology "Vapexpo" in Bordeaux, southwestern France, on 13 March, 2014.— Reuters

A move to classify e-cigarettes alongside regular cigarettes would push countries into taking similar tough measures to restrict demand, including raising taxes, banning advertising, introducing health warnings and curbing use in public places.

New Zealand study fills gap in understanding climate change impact on poles

WELLINGTON, 29 May — New Zealand scientists said on Thursday they had made a breakthrough in understanding how large waves were breaking up Antarctic sea ice, which could change understanding of how climate change is affecting the two global ice caps.

Studies by the government’s National Institute of Water and Atmospheric Research (NIWA) showed that large waves those bigger than 3 meters can break sea ice over greater distances than previously believed.

They said this process could be “the missing science” that explained the increase in Antarctic and rapid decrease in Arctic sea ice. The findings were in contrast to the predictions from climate change models that Arctic sea ice should have already begun retreating and could explain the accelerating loss of Arctic sea ice, NIWA scientist Dr Alison Kohout said in a statement.

“In the Arctic there is a lot of evidence of sea ice retreat, yet scientists have been unable to reproduce the speed of sea ice retreat in their modeling. This suggests something is missing from the models,” she said.

Sea ice played a critical role in moderating the global climate system and the state of the sea ice was an indicator of how climate was changing around the poles.

The Southern Ocean was continually generating large and unforgiving swells that broke the sea ice apart, removing the barrier between the ocean and atmosphere.

The breakthrough was due to new technology and enabled scientists to collect more and better data about large waves, NIWA’s Dr Mike Williams said in the statement. —Xinhua

Intel readies 3D-printed robots for handy consumers

RANCHO PALOS VERDE (California), 29 May — Intel Corp introduced a walking, talking robot on Wednesday made from 3D-printed parts that will be available to consumers later this year, if they are willing to assemble it with a kit that costs around $1,600.

The company’s Chief Executive Brian Krzanich was accompanied by “Jimmy” on stage at the Code Conference in Rancho Palos Verdes, California. The white 2-foot tall robot shuffled onto the stage, introduced itself and then waved its arms.

Intel describes Jimmy as a research robot, but the company intends to make 3D-printable plans available without charge for a slightly less advanced version, and partners will sell components that cannot be 3D-printed, such as motors and an Intel Edison processor, in kits. Jimmy can be programmed to sing, transcribe late languages, send tweets and even serve a cold beer.

Under Krzanich, who took over a year ago, the chipmaker is trying to be an early player in emerging technologies like smart clothing, after coming late to the mobile revolution and making little progress in smartphones and tablets. Its strategy includes engaging tech-savvy do-it-yourselfers and weekend hobbyists working on everything from Internet-connected baby blankets to robots and drones.

Owners of the robots will be able to programme them to perform unique tasks. They can then share the programmes with other owners as downloadable apps. Intel, based in Santa Clara, California, hopes the price for the robot kits will fall below $1,000 within five years. Separately on Wednesday, entrepreneur Bill Gross announced plans for a 3D printer that would sell for $149, far less than devices that now typically sell for $1,000 or more.

Multinational crew blasts off, arrives at space station

CAPE CANAVERAL, 29 May — Leaving politics behind, a veteran Russian cosmonaut and a pair of rookie astronauts from the United States and Germany blasted off from the Baikonur cosmodrome in Kazakhstan on Wednesday for a six-month mission aboard the International Space Station.

The crew’s Russian Soyuz rocket lifted off at 3:57 pm EDT and headed into orbit, a live broadcast on NASA Television showed.

Perched on top of the rocket was a Russian Soyuz capsule holding cosmonaut Maxim Surayev, a retired Russian Air Force colonel; NASA astronaut and US Navy pilot Reid Wiseman; and German astronaut and geophysicist Alexander Gerst.

“Adrenaline is rising but feel relaxed,” Gerst, 38, posted on Twitter as he and his crewmates rode a bus out to the launch pad.

Less than six hours after liftoff, Gerst and his crewmates reached the station, a $100 billion research laboratory as it flew about 260 miles (418 km) above the Pacific Ocean west of Peru.

The Soyuz slipped into a berthing port on the station’s Rassvet module at 9:44 pm EDT.

The station, a project of 15 nations, is overseen by the United States and Russia. Tensions between the countries have been strained following Russia’s annexation of Ukraine’s Crimean peninsula and economic sanctions imposed by the United States as punishment. But until recently, the space partnership was largely exempt from the political rancor and the sanctions’ financial impacts. —Reuters

Google building self-driving cars with no driver seat, steering wheels

RANCHO PALOS VERDES (California), 29 May — Google Inc is building cars that don’t have steering wheels, accelerator pedals or brake pedals, in an ambitious expansion of the Internet company’s efforts to develop self-driving cars.

The small electric cars, which seat two passengers, are currently prototypes that Google has been building through partnerships with automotive suppliers and manufacturers. Google’s co-founder Sergey Brin said at the Code conference in Southern California on Tuesday, Google aims to build up to 200 such cars in near term and hopes the vehicles will be available in various cities within a couple of years, he said.

Google has been testing self-driving cars since 2009, incorporating laser sensors and radars into standard automobiles such as the Prius from Toyota Motor Corp and sport-utility vehicles from the luxury car division Lexus.

While those vehicles require a human to remain in the driver’s seat and to take over in certain situations, the new cars operate completely autonomously.

Brin said the cars could operate as a service, picking up passengers when summoned, and potentially even operate as fleets of interconnected “trains”.

“Ten seconds after getting in was I doing my email, I had forgotten I was there,” Brin said of his experience riding in one of the pod-like vehicles, which resemble a cross between a Smart car and Volkswagen Beetle. “It ultimately reminded me of catching a chairlift.”

Brin declined to specify whether Google intended to build and sell the cars itself, saying only that the company would “work with partners”.

The driverless cars are currently limited to a maximum speed of 25 miles (40 km) an hour, but Brin said there was no reason the cars could not go as fast as 100 miles an hour or more once they had been proven to be safe.

The front of the cars contain about 2 feet (61 cm) of foam and the windshield is made out of plastic instead of glass to make the cars safer, he said.

“Within a couple of years I hope we will surpass the safety metrics we’ve put in place, which is to be significantly safer than a human driver, and we will start testing them without drivers and hopefully you’ll be able to utilize them at some limited cities,” Brin said.

A handful of US states, including California and Nevada, have passed legislation to allow testing of self-driving cars on public roads. Brin said he was optimistic that the new, passenger-only self-driving cars would be approved for testing in the US and overseas in the future. —Reuters
Merkel’s hesitation on Juncker opens race for EU Commission

While Merkel did not rule Juncker out after talks with EU leaders on Tuesday, she acknowledged there was opposition to his candidacy and said a range of top EU jobs could only be decided in negotiations running until late June. The European People’s Party, the EU’s centre-right political movement of which Merkel’s party is a core member, won the most seats in European Parliament elections and is firmly backing Juncker to become Commission president.

“I am a member of the EPP. We nominated Jean-Claude Juncker ... The entire agenda can be implemented by him, but also by many others,” Merkel said, choosing her words carefully as reporters peppered her with questions. “But I still have to respect the treaty.”

Her reference to the treaty is heavily laden. It says the 28 heads of state and government must agree on a candidate by a “qualified majority”, which effectively means all but a handful agreeing.

But with British Prime Minister David Cameron openly opposed to Juncker, who he regards as an old-style European federalist, and countries like Sweden, the Netherlands, Finland and some in eastern Europe and the Baltics sharing Britain’s concerns, it is not clear there is majority support for the Luxembourger.

Luxembourg Foreign Minister Jean Asselborn said EU leaders had caved into Britain over Juncker’s candidacy and called Tuesday’s informal summit “sobering, verging on pathetic”.

The treaty also says EU leaders must nominate someone “taking into account” the results of the European elections. It does not say they must nominate the candidate chosen by the party that won the European elections.

The only obligation on leaders is to ensure that whoever they pick comes from the centre-right EPP family. The nominee must then be approved by parliament.

If Juncker is dropped over the coming weeks—or perhaps given another job such as president of the European Council, who chairs EU summits—plenty of other names are already circulating for the Commission presidency.

The person who is eventually picked for arguably Brussels’ most powerful job will go a long way to indicate how genuine the EU is about moving in a new direction prioritising shared values, while the leaders say is necessary to win voters back. —Reuter

Venezuela government accuses opposition leader of ‘coup’ plot

CARACAS, 29 May — Venezuelan officials on Wednesday accused hardline opposition leader Maria Corina Machado of leading plots to topple President Nicolas Maduro in league with US officials.

The allegations are the latest in a torrent from the government, which says three months of protests this year were a veneer for US-backed conspiracy to unseat the successor to late socialist leader Hugo Chavez.

Opposition leaders deny and deride those accusations as a smokescreen for a struggle for government, saying the demonstrations, in which 70 people died, were a spontaneous response to economic hardship, insecurity and state repression.

Maduro’s top officials lined up for a much-touted news conference, which all local broadcasters were required to carry live, to denounce Machado and other opposition figures for “assassination” and “coup” plots against the government.

They also accused US envoy to Colombia, Kevin Whitaker, of being involved and in touch with Machado. A spokeswoman for the US Embassy in Colombia did not immediately respond to requests for comment.

Machado, 46, who was instrumental in calling Venezuelans onto the streets for three months of demonstrations against Maduro this year, scoffed at the accusations as “inflammatory” on Twitter.

Rodriguez, a psychiatrist as well as a political opponent, showed iPad screenshots of various emails he said were from Machado, showing language typical of “serial killers.”

“At the moment we need to clean up this rubbish, starting at the top, taking advantage of the global climate with Ukraine and Moldova, as soon as possible,” read one.

“The time has come to join forces, make the necessary calls and obtain the funds to annihilate Maduro.”

Machado and another opposition leader, Leopoldo Lopez, were the main proponents of the protests that began in February.

Lopez was jailed in mid-February and his wife, Lilian Tintori, who is also close to Machado, met with the Venezuelan president on Wednesday during an international tour to garner support for her husband.

Three generals and an army captain were also imprisoned in March on charges of “coup” plots.

Tanker hit by explosion in Seto Inland Sea, one missing

KURE, 29 May — A fuel tanker captain is missing and four crew members sustained severe injuries following an explosion aboard the vessel on Thursday morning in the Seto Inland Sea off Himeji, Hyogo Prefecture, in western Japan, the Japan Coast Guard said.

Seven crew members were rescued, but boat-swam Yoshimitsu Naka, 61, one of the four injured crew, was listed in critical condition, according to the coast guard. The ship’s captain, Masachio Ando, 64, is missing. The 998-ton Shoko Maru was anchored about 5 kilometres off Himeji port when the explosion occurred around 9:20 am, the coast guard said, adding that the vessel did not have oil in its storage at that time. A fire apparently occurred aboard the tanker when a crew member was trying to grind off rust on an oil storage tank with a machine tool, according to the Fire and Disaster Management Agency. Much of the ship’s pressure hull was burned and blackened due to the explosion.

The Japan Transport Safety Board sent three investigators to the scene of the explosion. The tanker left Hiroshima Prefecture on 22 May and unloaded about 2,000 kilolitres of heavy fuel oil at a power station in neighboring Hyogo the following day, according to the Japan Coast Guard.

Photo taken from a Kyodo News helicopter shows black smoke rising from the tanker Shoko Maru, while firefighting is under way, in the Seto Inland Sea off Himeji, Hyogo Prefecture, in western Japan, after an explosion aboard the vessel on 29 May, 2014. Kyodo News

EU sends soldiers to help in relief operations after Bosnia floods

SARAJEVO, 29 May — Around 400 soldiers from Slovenia and Austria, who will be joined by the United Kingdom will join the EU peacekeeping mission in Bosnia this week to help conduct relief operations following the worst floods in living memory to hit the country, EUFOR said on Wednesday.

More than 50 people were killed by flooding and landslides in Serbia, Bosnia and Croatia. The heaviest rainfall in more than a century had caused rivers to burst their banks, sweeping away roads, bridges and homes.

EUFOR took over from NATO in 2004 military implementation of the Dayton peace accords, which ended Bosnia’s 1992-95 war.
China, Malaysia industrial parks under construction

NANJING, 29 May — More than 6.2 billion yuan (about 1 billion US dollars) has been pumped into the construction of an industrial park jointly built by China and Malaysia as part of an ambitious plan to rejuvenate the ancient maritime Silk Road. The China-Malaysia Qinzhou Industrial Park in south China’s Guangxi Zhuang Autonomous Region has invested over 1.2 billion yuan on roads, sewage disposal plants, water and power supply as well as housing projects for workers since construction started in April 2012.—Xinhua

US author, poet, rights activist Maya Angelou dies at 86

Washington, 29 May — American author and poet Maya Angelou, whose groundbreaking memoir “I Know Why the Caged Bird Sings” earned her international acclaim with its unflinching account of rape and racism in the segregated South, died on Wednesday at age 86.

The prolific African-American writer, known for her lyrical prose and regal speaking voice, died quietly at her home in Winston-Salem, North Carolina. Angelou’s family said in a statement. No cause of death was given.

Major League Baseball had planned to honor her in Houston on Friday as part of the Civil Rights Game festivities, but Angelou announced last week that she would be unable to attend due to health reasons.

Angelou, who was also a civil rights activist, playwright, actress, singer, dancer and professor during her varied career, penned more than 30 books and won numerous awards, including the country’s highest civilian honor, the Presidential Medal of Freedom, from President Barack Obama in 2011.

Her latest work, “Mom & Me & Mom,” about her mother and grandmother and what they taught her, was released last year. In her last tweet on 23 May, Angelou said, “Listen to yourself and in that quietude you might hear the voice of God.”

Literary and entertainment figures, politicians and fans mourned her passing on Wednesday.

Obama said his sister, Maya, was named for the author, whom he called “a brilliant writer, a fierce friend and a truly phenomenal woman.”

“A childhood of suffering and abuse actually drove her to stop speaking — but the voice she found helped generations of Americans find their rainbow amidst the clouds, and inspired the rest of us to be our best selves,” Obama said in a statement.

Media mogul Oprah Winfrey, who frequently threw lavish birthday parties for Angelou and considered her a mentor, said she would remember her friend most for how she lived her life.

“She moved through the world with an unshakeable calm, confidence and a fierce grace,” Winfrey said.—Reuters

Coldplay tops Billboard album chart with year’s best sales week

Los Angeles, 29 May — Coldplay’s new album topped the Billboard 200 album chart on Wednesday in its opening week, notching the highest weekly sales by any artist so far this year and scoring the British rock group its fourth No 1 album on the chart. “Ghost Stories,” the sixth studio album from the quartet fronted by Chris Martin, sold 385,000 copies in the United States last week, according to figures compiled by Nielsen SoundScan. That beat country singer Eric Church’s February release, “The Outsiders,” for the top US sales week this year by nearly 100,000 copies. Downloads accounted for 64 percent of total sales for “Ghost Stories,” Billboard said.

Country singer Brantley Gilbert’s “Just As I Am” debuted at No 2 on the chart with sales of 211,000 copies. Michael Jackson’s posthumous release, “Xscape,” fell to third from second, while the hit soundtrack to Disney’s $1.2 billion-grossing animated film, “Frozen,” held at No 4. Last week’s top album, The Black Keys’ “Turn Blue,” dropped to No 5.

New releases in the top 10 this week include singer-songwriter Phillip Phillips’ “Behind the Light” at No 7 followed by the soundtrack to the film “The Fault in Our Stars” at No 8.—Reuters

Prankster hits Brad Pitt in the face at “Maleficent” premiere

Los Angeles, 29 May — An infamous red carpet prankster struck actor Brad Pitt in the face as he signed autographs at the Hollywood premiere of a film starring his partner Angelina Jolie on Wednesday, police said. Pitt, a Golden Globe-winning actor, was at the premiere of “Maleficent,” at the El Capitan Theater in Hollywood, California, when Vitalii Sediuk leaped over a fence and hit him, said Los Angeles Police Department spokesman Gus Villanueva.

Pitt was not seriously hurt and authorities quickly arrested for misdemeanor battery and remained in police custody on Wednesday night, Villanueva said. Sediuk is now being held pending payment of $20,000 bail.

“The officers who were handling him said it looked like it was intentional, but at this point, it remains to be determined,” said Sergeant Leonard Calderon for LAPD Hollywood.

Sediuk did not appear to be armed at the time of the attack on Pitt, and investigators have not yet determined a motive, said Villanueva, adding that he was likely to be arraigned on Thursday.

“Maleficent” is Disney’s modern reimagining of the “Sleeping Beauty” fairytale, and Jolie stars as its villain.—Reuters

Justin Bieber, Kylie Jenner spotted out for dinner?

Los Angeles, 29 May — Reality TV star Kylie Jenner has been spotted having dinner with teen pop sensation Justin Bieber.

Cherry blossoms blooming earlier due to global warming: US EPA

WASHINGTON, 29 May — Cherry blossoms near the Potomac River in Washington are reaching their peak bloom date around five days earlier than they were 90 years ago due to global warming, the US Environmental Protection Agency said on Wednesday.

While the peak bloom varies from year to year, the date for the average year has moved up, the agency said. The schedule of the National Cherry Blossom Festival, which draws more than 1.5 million visitors every year, could in the future be affected as a result, it added.

The peak bloom date is defined as the day 70 percent of blossoms are in full bloom, according to the EPA. Cherry blossoms in the US capital got their start from saplings sent from Tokyo in 1912, with approximately 3,800 planted around the Tidal Basin.

While the average peak bloom date during the past 90-odd years is 4 April, it has become unexceptional that the peak comes in March since the start of the 1990s. This year’s peak, however, fell on 10 April due to the effects of an extremely cold winter in the eastern United States.

File photo taken in April 2014 shows cherry blossoms in Washington, with Washington Monument seen in background. On 28 May, 2014, the US Environmental Protection Agency said cherry blossoms near the Potomac River in Washington are reaching their peak bloom date around five days earlier than they were 90 years ago due to global warming. — Kyodo News

Pakistan Taleban splits as divisions grow within insurgency

PARACHINAR, (Pakistan) 29 May.— The Pakistani Taleban split into two groups on Wednesday, highlighting growing divisions within the movement and diminishing the government’s chances of finding a negotiated settlement with the insurgency. The split is between two rival groups from the powerful Mehshid tribe which provides the Taleban’s bulk of their money and fighters from its base in the South Waziristan region.

The breakaway group is in favour of peace talks with the government while the main insurgency has announced that it will continue attacks against government and security targets. “The (Taleban’s) present leadership and fighters have become a band of paid killers involved in un-Islamic activities like killings, robberies, extortion and kidnappings for ransom,” Azam Tariq, a spokesman for the breakaway faction, told Reuters. The Taleban leadership could not be reached for comment.

The Pakistani Taleban has split three times before but allied with the Afghan Taleban — it is already fractured, a loose union of groups who often fight with each other.

Manchester United, Tampa Bay Buccaneers owner Malcolm Glazer dies at 85

MIAMI, 25 May — Malcolm Glazer, a recluse self-made billionaire and patriarch of the family that owns the NFL’s Tampa Bay Buccaneers and the Manchester United soccer club, died on Wednesday, the team said. He was 85.

Glazer, who as a teenager sold watch parts from a suitcase before building a wide-ranging business empire, bought the Buccaneers in 1995 for a then-NFL record of $192 million. He later persevered with the purchase of Manchester United, one of England’s most-storied soccer teams in 2005, a deal that fueled controversy because of its debt-driven financing.

However, Glazer was largely sidelined in recent years from both the teams’ business dealings by a series of strokes.

After his purchase of the Buccaneers, he led what had traditionally been one of the weakest teams in the National Football League to its first Super Bowl championship in 2003. “A dynamic business leader, Glazer helped mold the Buccaneers into a model franchise and one respected league-wide,” the Buccaneers said in a statement on their website.

His supporters credited him with spending big to hire players and a coaching staff to turn around a team in one of the NFL’s smallest markets.

While the team has struggled on the field recently, Glazer’s investment has proved profitable and the business magazine Forbes estimates it is now worth more than $1 billion.

His death is unlikely to lead to any ownership change, according to a statement by the Buccaneeers. The family’s “long established estate succession plan” means the team “will remain with the Glazer family for generations to come,” the team said.

Glazer raised his profile in 2005 with an aggressive $1.47 billion takeover of Manchester United that was widely opposed by many of the club’s fans.

“Fans, under the banner ‘loveUnitedhateGlazer,’” argued the debt built up in the deal would hurt the club and force supporters to pay higher entrance fees.

Glazer went on, however, to preside over one of the most successful eras in the club’s storied history. “The thoughts of everyone at Manchester United are with the family tonight,” the team said in a statement.
Serena Williams of the US and Garbine Muguruza of Spain react during their women’s singles second round match on day 4 of the French Open at Roland Garros in Paris on May 28, 2014.—Xinhua

PARIS, May 29 — Serena Williams was caught cold at the French Open on Wednesday by a Spanish 20-year-old who trounced the defending champion 6-2, 6-2 in the second round to provide the shock of the tournament.

The American’s defeat by Garbine Muguruza came an hour after her elder sister Venus was shown the exit by another youngster, 19-year-old Anna Schmiedlova of Slovakia, a defeat which ruined the chance of possibly the last defeat which ruined the American tennis. The top men, Novak, Rafael Nadal, the Spanish, ranked No. 1 in the world, won 17 major titles. Her serve was broken twice early in the first set and she looked leader-footed as she was kept on the move by Muguruza.

The Spaniard, ranked 35 in the world, did not release the pressure for the full 64 minutes and the match became a repeat of the nightmare of 2012, when Williams lost in the first round, not the glory of 2013 when she beat Sharapova in the final.

“I don’t think anything worked for me. It was just one of those days, you can’t be on (your game) every day,” said Serena. “It’s not the end of the world, there’s always next year.”

The world number one said she was proud of Muguruza, who leap about the court in ecstasy after the final point.

“IT’S AMAZING,” Muguruza said. “I had to be really aggressive and focused.

“Today is a great day, I’m so happy,” the Spaniard said. “Today is a great day, I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’m so happy,” the top seed in the world said. “I’
