HEALTH SYSTEM TRANSFORMATION IN MYANMAR: ARE THE CURRENT CHANGES PROMISING?

Phyu Phyu Thin Zaw, MBBS, PhD
Visiting Scholar/WHO-HRP Career Development Fellow
Asia Health Policy Program
Shorenstein-APARC

5/26/2015
Outline

- Myanmar profile
- Myanmar’s current health status
- Myanmar Health System
  - Overview
  - Comparison with South East Asian countries
- Equity of access to Reproductive Health services
- Current Changes in Myanmar Health System
- Conclusions and Recommendations
MYANMAR/Burma

Country Profile

Official Name: Republic of the Union of Myanmar
Population: 51.9 million
Rural Population: 70%

Administrative Division
• 7 Regions
• 7 States
Area: Slightly smaller than the U.S. state of Texas.
Neighbors: China, India, Thailand, Bangladesh and Laos
  ❖ Once South East Asia’s wealthiest nation

Politics
❖ Was the second most isolated country next to North Korea from 1962 to 2012
❖ In a transitional period after 63 years of military regime
❖ Increased transparency
❖ More freedom of speech, moderate media freedom
❖ Some positive approaches

(Ref: 2014 census, WHO 2011)
Ethnicity

- Over 130 ethnic groups with 8 major groups
- Internal Conflicts: One of the longest civil wars
- Abundant natural resources: 2nd lowest Human Development Index in Asia Pacific Region
Beautiful Myanmar

Overall Health Status

1. Life Expectancy
2. Maternal Mortality
3. Infant Mortality
4. Prevalence of Communicable Diseases (HIV/TB/Malaria)
5. Prevalence of Non-communicable diseases
Life expectancy in Myanmar
Male: 63.4
Female: 67.1
Total: 65.2
2. Maternal Mortality

- **200 per 100,000 live births**
- **Three quarters** of all maternal deaths occur:
  - Delivery
  - Immediate post-partum period
  - Low access to essential maternal health services
3. Infant Mortality Rate (per 1,000 live births)

- IMR: 48 nationally; 94.2 in the east
- Under Five Mortality Rate:
  - 62 nationally
  - 141.9 in the east
- Highest in Southeast Asia

UNICEF report 2013

Data from World Bank | Last updated: Apr 17, 2015
Rural-Urban Difference

Source: Ministry of Health, Myanmar
4. Communicable Diseases: HIV/TB/Malaria

- High burden of CD: tuberculosis (TB), malaria and HIV/AIDS
- Top three national priority diseases of Myanmar (MOH, 2013)

Global Tuberculosis report WHO-2013; Beyrer 2006
Number of HIV-infected Youths in SEAR (2013)

Data from World Bank   Last updated: Apr 17, 2015
5. Non-Communicable Diseases

Five Risk Factors
1. Dietary risks
2. Tobacco smoking
3. Household air pollution from solid fuels
4. High blood pressure
5. High fasting plasma blood sugar

(IHME, 2010)

MYANMAR HEALTH SYSTEM
PAST AND PRESENT
Colonial Period: British Health System

After independence: Health System was temporarily interrupted

Military Regime
- Lack of government investment in healthcare
- Restriction of NGO provision of health services

Democratization Period

✓ Eradication of smallpox 1977
✓ Elimination of leprosy, trachoma, poliomyelitis, and iodine-deficiency disorders

Source: Asia Pacific Observatory on Health Systems and Policies
Myanmar Health System in General

- A pluralistic mix of public and private systems both in financing and provision

The WHO Health Systems Framework
1. Leadership

Union Minister for Health

Ministry of Health

Deputy Minister

Deputy Minister

Permanent Secretary Office

Department of Medical Care

Department of Medical Research

Department of Public Health

Department of FDA

Department of Traditional Medicine

UN Agencies, Bilateral, INGOs, ...

Regional Minister

Other Ministries

National Health Policy
National Health Plan
Myanmar Health Vision 2030
Rural Health Development Plan

National NGOs, Private Sector

Department of health professional Resource development and management

Department of Medical Care

Department of Medical Research

Department of FDA

Department of Traditional Medicine

UN Agencies, Bilateral, INGOs, ...
2. Health Financing

- The government used to be the main source of financing
- Private out-of-pocket (OOP) payment became the main source of finance: cost sharing in 1993
- Total health expenditure in Myanmar: 2.0–2.4% of its GDP between 2001-2011
- The lowest among countries in the World Health Organization
- Donor contributions remain substantial, at 7% of total health expenditure in 2011 (half what the government spends on health).

Out of Pocket Health Expenditure

- Nearly 100% of private health expenditure (2001-2011)
- Over 30% of households encountered catastrophic health expenditure

(MOH & UNICEF unpublished information, 2012)

Data from World Bank  Last updated: Apr 17, 2015
Health Insurance System

- No health insurance system at all in Myanmar
- Social security system: established in 1956
  - For insured workers who are employed in the private sector
  - For enterprises having more than five employees
  - Benefits: free medical care during illness, payment of 75% of basic salary during maternity leave, full salary for one year for severe injuries, cash payments for death and injury, and survivors’ pension
- The scheme covers less than 1% of the population

Source: Asia Pacific Observatory on Health Systems and Policies
3. Human Resources and Infrastructure

- **The Department of Medical Science**: doctors, nurses and health care workers
- **Density of physicians**: 0.501 per 1000 population
- It was still **far below the global standard** of 2.28 health workers per 1000 population
- **Underproduction** of dental surgeons, pharmacists and technicians as compared to doctors and nurses.
- **Limited registration for foreign doctors** to work in Myanmar

*Source: Ministry of Health, Myanmar, unpublished data*

Data from Human Development Report 2014, United Nations Development Programme  Last updated: Jul 21, 2014
Number of Nurses and Midwives Per 1000 Population (1990-2010)

Hospital Beds Per 10,000 Population in SEAR

- Timor Leste: 5.9
- Nepal: 5.0
- Viet Nam: 3.1
- Thailand: 2.1
- India: 0.9
- Cambodia: 0.8
- Lao People’s Democratic Republic: 0.7
- Indonesia: 0.6
- Myanmar: 0.6
- Bangladesh: 0.3

[http://apps.who.int/gho/data/view.main.1860]
Inequities in Distribution of Health Care Facilities

- Looking at the distribution of health care facilities and beds across the country, inequities are evident.
- A discrepancy index lower than 1.0 means that a region or state has fewer beds per 1000 population than the national average (1.0).

Source: Health Management Information System, Department of Health Planning, MOH [4 July 2013]

Scatter plot showing discrepancy index of hospital beds and hospital utilization
4. Essential Medical Products and Technologies

**Essential Medicine List**

- The Myanmar Essential Drugs Programme has revised the National List of Essential Medicines
- The Central Medical Store Depot (CMSD) procured a subset of 92 medicines from the essential medicine list in 2010
- The Ministry of Finance did not provide enough funds to procure all the needed essential medicine (Holloway, 2011)

Ministry of Health, Myanmar, unpublished data
Medical Equipment

- General radiography (e.g. X-ray machines) represents as most basic equipment available at township and station hospitals across the country.
- Computed tomography (CT) was only available in Yangon and Mandalay General Hospitals until 2012.
- Five magnetic resonance imaging (MRI) scanners are operated in big cities.
- There is a need to strengthen regular maintenance mechanism of medical devices.

Source: Asia Pacific Observatory on Health Systems and Policies
5. Health Information System

- Comprises hospital information, public-health information, human-resources information and logistical information
- Data are collected manually by individual using standardized forms
- Dissemination of statistics: an annual public health statistics report
- Due to lack of adequate resources and capacity, population-based surveys could not be carried out as frequently as needed

Information Technology

Trends in Internet Users in Government Sector and General Public

Source: CSO [2012].
6. Service Delivery

- Rural Area:
  - Village Volunteers or Midwives
  - Traditional Medicine
  - Rural Health Center
  - Station Hospital

- Urban Area:
  - Urban Health Center
  - Small clinics run by GPs
  - Traditional Medicine Clinics
  - Private Hospital
  - District Hospital
  - Township Hospital
  - Public Tertiary Hospital

- Primary Care
- Secondary Care
- Tertiary Care
International Ranking

- **Second worst** in terms of ‘overall health system performance’ by the WHO in 2000
- OOP payment is **the highest** in the world, at 81% of total health expenditures
- Estimated three-quarters of Myanmar’s citizens find themselves with **very limited access** to essential health services

World Bank (2012)
Equity of Access to Reproductive Health Services Among Youths in Poor Communities of Mandalay City

Phyu Phyu Thin Zaw, Tippawan Liabsueltrakul, Edward McNeil, Thein Thein Htay

Mandalay city
- Population: nearly 1 million
- Estimated 10 ‘resource-limited’ suburban communities
- 50,000 living in ‘resource-limited’ suburban communities

Urban ‘Poor’ Communities
- Overcrowding
- Poor housing and low socio-economic status
- Unemployment, violence, crime
- Poor schooling facilities
- Poor maternal outcomes
Methodology

Study Design
Community-based cross-sectional study
Part I: Quantitative methods
Part II: Qualitative methods

Study setting
All resource-limited suburban communities in Mandalay city
Data collection at one of the Polakee Communities
I really want to go to school.

During data collection at one of the Polakee Communities
Outcome Measure: Accessibility to RH Services

The most appropriate method of measurement of accessibility was used.

- Cost of transportation < 50 cent
- Cost of services < 1 US$
- Time to reach the nearest center < 30 min
- At least 1 RH service center within 1 mile and aware that the service exists
- Self-perceived affordability

Financial accessibility

Geographical accessibility

High accessibility = All criteria met
**Accessibility to Reproductive Health Services**

- Geographical accessibility (79%)
- Financial accessibility (19%)
- Overall, only 34% were able to access at least one RH service centre within 30 minutes walk at an affordable cost and were aware that the service existed.

Logistic regression analysis adjusting all confounding factors OR: Odds Ratio; CI: Confidence Interval
Recent Changes in Myanmar Health System (2011-2015)
1. Increased in Government Health Expenditure

- Significant increase in health expenditures, which raise the share of GDP allocated to health
  - From 2.4% in 2012 to 3.14% in 2013 and 3.82% in 2015
  - Nine fold increase from 2011 to 2015
  - Share of Public Health Expenditure in Total Health Expenditure from 20% to 34%
- Focus on medicines, medical equipment, and building infrastructure for health insurance
- Level of health investment is still low compared to the demand for health care
- Still the lowest compared to other countries in SEAR
Department of Health’s State and Region Budget Allocation

Source: Department of Health Planning, Ministry of Health, Myanmar
2. Actions towards Universal Health Coverage in 2030

- The Social Security Law (August 2012)
- Full medical reimbursement for every civil servant (Civil Servant Medical Benefit Scheme) in 2016
- Expansion of payroll tax financed social health insurance for formal sector (private and civil servant)
- Development of new social protection policy (2014) to provide health and social benefit for informal sectors
- Stakeholders’ meetings for development of feasible private health insurance for affordable population

Department of Health Planning, MOH
How to cover the informal sectors

Three mechanism to cover this informal sector:

- Full contributions by members (the Philippines)
- Partially subsidized by the Government either central or local (Vietnam, China)
- Covered by tax financed scheme (Thailand)
3. Health Infrastructure and Human Resources

- **Human Resources for Health Master Plan**: prepared in 2012 for the next 20–30 years
- **Appointing new health care workers**:
  - Many professionals graduated, but were not employed by the government.
  - Over 28 000 registered medical doctors: about 12 000 were employed by public agencies
- Increased **salary**: Doctors *(from 150 US$ to 250 US$)*
- **Expansion of hospitals and beds** provision
- **30 CT scanners** by the end of 2013: available in the general hospitals of all region and state Hospitals.
- Supplied **essential drugs** to the hospitals *(Quick-Win approaches)*

*(MOH, 2013)*

Data showing percent growth of hospital (%)

- Ayeyarwaddy Region: 29.9%
- Sagaing Region: 22.1%
- Magway Region: 18.8%
- Taninthayi Region: 18.5%
- Kayin State: 15.9%
- Kayah State: 15.4%
- Bago Region: 14.8%
- Rakhine State: 13.9%
- Shan State: 11.9%
- Mon State: 10.3%
- Yangon Region: 10.1%
- Kayah State: 3.6%
- Mandalay Region: 0%
- Chin State: 0%

Number of Hospitals

- 2004-2005
- 2012-2013
4. Increased International Collaborations

- Collaboration with various actors in Health Sector since 2011
- The Three Millennium Development Goals (3MDG) Fund started in 2013
- Many other international nongovernmental organizations (INGOs) (e.g. PATH, MSI, Save the Children, World Vision, Oxfam, Medecins Sans Frontieres, AMDA, ADRA, CARE International, Burnet Institute, Merlyn, Malteser)
- Working separately to finance specific health-development programmes
Health-care systems are diverse in SEAR
- Range from dominant tax-based financing to social insurance and high Out-of-pocket OOP payments
- Government spending is generally low in ASEAN, except Thailand and Brunei
- Singapore’s health system is the best based on international assessments
- Thailand’s Universal Health Coverage: the most successful story reaching the poor (98% coverage)
- Increased government health spending: the more significant gains

Source: Stephan Lock, Global Practices, 2013
Summary 1

- Myanmar is facing a **very important transitional period**
- 82% of total health spending in Myanmar is out-of-pocket, the **highest** in the world
- The recent increase in government spending for health is encouraging; however it is **not sufficient**
- **Social Protection System** is in the developmental stage
- **Financial-risk protection** for the majority of the population who are poor and from informal sectors is still lacking
Summary 2

- **Human resources** for health are constrained
- **Job satisfaction** among health care provider is unsatisfactory
- **Inequities in distribution** of the health workforce, particularly at the most peripheral level of the system
- Very **weak health information system**
- **A large influx of international development partners** and donor funding
Conclusions and Recommendations

1. **Equity** of access to health care: of vital importance
2. **Government commitment**: more investment in health
3. **International aid**: adhere to the Paris Declaration on Aid Effectiveness
4. The country’s future healthcare advancements will most likely stem from the **private sector**: appropriate policies should be considered
5. No major **evaluation or impact study** has been carried out so far specifically linked to these reforms and such studies are strongly suggested
