Second Pyithu Hluttaw’s tenth regular session holds sixth-day meeting

THE tenth regular session of the Second Pyithu Hluttaw held its sixth-day meeting at the Amyotha Hluttaw hall yesterday morning. The Deputy Minister for Health and the ministry is coordinating to obtain a loan from JICA (Japan International Cooperation Agency). During fiscal year 2018-2019 to fiscal year 2020-2021 consultants will conduct site visits and draw up designs. Tender will be called in fiscal year 2018-2019 to conduct design work while tender for construction work will be called in fiscal year 2019-2020 explained the Deputy Minister.

Similarly questions raised by Daw Khin Than Nu of Meldon constituency, Daw Khin Saw Wai of Yathedaung constituency and U Sai Oo Kham of Hseinwi constituency were answered by Deputy Ministers.

Motion urging Union Government to value add agri and livestock sector raw products

Following the question and answer session, Daw Cho Cho of Ottwin constituency tabled a motion urging the Union Government to value add raw materials produced from agriculture and livestock breeding sector and expand into international market. She also explained about the reason for tabling the motion. The motion was supported by U Tin Htoo of Waw constituency.

Pyithu Hluttaw Speaker U T Khun Myat announced the Hluttaw’s consensus to discuss the motion after obtaining the decision of the Hluttaw and announced further for Hluttaw representatives who want to discuss the motion to register their names.

Reading of Economic and Financial Development Committee Report

Next Pyithu Hluttaw Economic and Financial Development Committee report was read by committee member Dr. Kyi Moh Moh Lwin.

Pyithu Hluttaw Speaker U T Khun Myat announced for Hluttaw representatives who wish to discuss the report to enroll their names.

Hluttaw approves bill on farmer rights

Later Pyithu Hluttaw Speaker announced the Hluttaw’s approval of a Bill amending the Law of Protection of the Farmer Rights and Enhancement of their Benefits a Second Term sent by Amyotha Hluttaw with amendments after obtaining the Hluttaw’s decision.

As the bill was approved according to the approval by Pyithu Hluttaw Bill Committee and not as amended by the Amyotha Hluttaw, Bill Committee member U Haing Ngwe then tabled a motion for the matter to be submitted and discussed at Pyidaungsu Hluttaw because the two Hluttaws were in disagreement over the bill.

Afterwards Pyithu Hluttaw Speaker announced that the matter will be submitted to Pyidaungsu Hluttaw in order to discuss the disagreements between the two Hluttaws.

The seventh-day meeting of the Second Pyithu Hluttaw’s tenth regular session will be held today it is learnt. – Aye Aye Than (MNA) (Translated by Zaw Min)

Second Amyotha Hluttaw’s tenth regular session holds sixth-day meeting

THE sixth-day meeting of the Second Amyotha Hluttaw’s tenth regular session was held at Pyithu Hluttaw meeting hall in Nay Pyi Taw yesterday morning where asterisk-marked questions were asked, a motion tabled, a report read, a bill decided upon and approved.

Question and answer session

The first question about distribution of electricity to Tamu Township through the national power grid was raised by U Naing Naing Win of Mon State constituency and answered by Deputy Minister for Electricity and Energy Dr. Tun Naing who first remarked that the reply will be for his ministry as well as in coordination with Sagaing Region government. The Deputy Minister said that to provide electricity to Tamu Township from the national grid, a 90 miles long Kayal-Tamu 230 KV power line and a 230 KV sub-station in Tamu Town had to be constructed. This project is included in the Ministry’s Master Plan starting from fiscal year 2017-2018, annual fund included an allocation for the project. But due to limited fund and budget had to be allocated for ongoing projects, this project couldn’t be started to date.

The funding requirement for the project will be Ks 107 billion or US$ 66.6 million in foreign currency. The project is included in Myanmar Sustainable Development Plan and a proposal had been made to Ministry of Planning and Finance to conduct this project under $ 130 million loan from India said the Deputy Minister. On the matter of electricity distribution, U Nay Myo Htet of Kyaikhami town about 15 miles from Yathedaungu constituency and answered by Deputy Minister U Hla Kyaw replied that the reply will be for his constituency 11, U Mya Min Swe of Magway Region constituency 9 asked the Ministry about its plans to construct wards for patients and a housing complex for staff at the Theinzayat Station Hospital in Kyaihkhan Township, Mon State, in 2018-2019 FY. Dr. Mya Lay Sein said funds will be allocated for construction of a one-storey patient ward in the hospital in 2019-2020 FY.

U Mya Min Swe of Magway Region constituency 9 asked whether the government plans to appoint more township medical officers. Dr. Mya Lay Sein replied that vacant positions will be filled to meet the requirements in the region. Afterwards, Dr. Mya Lay Sein replied to a question raised by Dr. Zaw Lin Htut of Mon State Constituency 9 about the reconstruction of a people’s hospital in Thaton District.

Later, Daw Thiri Yadana of Mon State constituency 12 asked if the government plans to build relief housing that can accommodate 1,000 people, with provisions for a power generator, rest rooms, and a pool. The Deputy Minister for Social Welfare, Relief, and Resettlement, U Soe Aung, replied that the Chairman of the National Natural Disaster Management Committee had granted permission for construction of a multi-purpose shelter in Belin Township in Mon State. The Ministry has asked the state government to provide a cost estimate at the earliest, he said adding, a power generator will be supplied for the shelter.
The reason for implementing e-Government is to have efficient and speedy communications between the Government and the public servants. Government and private business persons and the government departments. e-Government has the ability to transform a developing country into a developed country and plays an important role for sustainable development and reducing poverty. Furthermore, e-Government is one of the Development Indicators to measure the development of a country.

e-Government development of countries are measured by the United Nations’ three e-Government Development Indexes which are Online Service Index, Telecommunication Index and Human Capital Index. Looking at Myanmar’s e-Government Index, in 2016 it stood at 189 out of 193 and in 2018, it rises to 157. ICT development is required to be used as a driving force for our country to catch up with other developed countries and to have socio-economic development. In Myanmar also, it can be seen that businesses are using ICT technology to raise the production and service capacities.

The basic infrastructures and network linkages between ministries were established in September. To store data and information of ministries securely and safely, arrangements were made to establish a government data center and specialized technical courses were also being conducted. Some laws required for e-Government were enacted and arrangements were made to draft up and enact a Cyber Law, said the Vice President.

Implementing e-Government requires taking examples and experience of some countries. Similarities can be seen in countries with top-notch e-Governments. First, the Union level, region and state level and regional level governments are using a single National Web Portal to provide services. Second, Action Plans were drawn up based on data and information collected yearly. Next, these were prioritized during the implementation of people centered services desired by the people. Third is using of Digital Identity systems in conducting the works. Therefore our country should also study the good examples and practices of other countries and use the best methods and systems that are nearest to our requirements.

There must be an Open Government first to have a successful e-Government. An Open Government is a government that provides data and information that the citizens have the right to know. It encourages the people’s participation in drawing up policies for the people. In addition to this, added benefits such as creating job opportunities and providing support to businesses will be automatically achieved when people know and use data and information related to them.

Second, there must be a Competent Government. That is why the Government is making it a priority to raise the capacity and quality of the public servants. Third is to share and use news and information. Work efficiency improves when information is shared and distributed as required within government departments and there will be more cooperation among the government departments. Required polices are to be set and enacted so that there is no breach in security when information and data are shared.

Fourth is to become a Service-Oriented Government. To provide good and effective service to the people, priority must be given on enabling the people to use it with confidence and ease. One-Stop Services are to be implemented so that all works can be done at a single place.

Fifth point for e-Government sector development is the requirement of the country’s ICT Industry sector to develop. Only then can dependent on foreign sources for software, hardware and technology can be reduced gradually creating job opportunities for the people.

Today’s event is about a conference and exhibition that is vital for implementing e-Government in Myanmar. At the conference, matters of vital importance for the country and people in e-Government implementing works will be shared and discussed. In addition to this, it would be very useful as ICT exhibits are included where e-Government systems and technologies can be studied. It is strongly believed that the conference will bring forth forces, methods and solutions to continue future works in a sustained momentum.

Many thanks is owed to the e-Government Steering Committee, Ministry of Transport and Communications, Myanmar Computer Federation and association for putting their best efforts toward successfully organizing the event. It is also believed that all understand the e-Government Visions for a successful e-Government system and work towards it. Therefore, union level, state and region level, district level, township level and village level public servants, computer associations, business persons, technicians, experts and citizens are urged to work together towards a successful e-Government system, said the Vice President.

Next e-Government Steering Committee Vice-Chairman Union Minister for Transport and Communications U Thant Sin Maung explained about the status of works conducted to implement the e-Government system successfully and establishment of ICT infrastructures.

Afterwards Myanmar Computer Federation (MCF) Chairman U Khun Oo delivered a message of greetings followed by screening of a video documentary on works conducted for ICT sector development.

Later e-Government Steering Committee Vice-Chairman Union Minister U Thaung Tun and Union Minister Sin Maung. MCF Chairman U Khun Oo, Huawei Co., Ltd. CEO Mr. Liman Zhang and Ease Net Co., Ltd CEO U Kyaw Moe Naing cut the ceremonial ribbon to open the e-Government Conference and ICT Exhibition 2018 (Nay Pyi Taw).

Vice President U Myint Swe and attendees then posed for a commemorative group photo and visited the exhibits displayed to commemorate the e-Government Conference and ICT Exhibition 2018 (Nay Pyi Taw).

Later in the afternoon the second part of the ceremony was held where talks under the titles of “Road to Digital Myanmar” and “Technology Perspectives” were conducted.

The e-Government Conference and ICT Exhibition 2018 (Nay Pyi Taw) will be held until 28 November, it is learnt.

DFID, WWF announce $2.4 mlн investment in Myanmar to support sustainable rubber production globally

THE DoNa Facility, a UK Government Department for International Development (DFID) funded programme, and the World Wide Fund for Nature (WWF), the world’s leading independent conservation organisation, yesterday announced a joint investment of over US$2.4 million in an innovative project in rubber production in Taninthayi Region.

The project, focused on supporting environmentally, socially, and commercially sustainable rubber production in Taninthayi, Myanmar, has a long-term goal that the region, as part of the WWF initiative, provides a replicable business model in sustainable and traceable rubber.

Speaking at the launch Tom Coward, Team Leader of the Inclusive Growth and Livelihoods Unit for DFID in Myanmar, said: “It is exciting to be launching this project with WWF and to see this project with WWF and to see the significant transformative potential of producing rubber sustainably in Myanmar.

With Myanmar the seventh largest rubber producer in the world, this project has huge potential to improve the livelihoods of poor farmers, while also promoting the feasibility and profitability of ‘zero deforestation’ sustainable rubber.”

The project will be implemented in partnership with Dawei Golden Land Co Ltd (DGL), established in 2017 by the Taninthayi Rubber Planters and Producers Association (TRPPA), a proactive actor in the sector determined to break the cycle of low quality and low pricing of rubber.

“Rubber production in Myanmar has caused deforestation and displaced communities from their customary land. A shift towards sustainable rubber production will ensure that there is no further deforestation, no land grabbing, and no human rights violations.”

A shift towards sustainable rubber production will ensure that there is no further deforestation, no land grabbing, and no human rights violations.

The project will work with 250 smallholder producers to increase their income by up to 30%.

“A new rubber factory that ensures efficient and low-cost latex processing, low quality products, and low pricing, making Myanmar dependent on the cut-price markets last fiscal year.

Myanmar is the world’s seventh largest rubber producer and rubber is one of the country’s biggest exports. Yet, the sector is stuck in a cycle of low yields, poor processing, low quality products, and low pricing, making Myanmar dependent on the cut-price market.”

Authorities release six-feet-long crocodile in Mon State

OFFICIALS From the Department of Forestry and Fisheries Department released a crocodile back to its habitat yesterday, two days after the reptile was seized by fishermen in the Khawa Creek in Makyi Village, Ye Township.

The six-feet long crocodile got caught in a fishing net on 25 November. Fishermen seized it and handed it to Ye Township’s Forest Department on 26 November. The crocodile was released into the Kyaumki Creek in Ye Township yesterday.—Township IPRD

**GROWERS IN KYAUKSE GET GOOD PRICES FOR SESAME**

SESAME growers from Kyaukse Township, Mandalay Region, said they have continued to make a good profit this harvest season. This year, sesame growers were facing losses due to a poor harvest caused by bad weather. However, a growing demand has helped fetch a good price for the crop.

Sesame is mainly grown in the wet season. Growers in Kyaukse Township chiefly cultivate black and white sesame. At present, a basket of black sesame is fetching Ks30,000, while a basket of white sesame is fetching Ks60,000 in the domestic market, said U Soe Naing, a sesame grower from Yebawgyi Village.

The price of sesame seeds has increased this year compared from previous years, he added.

Sesame seeds, counted among profitable export products, are widely consumed not only in Myanmar, but also in other countries. Sesame seeds are mostly used as a garnish, as an ingredient in some foods, and a snack on their own. A popular sesame product is sesame oil, which is an edible vegetable oil derived from sesame seeds. Due to its health benefits, sesame oil is also used in traditional medicine. —Thet Maung

**Gov’t to implement five-year project under National Plan of Action on Nutrition**

MYANMAR will implement a five-year project from 2018-2019 FY to 2022-2023 FY under the Multi-sectoral National Plan of Action on Nutrition (MS-NPAN) at a cost of Ks289 billion.

The five-year project was announced at the first meeting of the National level leading Committee on Promoting Nutrition in Myanmar and Development Assistance Coordination Unit (DACU), which was held on 26 November at the Novotel hotel in Yangon.

The meeting was attended by Union Minister for Health and Sports Dr. Myint Htwe, officials from the ministries of agriculture, livestock and irrigation; education; and social welfare, relief, and resettlement, donor organizations, UN organizations, and other social organizations.

The MS-NPAN was drawn to address the problem of malnutrition in Myanmar. Its main aim is to reduce malnutrition among mothers, children, and adolescent girls. As part of the plan, a Nutrition Sector Coordination Group was formed in January 2017 under the DACU.

The MS-NPAN covers six sectors which were chosen on the basis of discussions. Under the five-year project, funds will be allotted for four sectors - the Ministry of Health and Sports (Ks204 billion), the Ministry of Social Welfare, Relief, and Resettlement (Ks225 billion), the Ministry of Education (Ks285 billion), and the Ministry of Agriculture, Livestock, and Irrigation (Ks197 billion), and the Ministry of Social Welfare, Relief, and Resettlement (Ks225 billion). —Nyein Nyein (Translated by Khaing Thanda Lwin)
Additional statistical bulletin on drug seizures, acting on information

1. In order to prevent and eradicate the dangers of narcotic drugs and psychotropic drugs, the Office of the President has formed the Drug Activity Special Complaint Department on 26 June 2018 to systematically accept and respond to reports on drug abuses and other related cases from the general public.

2. With orders from the Office of the President, the Drug Activity Special Complaint Department relayed information on reports on drug-related offenses up to 24 November 2018 to the Ministry of Home Affairs to take action, as displayed below:

THE Pyidaungsu Hluttaw Joint Bill Committee held a meeting over an amendment bill to Sea Customs Act and Tax Management Bill, sent by Union Government at the Pyidaungsu Hluttaw Building D, second floor meeting hall yesterday.

The meeting was attended by Pyidaungsu Hluttaw Deputy Speaker, Joint Bill Committee and Joint Public Accounts Committee Chairman U Tun Aung, deputy chairmen, secretaries, joint secretary and committee members from Joint Bill Committee and Joint Public Accounts Committee, Banks and Financial Development Committee Chairman and Secretary, Hluttaw representatives who had discussed the two bills at Pyidaungsu Hluttaw, Pyidaungsu Hluttaw’s Legal Affairs and Special Cases Assessment Commission members, officials from Ministry of Finance and Planning, Union Attorney General Office and Pyidaungsu Hluttaw Office.

Second Amyotha Hluttaw’s tenth regular session...

FROM PAGE-2
Naw Hla Hla Soe of Yangon Region constituency 10 asked the government about the status of the Prevention and Protection of Violence against Women Bill. U Soe Aung replied that the process of drafting the bill has been on since 2014, and a bill committee, leading committee, technical advisory committee, and work committee have been formed for the purpose of drafting the bill. The bill has been sent to the Union Attorney General’s Office, and the government is cooperating with relevant departments and organizations to enact it into law in 2019, he added. Afterwards, Bill Committee member Brig-Gen Tin Lwin read out the Consumer Protection Bill sent by the Pyithu Hluttaw with amendments.

The Amyotha Hluttaw Speaker asked Hluttaw representatives who want to discuss the motion to register their names.

The Hluttaw also conducted a discussion on the bill amending the Settlement of Labour Disputes Law, for the second time, sent by Amyotha Hluttaw with approval. Daw Ei El Pyone of Ayeyawady Region constituency 8 and Dr Khin Ma Gyi of Kachin State constituency 8 participated in the discussion.

The Amyotha Hluttaw Speaker concluded the meeting, with an announcement for further discussions on the bill on 28 November. — Mawsi (MNA) (Translated by Win Ko Ko Aung)
El Niño: 75-80% chance of extreme weather phenomenon in next three months, World Meteorological Organisation warns

UN agency predicts incoming event has previously been linked to droughts, flooding and coral die-offs

By World Meteorological Organization

THERE is a 75-80% chance of an El Niño developing by February 2019, although it is not expected to be a strong event, according to the latest update from the World Meteorological Organization (WMO). Sea surface temperatures are already at weak El Niño levels in parts of the tropical Pacific, although the corresponding atmospheric patterns have not yet materialized.

WMO accompanied the El Niño warning with a global seasonal climate update, which indicated that precipitation patterns predicted for December-February resemble those normally associated with El Niño. In some regions the precipitation response is weak, however, and not in keeping with those typically associated with El Niño.

The El Niño/Southern Oscillation (ENSO) is a naturally occurring phenomenon involving fluctuations of ocean surface temperatures in the tropical Pacific, coupled with changes in the overlying atmosphere circulation. It has a major influence on weather and climate patterns over many parts of the world.

Sea surface temperatures in the east-central tropical Pacific have been at weak El Niño levels since October 2018. However, the atmospheric response has not yet responded to this additional warm, and the upper level winds, cloud and sea level pressure patterns do not yet reflect typical El Niño features.

Model forecasts suggest this will change within the coming month or two. The chance of a full-fledged El Niño between December 2018 - February 2019 is estimated to be about 75-80%, and about 60% for it to continue through February-April 2019.

Model predictions of the strength of the El Niño range from just a neutral condition through to a moderate strength El Niño event, with sea surface temperature anomalies of at approximately 0.5 to 1.2 degrees Celsius above average.

The chance for a strong event (sea surface temperature anomalies in the east-central tropical Pacific rising to at least 1.5 degrees Celsius above average) is currently low.

“The forecast El Niño is not expected to be as powerful as the event in 2015-2016, which was linked with droughts, flooding and coral bleaching in different parts of the world. However, the atmospheric and dynamical processes that were in place in 2015-2016 have not been replicated since that time, and the time has come for us to interpret the situation from an operational perspective,” said Maxx Dilley, director of WMO’s Climate Prediction and Adaptation branch. Scientific progress on the understanding and modelling of ENSO, underpinned by major observational programmes and coordinated research initiatives, has improved operational monitoring and prediction capabilities, helping society to prepare for associated hazards such as heavy rains, floods and drought.

WMO’s update is based on an ensemble of global climate models and historical climatology. The models are verified and calibrated to optimize their performance to derive regional and national scales. The models are also used to compute the Climate Risk Data Centre, Regional Climate Outlook Forums (RCOFs) and National Meteorological and Hydrological Services carry out these tasks to provide more detailed outlooks.

The forecast El Niño is not expected to be as powerful as the event in 2015-2016, which was linked with droughts, flooding and coral bleaching in different parts of the world.

WMO’s global seasonal climate update for December 2018 through February 2019 is based on an ensemble of the regional climate models, the output of which provides the foundation for the ENSO prediction model. A review of all the models is performed monthly and model performance is periodically assessed. The output of these models is also confirmed and complemented by the latest state-of-the-art observations of sea surface temperature and sea level height.

The seasonal climate update is revised every month as new information becomes available and as new model output becomes available. The seasonal climate update is updated based on these changes, and the new version of the update is released every month.

WMO’s long-term climate forecasts have been validated against historical climate data, and have been shown to be accurate in predicting the occurrence of El Niño events, as well as their impact on weather patterns in different regions of the world. However, it is important to note that the forecast is subject to natural variability and uncertainty, and that actual outcomes may differ from what is predicted. Therefore, it is important to continue monitoring the current El Niño event and to be prepared for any potential impacts it may have on local weather patterns and economic activities.

The forecast El Niño is not expected to be as powerful as the event in 2015-2016, which was linked with droughts, flooding and coral bleaching in different parts of the world.

Trainees of CSO visit UEC office in Nay Pyi Taw

A DELEGATION from the civil society organization-NEI based in Mon State visited the Union Election Commission in Nay Pyi Taw yesterday.

At the meeting with 54 trainees and nine staff of NEI, UEC Chairman U Hla Thein explained the responsibility of the commission, expressed the UEC’s commitment to holding a free and fair election in 2020.

Elections are the basic foundation of a democratic country where the Hluttaw representatives for the administrative, legislative and judiciary sectors are elected according to the people’s wish. As such, the work process are being conducted fairly and transparently with basic five norms. Everyone related to the election needs to carry out his/her work dutifully and truthfully, said the UEC chairman.

Each level of the election sub-commission is responsible for conducting the election work process according to the assigned duties and responsibilities.

The commission is carrying out its duties dividing the election processes into three periods: pre-election period, election period and post election period. The trainees need have required capacity as they would have to contribute their works to the country in the future, said U Hla Thein. The trainees also raised questions at the meeting. The meeting came to an end with concluding remarks by the UEC Chairman.

Myanmar Investment Commission’s work in September and October 2018

MYANMAR Investment Commission is permitting local and foreign investments, according to Myanmar Investment Law.

Myanmar Investment Commission had permitted in September 2018 total foreign investment, including increased investment, valued at US$453.429 million, and in October 2018 total foreign investment, including increased investment, valued at US$377.492 million.

Increased number of jobs created by Myanmar Nationals investment during September and October of 2018 are as follow:

External trade tops $4 bln, trade deficit stands at $530 mln

MYANMAR’S external trade between 1 October and 16 November this year totalled US$4.257 billion, up by over $647 million compared with the same period in the last 2017-2018 Fiscal Year; the Ministry of Commerce reported on Monday.

Over the first 47 days of the present 2018-2019 FY, Myanmar exported $1.864 billion worth of goods to other countries, while the value of its imports stood at $2.4 billion, resulting in a trade deficit of nearly $530 million. The trade deficit has declined by over $180 million from the same period last year, when Myanmar recorded a deficit of $712 million.

Myanmar conducts foreign trade principally by sea. Between 1 October and 16 November, the country’s international trade by sea amounted to $3.183 billion, while its external border trade was valued at $1.074 billion. When compared with the same time last year, the country’s non-border trade rose by over $400 million, while border trade decreased by over $200 million.

—Myanmar exports seven main groups of commodities, consisting of agricultural, forest, marine and animal products, minerals, manufactured products and other miscellaneous items. It usually imports three major categories of commodities, covering capital goods, intermediate products, and consumer goods.

Korean wrestling added to UNESCO’s intangible heritage list

SEOUL — Traditional Korean wrestling was recognized Monday as an “intangible cultural heritage of humanity” by the UN Educational, Scientific and Cultural Organization, after being jointly nominated by North and South Korea for listing.

South Korean President Moon Jae-in hailed the decision made by UNESCO’S Intergovernmental Committee for the Safeguarding of the Intangible Cultural Heritage in Mauritius, saying, “This is the first time that the South and the North have listed an intangible cultural heritage together.”

“As such, it will be much easier to spread the originality of Korean traditional culture worldwide if the South and the North work together,” he added.

The two Koreas separately nominated the sport — known as “ssireum” in the South and “ssirum” in the North — for inscription on the Representative List of the Intangible Cultural Heritage of Humanity in 2016 and 2017, respectively.

The two bids were combined into one after a historic inter-Korean summit in April.

Unlike martial arts involving kicking or striking, Korean wrestling involves two opponents gripping each other by waist belts and deploying various techniques to send each other to the ground within a circular, sand-covered ring.

According to South Korea’s nomination form, “The great attraction of ssireum lies in the thrill of the diverse actions — grappling, pushing, throwing, and turning — that all take place within a split second.”

“When a smaller player throws a much larger competitor, evoking a ‘David and Goliath’ event, the excitement of the audience is redoubled,” it says.

The winner of the final game is typically awarded an ox, symbolizing agricultural abundance, and parades around the neighborhood riding the animal in celebration.

Ssireum is enjoyed by all Korea people regardless of differences in social status, region, gender, or age, and serves “as a symbol of Korean traditional sports and of Korean cultural identity,” it says.

The UNESCO committee also recognized that the sport has the social function “enhancing community solidarity and collaboration,” while also offering “a means of improving mental and physical health.”

Cafe opens with robot waiters remotely controlled by disabled people

TOKYO — A cafe featuring robot waiters remotely controlled from home by people with severe physical disabilities opened Monday in Tokyo’s Minato Ward.

Five robots, 1.2 metres tall, controlled by disabled people with conditions such as amyotrophic lateral sclerosis, a form of motor neuron disease, took orders and served food at the cafe that opened on a trial basis.

The cafe, which will be open until 7 December, deploys Ori-Hime-D robots that transmit video footage and audio via the internet, allowing their controllers to direct them from home via tablets or computers.

“The robots” enable physical work and social participation,” Kentaro Yoshifuji, CEO of Ory Lab Inc., the developer of the robot and one of the three organizers of the cafe, said at a press conference.

Ten people will work shifts for 1,000 yen ($8.8) per hour.

The three entities, including the Nippon Foundation and ANA Holdings Inc., aim to launch a permanent cafe by the 2020 Tokyo Olympics and Paralympics.

The organizers said Monday they have also formed a partnership to further promote employment assistance for disabled people by utilizing remotely controlled robots.

“Avatar robots have potential...for transportation and communication,” ANA Holdings chairman Shinichiro Ito said.

Stage set for fresh Australia election in May

SYDNEY — Australia is set for a May election showdown after the prime minister Tuesday announced a budget date in the new year and his weakened liberal party staggered on following another defection.

Scott Morrison announced a new national spending plan for 2 April, promised a fiscal surplus and hailed his party’s custodianship of a booming economy in remarks effectively firing the starter’s gun for the 2019 election campaign.

Parliamentary budget rules and constitutional provisions about the length of campaigns mean the election will now almost certainly take place in early to mid-May. On Tuesday, Liberal MP Julia Banks — who had earlier complained of party bullying and is an ally of ousted former prime minister Malcolm Turnbull — delivered Morrison a hammer blow, quitting the party to become an independent.

The defection put the ruling conservative Liberal Party two members short of a parliamentary majority.

With his government in the minority and his party riven by divisions between moderates and the hard right, the prime minister faces an uphill struggle to keep his job. A weekend parliamentary election in Victoria — the state that encompasses Melbourne — saw the Liberal Party vote shrink to historically low levels.

This, just weeks after the party lost a Federal parliamenta-ry by-election in a Sydney suburb that has been solidly Liberal since the constituency was created at the founding of the country.

Morrison has struggled to keep his party together since Liberal ideological firebrands ousted centrist leader Malcolm Turnbull as prime minister last August.

Since then, persistent back-biting and stinging electoral defeats have created the sense of a government in disarray, even as Morrison has tried to take the fight to the opposition Labour Party. Banks cited Turnbull’s removal as the catalyst for her decision to become an independent.

“Led by members of the re- actionary right wing, the coup was aided by many MPs trading their vote for a leadership change in exchange for their individual promotion, preselection endorsements or silence,” she told parliament.

She accused both the Liberal and Labour parties of being focused on “political point scor- ing” rather than “timely, practi- cal, sensible decisions on matters which Australians care about”.

With each defection the odds of Morrison being ousted in a vote of no confidence increase.

Meanwhile recriminations within the Liberal Party continued behind closed doors.—AFP

New Zealand rescuers save six stranded whales

WELLINGTON (New Zealand) — Six beached whales were successfully refloated off New Zealand Tuesday, rescuers said, after a spate of mass strandings in recent days that resulted in the deaths of dozens of marine mammals.

Wildlife rangers and volunteers used pontoons to float the killer pygmy whales — part of a group of 12 found beached in the country’s far north on Sunday — and take them about 400 metres (437 yards) offshore.

“We are hopeful that the six whales that have been refloated will remain at sea,” the Department of Conservation (DOC) department said in a statement, adding that another two whales were euthanised after continually restranding.

Two of the pod were already dead, and two more died after being found by rescuers on the North Island’s west coast, with the remaining eight transported by truck to the east coast on Monday, where sea conditions were calmer.

The survival of even part of the pod was a rare success for DOC as it struggled to deal with four separate strandings in quick succession, including a sperm whale and a pygmy sperm whale in separate incidents on the North Island coast.

By far the largest was when up to 145 pilot whales were found late Saturday washed up on Stewart Island, 30 kilometres (19 miles) off the southern coast of the Southland.

Half the animals were already dead and the rest were put down because there was no chance of rescuing them from the remote location.

US travel blogger Liz Carlson was among a group of hikers on Stewart Island that found the whales and she described her frustration at being unable to help the huge sea creatures.

“When we realised the horror of what we were seeing, we dropped everything and ran straight into the water,” she posted on social media. “Desperately we grabbed their tails and pushed and yelled, before we got hammered by them thrashing around.

“It was useless — they were so big and heavy and the realisation we could do nothing to save them was the worst feeling I’ve ever experienced.”

The reason whales and dolphins strand is not fully understood but factors can include sickness, navigational error, geographical features, the presence of predators, and extreme weather.

Receding Malawi lake lays bare cost of climate change

ZOMBA (Malawi) — Just four months ago, the fishing harbour at Kachulu on the western shores of Lake Chilwa in Malawi was bustling with fishermen and traders haggling over the catch of the day.

Today hundreds of fishing boats sit marooned on cracked, dry mud as vultures fly above the shores of the once productive fishing zone 30 kilometres (19 miles) east of the southern African country’s old capital Zomba.

Julius Nkhata, a local villager, says the increasingly dramatic seasonal dry-out of the lake — blamed by experts on man-made climate change — has displaced local people and increased joblessness.

“In the 1990s, the frequency of the drying has increased and this is connected to the impacts of extreme weather events typical of climate change,” he said.

“From the 1990s, the frequency of the drying has increased and this is connected to the impacts of extreme weather events typical of climate change,” he said.

One-and-a-half million people live in the areas on the Lake Chilwa basin, which is one of the most densely populated areas in southern Africa.

In the #MeToo era, theologians publish ‘Women’s Bible’

GENEVA (Switzerland) — Tired of seeing their holy texts used to justify the subjugation of women, a group of feminist theologians from across the Protestant-Catholic divide have joined forces to draft “A Women’s Bible”.

As the #MeToo movement continues to expose sexual abuse across cultures and industries, some scholars of Christianity are clamouring for a reckoning with biblical interpretations they say have entrenched negative images of women.

The women we know from translations and interpretations of Bible texts are servants, prostitutes or saints, seen dancing for a king or kneeling to kiss Jesus’ feet.

But while many feminists have called for The Bible, Christianity and religion altogether to be cast aside, an ecletic group of theologians instead insists that if interpreted properly, the Good Book can be a tool for promoting women’s emancipation.

‘Feminist values’

“Feminist values and reading the Bible are not incompatible,” insisted Lauriane Savoy, one of two Geneva theology professors behind the push to draft “Une Bible des Femmes” (“A Women’s Bible”), which was published in October.

The professor at the Theology Faculty in Geneva, which was established by the father of Calvinism himself in 1536, said the idea for the work came after she and her colleague Elisabeth Parmentier noticed how little most people knew or understood of the biblical texts.

“A lot of people thought they were completely outdated with no relevance to today’s values of equality,” the 33-year-old told AFP, standing under the towering sculptures of Jean Calvin and other Protestant founders on the University of Geneva campus.

In a bid to counter such notions, Savoy and Parmentier, 57, joined forces with 18 other women theologians from a range of countries and Christian denominations.

The scholars have created a collection of texts challenging traditional interpretations of Bible scriptures that cast women characters as weak and subordinate to the men around them.

Parmentier points to a passage in the Gospel of Luke, in which Jesus visits two sisters, Martha and Mary.

“It says that Martha ensures the “service”, which has been interpreted to mean that she served the food, but the Greek word diakonia can also have other meanings, for instance it could mean she was a deacon,” she pointed out. —AFP

Jack Ma, China’s richest man, is a Communist Party member

BEIJING — Jack Ma, founder of Chinese tech giant Alibaba, is among the world’s richest people but he has now emerged as a member of another club: China’s 89-million-strong Communist Party.

The billionaire’s Communist bona fides were revealed by the People’s Daily, the party’s official mouthpiece, in an article praising contributors to China’s development.

He is not the first nor likely the last Chinese super-rich capitalist to join the party, which counts property titan Xu Jiayin and Wanda Group founder Wang Jianlin among its millionaire members.

But Ma’s membership had not been known until now as China’s richest man had previously suggested that he preferred to stay out of politics.

In Monday’s article, the People’s Daily said Ma was a party member who has played an important role in pushing China’s Belt and Road global trade infrastructure initiative — a pet project of President Xi Jinping.

Ma has also been honoured as one of the “outstanding builders of socialism with Chinese characteristics in Zhejiang Province,” where Alibaba is based, the daily said.

Joining the party can be helpful to private businessmen and women in the country as they navigate a complicated business environment where the state-led economy dominates many industries and private business can be unwelcome.

Xi has renewed a push to expand the Communist Party’s influence in private business, requiring any company with more than three party members to set up a party cell, or lacking numbers, join with nearby firms.

Three in four private companies already host party organisations.

“We must do a good job in the education and management of party members and guide them to play an active role,” Xi told officials in Shanghai earlier this month, noting the increase in private employment and new types of employment.

Xi is pushing further into intertwining the party and business, with the latest rewrite to the rules for party organisations published Sunday by official news agency Xinhua.

In private companies party cells should “guide and supervise the enterprise to strictly abide by national laws and regulations,” the draft order says, according to Xinhua.

Ma did not reveal his Communist Party membership in paperwork filed for Alibaba’s 2014 initial public offering on the New York Stock Exchange. It is not known if Ma was a member at the time.

A spokeswoman for Alibaba declined to comment.

Ma — who announced in September that he would step down as head of Alibaba next September that he would step down as head of Alibaba next year — has previously indicated he preferred to keep the Chinese state at arm’s length.

“My philosophy is to be in love with the government, but never marry them,” he said at the World Economic Forum in Davos in 2007.

But party members must hold up their right fist and recite an oath upon joining.

“Be loyal to the party, work actively, fight for communism all one’s life, always be prepared to sacrifice everything for the party and people, and never betray the party,” they recite. —AFP

MUMBAI — Punjabi actor-singer Jassi Gill, who made his Bollywood debut with “Happy Phirr Bhag Jayegi”, says Hindi cinema believes in giving opportunities to talented artistes.

“There is talent over there. Though they are trying out new concepts but that is done with limited budget. Here, in Bollywood, there are big production houses and producers.

“Also, Bollywood pays more money to actors than Punjabi cinema. The budget is not that much over there, so how will they pay more to actors,” the actor said.

With artistes and filmmaker working in different film industries, Jassi believes it is a healthy sign for Indian cinema as the lines are blurring.

“Cinema will only grow. With this one can reach out to more audience. And as an actor you can explore and challenge yourself and at the same time show your talent to other industry people,” he added.

Jassi, who is currently working on Kangana Ranaut-starrer “Panga”, is grateful to Bollywood filmmakers for giving him opportunity to play different characters.

“It is not easy to get everything at the beginning. I have confidence in my ability as an artiste. I know I will have to prove myself as an actor and I am ready for all the hard work.”

“In Panga”, being directed by Ashwiny Iyer Tiwari, Jassi plays the role of a supportive husband to Kangana’s character, a kabaddi player.

“Kangana and I share good bonding today. I am learning a lot working with her. I am glad to be working with Ashwiny and Kangana,” he said.

According to Jassi, about 20-25 per cent of shoot is over and the next schedule will be in Delhi and Kolkata. —PTI
Cheers as Mars InSight spacecraft lands on Red Planet

PASADENA (United States) — Cheers and applause erupted at NASA's Jet Propulsion Laboratory on Monday as a waft-high unmanned lander, called InSight, touched down on Mars, capping a nearly seven-year journey from design to launch to landing.

The dramatic arrival of the $993 million spacecraft — designed to listen for quakes and tremors as a way to unveil the Red Planet's inner mysteries, how it formed billions of years ago and, by extension, how other rocky planets like Earth took shape — marked the eighth successful landing on Mars in NASA's history. “Touchdown confirmed,” a mission control operator at NASA said, as pent-up anxiety and excitement surged through the room, and dozens of scientists leapt from their seats to embrace each other.

“It was intense and you could feel the emotion,” said NASA administrator Jim Bridenstine, in an interview on NASA television afterward. Bridenstine also said President Donald Trump and Vice President Mike Pence had watched on television and called to congratulate the US space agency for its hard work.

“Ultimately, the day is coming when we land humans on Mars,” Bridenstine said, adding that the goal is to do so by the mid 2030s.

The vehicle appeared to be in good shape, according to the first communications received from the Martian surface.

But as expected, the dust kicked up during the landing obscured the first picture InSight sent back, which was heavily flecked. France’s Centre National d'Études Spatiales (CNES) made the Seismic Experiment for Interior Structure (SEIS) instrument, the key element for sensing quakes.

The principal investigator on the French seismometer, Philippe Lognonné, said he was “relieved and very happy” at the outcome. “I’ve just received confirmation that there are no rocks in front of the lander,” he told AFP.

And in a final crucial phase, NASA said InSight signaled to Earth that its solar panels — twin solar arrays spanning seven feet (2.2 meters) in width — had opened and were collecting sunlight on the surface of Mars.

“The InSight team can rest a little easier tonight now that we know the spacecraft solar arrays are deployed and recharging the batteries,” said Tom Hoffman, InSight’s project manager.

Entry, descent, landing

The spacecraft is NASA’s first to touch down on Earth’s neighboring planet since the Curiosity rover arrived in 2012. More than half of 43 attempts to reach Mars with rovers, orbiters and probes by space agencies from around the world have failed.

NASA is the only space agency to have made it, and is invested in these robotic missions as a way to prepare for the first Mars-bound human explorers in the 2030s.

“We never take Mars for granted. Mars is hard,” Thomas Zurbuchen, NASA associate administrator for the science mission directorate, said on Sunday.

The nail-biting entry, descent and landing phase began at 11:47 am (1940 GMT) at NASA’s Jet Propulsion Laboratory in Pasadena, California, home to mission control for Mars InSight, and ended one second before 1953 GMT.

A carefully orchestrated sequence — already fully preprogrammed on board the spacecraft — unfolded over the following several minutes, coined “six and a half minutes of terror.”

Speeding faster than a bullet at 12,390 miles (19,800 kilometers) an hour, the heat-shielded spacecraft encountered scorching friction as it entered the Mars atmosphere.

The heat shield soared to a temperature of 2,700 Fahrenheit (about 1,500 Celsius) before it was discarded, the three landing legs deployed and the parachute popped out, easing InSight down to the Martian surface.

Goal: 3D map of inner Mars

InSight contains key instruments that were contributed by several European space agencies.

France’s CNES made the SEIS instrument, while the German Aerospace Center (DLR) provided a self-hammering mole that can bury 16 feet (five meters) into the surface — farther than any instrument before — to measure heat flow.

Spain’s Centro de Astrobiología made the spacecraft’s wind sensors, and three of InSight’s seismic instruments were designed and built in Britain.

Other significant contributions came from the Space Research Center of the Polish Academy of Sciences and Astronika and the Swiss Institute of Technology. —AFP

E. coli lettuce outbreak traced to California

NEW YORK — An outbreak of E. coli linked to romaine lettuce appears to have been traced to crops in California, the US food authority said Monday.

American consumers were warned against eating the leafy salad by health officials last week.

The outbreak has caused 43 people to become sick in the US and another 22 in Canada, according to the Food and Drug Administration (FDA).

“Our investigation at this point suggests that romaine lettuce associated with the outbreak comes from areas of California that grow romaine lettuce over the summer months,” the FDA said in a statement. “The outbreak appears to be related to ‘end of season’ romaine lettuce harvested from those areas,” it said.

The harvest has now shifted to other areas and it was “critically important to have a ‘clean break’ in the romaine supply available to consumers in the US in order to purge the market of potentially contaminated romaine lettuce,” the FDA said.

It added that the break in supply appears to have been accomplished after officials requested on 20 November that the produce be withdrawn from the market and destroyed.

On the same day — two days before the Thanksgiving holiday when Americans gather and feast together — the Centers for Disease Control and Prevention advised consumers not to eat any romaine lettuce and to throw away any they might have in their homes. —AFP

Chinese medical device manufacturers display core technologies in US

CHICAGO — About 50 Chinese medical device manufacturers displayed their core technologies and latest achievements at a high-level meeting in the radiology industry that kicked off Sunday.

The annual meeting of the Radiological Society of North America, an international society of radiologists, medical physicists and other medical professionals, will run six days.

Neusoft Medical Systems Co. Ltd., one of the leading medical device manufacturers in China, put on display advanced CT, MR, PET-CT as well as other core technology components, marking its 19th consecutive year to attend the meeting.

“In recent years, China’s medical device industry has achieved development in leaps. Thanks to the application of artificial intelligence, some of the products made in China are now at world top level,” said Patrick Wu, vice chairman of China Association of Medical Equipment and CEO of Neusoft Medical.

The company’s products are used in over 9,000 medical institutions in over 110 countries, with its total installed capacity exceeding 30,000 units, Wu said.

“With the rapid development of global medical equipment giants, our advantages lie in high quality, reasonable price and customer-oriented services,” said Jiang Shuyin, vice president and general director of brand and public relations management center at Neusoft Medical.

MinFound Medical Systems Co. Ltd., another medical device producer in China, also attended the annual meeting with its independently designed and produced CT equipment CURA-CT16 and ScintCareCT16, both having been granted certification by the US Food and Drug Administration.

“After spending five years in research and development, CURA-CT16 and ScintCareCT16, excellent in performance and stability, have gained widespread recognition in the world,” said MinFound’s CEO Jiang Haoc-huan.

Jiang added that the company is committed to bringing positive changes to the international radiology industry and making Chinese brands influential in the world. —Xinhua
Time for Liverpool to show Champions League teeth away from Anfield

LONDON — Paris Saint-Germain’s Brazilian striker Neymar during the UEFA Champions League group C football match between and compares to Liverpool's highs and lows in the Champions League as stark as in the past few months.

Roma were reeling 5-0 down after just over an hour of last season's semi-final first leg, PSG were outclassed this season despite the narrow margin of the dramatic 3-2 victory and Red Star Belgrade were dismissed serenely 4-0 in October.

Indeed, so easily were the Serbs swept aside that concerns were raised about the growing gulf in resources between European football's elite and once great powers now relegated to also-rans by the geographical lottery that leaves them outside the continent's top five leagues.

Last season Liverpool only secured victory on the road twice in Europe and were left hanging on for a 4-2 defeat in Rome that edged Jurgen Klopp’s men through by the odd goal on aggregate. They were then beaten 3-1 by Real Madrid in the final in Kiev.

Two colossal errors by Loris Karius in that final pushed Liverpool to splash out in a world record fee for a goalkeeper with a £160 million ($205 million, 181 million euros) summer spending spree that also brought in Fabinho, Naby Keita and Xherdan Shaqiri.

And while an upturn in fortunes, particularly defensively, has been seen in an unbeaten start to the Premier League season, it has not yet cured Liverpool’s travel sickness in the Champions League. — AFP

Djokovic, Nadal, Federer in year-end top three for seventh time

PARIS — Novak Djokovic, Rafael Nadal and Roger Federer finished as the year-end top three for the seventh time, and the first since 2014, as the ATP World Tour published the 2018 year-end ATP Rankings on Monday.

The star trio ranked first at one stage during the year, the first time for them to make that during the same season.

Djokovic, who ended 2017 at No. 12, became the first player in history to finish No. 1 after ranking outside the top 10 in the previous season. At 31, he is also the oldest year-end world No. 1.

Five changes in top 10 can be found compared with that last year, including two newcomers, the sixth-ranked Kevin Anderson and No. 10 John Isner. Moreover, Djokovic made his way back to top 10 along with Juan Martin del Potro and Kei Nishikori.

For the first time since the ATP Rankings was introduced in 1973, players from five different regions of the world have been represented in the top 10, including six from Europe, and one each from Africa, Asia, North America and South America.

The ATP Rankings has witnessed the year-end top 10 from 10 different countries for the second time in three years.

The ATP year-end top 10 players are Djokovic, Nadal, Federer, Alexander Zverev, del Potro, Anderson, Marin Cilic, Dominic Thiem, Nishikori and Isner. — Xinhua

Bach says there is no “plan B” if 2026 bids falter

TOKYO — International Olympic Committee President Thomas Bach said Tuesday that there is no “plan B” if 2026 Winter Games bids from Stockholm and three Italian cities are withdrawn, reiterating that Sapporo is not a fallback option.

Speaking exclusively to Kyodo News in Tokyo, Bach acknowledged that challenges to both bids remain, but said that the Swedish and Italian options — in Milan, Turin and Cortina — remain “excellent projects” that are in line with the IOC’s cost-cutting Olympic Agenda 2020.

“We have no plan B, there is no plan B,” said Bach, 64, himself an Olympian in 1976.

“There is great use of existing facilities (in the Swedish and Italian bids), it is about traditional winter sports countries and areas and they still have to work, one way or the other, to convince everybody to come together. This we have to acknowledge,” he said.

On the prospect of Sapporo, the capital of Japan’s northernmost island prefecture of Hokkaido which originally threw its hat into the 2026 ring before shifting its focus to a 2030 bid, coming to the rescue, Bach said it is not an option and that it did not come up when he spoke to Sapporo Mayor Katsuhira Akimoto.

“The mayor expressed his thanks for the sympathy that the IOC has been showing with the victims of the earthquake in Sapporo and the region and also for the understanding that we have shown. And that, under the circumstances, they did not want to follow up on 2026.”

A magnitude 6.7 earthquake rocked the southwestern part of Hokkaido including Sapporo on 6 September, killing dozens of people.

He did reiterate, however, that the recent withdrawal of Calgary’s 2026 bid after 56.4 per cent of the city’s residents voted against it in a plebiscite was an expression of an anti-establishment mood, not a response to Olympic-related concerns specifically. He said that people have lost faith in authorities to make such decisions and that if governments, businesses and the sports movement all agree that hosting an Olympics is a good idea despite a lack of public support then “there must be something wrong” and they “do it because they just want to fill their pockets.” “It is just this anti-establishment wave which is existing in not only a few Western countries,” he added.

Given the adversity the 2026 bids are facing, Bach was happy to hail the successes he has witnessed and the welcome he has received since arriving in Tokyo, his first visit since 2016.

Bach was full of praise for Tokyo 2020 organizers who have already more than filled their 80,000-volunteer quota for the 2020 Games, with 44 percent of applicants being non-Japanese citizens. — Kyodo News
