List of Publications:

Title	Published Date	Language
'Advance Release'	October 1983	English, Burmese
'Rangoon City'	January 1986	English
'Rangoon Division'	May 1986	English
'Burma'	June 1986	English

Reports on all the remaining states and divisions will be available in late 1986. The above publications are available for sale at the following address:

Census Division
Immigration and manpower Department
416 Maha Bandoola Street
Rangoon 11182. Burma
Telephones: 85492, 82938, 85979

PREFACE

One of the principal objectives laid down by the First Party Congress of the Burma Socialist Programme Party in 1971 June-July was to plan the national economy. As a result, the twenty-year long term plan comprising of a series of five four-year plans was materialized.

Policies set forth in the man power sector of the twenty-year long term plan include among other:

- Population censuses and labour force surveys to be taken regularly to determine the country's labour force situation;
- Vital statistics system to be improved in order to facilitate population projections;
- Based on statistics compiled from censuses and surveys, a plan for the labour force to be drawn up in conformity with economic plans, so that optimum use of the country's labour force takes place.

Accordingly, the Government of the Socialist Republic of the Union of Burma conducted its first post war nation wide census in 1973 and the second one in 1983. These two censuses taken after independence, unlike the ones taken in the pre-war period, were organized not as a mere government departmental activity, but as a mass movement.

The 1983 population census was conducted from 1 to 5 April. It was carried out successfully as an important national undertaking under the leadership of the Burma Socialist Programme Party, and under the supervision of the Peoples' Councils at different levels and with the active participation of Lanzin Youth members, government employees, armed service personnel, students, teachers and all the mass organization members. Thus, the 1983 census was the outcome of the united effort of the entire people of Burma.

The census project has been implemented under the sponsorship of the Ministry of Home and Religious Affairs. Census committees were formed at the Central, State, Division, Township, Ward and village tract levels to organize and conduct the census operations. These committees were responsible for the actual census taking. In addition, the Central Census Committee was responsible for the data processing and publication of the census.

The 1993 census was the first national census using two different questionnaires; a short form consisting of 7 social questions to be asked to 80 percent of the population and a long form consisting of 18 social, economic and demographic questions for the remaining 20 percent on sample basis.

The provisional results of this census based on manual counts wear published as an "Advance release" in October 1983. The current publication is presented in two parts. Part One comprises highlights of the main findings of the 1983 census, sample design, estimation of the sampling errors and the results of the Post Enumeration Check (PEC). Part Two, comprised of 38 tables, includes demographic and socioeconomic characteristics and the geographic distribution of structures and households. I hope this publication will serve as a useful reference to administrators, planners, research workers and the public.

The Post Enumeration Check (PEC), which is the first to be carried out in Burma, was conducted on a sample basis exactly one year after the 1983 census. The PEC was conducted to evaluate the completeness of the census coverage and the accuracy of its results. The PEC shows that the coverage of households and persons in the census were 99.6 percent and 99.1 percent respectively.

I express my grateful thanks to all those who have contributed directly and indirectly to the completion of this census on schedule. But it must be said that the largest part of the credit for the success should go to the people of Burma themselves and next, to the devoted and hard working enumerators, supervisors and the members of the census committees at different levels in the states and divisions.

I would especially like to thank the Chairman and members of the Central Census Committee and sub committees for their guidance, direction and contribution to this endeavour. I would also like to express my gratitude to the United Nations Development Programme (UNDP), United Nations Fund for Population Activities (UNFPA), U.S Agency For International Development (USAID) and the Government of Norway for their generous assistance without which the issue of this final printed publication would have been delayed.

Special acknowledgement goes to the various Government Ministries and Departments for their active cooperation and assistance; especially to the Ministry of Information and the Printing and Publishing Corporation for the timely work done by them.

The officers and staff of the Immigration and Manpower Department offices in States and Division worked whole heartedly and each of them gave his or her best in ensuring that the census was carried out successfully. I place on record my deep sense of gratitude to all of them. I would also like to thank the officers and staff of my own office who were involved in the census project.

In particular, I must record my appreciation to the Census Department for the arduous task of the scrutinization and compilation of the census data and the preparation of the analysis of the census result. I am greatly indebted to the hard work of the officers and staff of the immigration and Manpower Department Computation Center in bringing out this publication in time.

Report

CHAPTER I

INTRODUCTION

1. The Socialist Republic of the Union of Burma, Located in South East Asia, Lies between 9° 32' N and 28° 31' N Latitudes and 92° 10' E and 101° 11' E longitudes with an area of 261227.8 square miles (approximately 676577.5 square kilometers). It shares common borders with Bangladesh and India in the west, China in the north and north-east, Laos and Thailand in the east. The Bay of Bengal lies in the west and the Andaman sea in the south of the country.

2. Burma has a long tradition of censuses. The first population census, in its true sense, was taken in 1872 for lower Burma, which was then under the British administration, followed by another one in 1881. In 1886 the rest of the country was annexed by the British and a census was taken for the first time for the whole country in 1891. Since then decennial censuses were taken regularly up to 1941. The area covered by the prewar censuses varied from one census to another as can be seen below:

Year	Area covered (square miles)	Population	Remarks
1872	88566	2747148	Lower Burma
1881	87220	3736771	Lower Burma
1891	171430	7722053	
1901	226209	10490624	
1911	230839	12115217	
1921	233707	13212192	
1931	233492	14667146	
1941	261757	16823798	

3. After independence in 1948, an attempt was made to take a census in three stages. The first stage census was taken in 1953 and covered only 252 towns. The second stage census, taken in 1954, covered 2143 village tracts in Burma Proper and 1016 village tracts in Kachin State mostly adjoining the town area. The third stage planned to be taken in 1955 was abandoned due to unsettled condition of the country.

4. The first nation wide census after independence was taken in 1973 as a national undertaking. It was followed by the 1983 Census, the eighth nation wide census of Burma since 1891 and the second after independence.

5. At the fourth Party Congress, the Central Committee had recommended to formulate a manpower project for the utilization of manpower. For implementing such a program, a nation-wide census was essential. Hence, the 1983 census was conducted with the following objectives:

- (a) To obtain reliable population statistics needed for implementing economic and social planning and administrative services for the country;
- (b) To provide government institutions with important social, economic and demographic information required to fulfill their respective functions;
- (c) To make basic scientific analysis and research on the current state of population such as size, composition, distribution, growth and changes;
- (d) To provide a basic frame for future social, economic and other sample surveys.

6. Preparatory work such as preparation of area lists and census maps began as early as late 1980. In this census two different questionnaires, long and short, were designed so that additional information on education, labour force and fertility be collected on a 20 percent sample basis. The idea behind the preparation of two different questionnaires was to save time, cost and labour and at the same time to collect wider information on social, economic and demographic characteristics.

7. The enumeration of the census took place from 1 to 5 April 1983 on the de-jure basis. Moving population, namely the homeless and the boat dwellers, were enumerated on the last day of enumeration.

Enumeration teams were sent to hill tracts and remote areas, where communication was difficult, prior to the census date. In cases where continuous traveling was necessary, extension of the enumeration period beyond the scheduled date was allowed.

8. Under the provision of the Census Act of 1972, the government was vested with full power to conduct the census and to appoint personnel and organizations at various administrative levels. Using this power, the government appointed the Central Census Committee with the Deputy Minister for Home and Religious Affairs as Chairman and the other deputy ministers in the cabinet as members to conduct the 1983 census. Subsequently, Central Census Committee formed Census Committees at State/Division, township, ward and village tract levels. Census Committees at different administrative levels were given full responsibility for enumeration supervision and control of the census work in their respective areas. The Census Committees have the chairman and secretary of the People's Councils as chairman and secretary of the committee respectively. The Immigration and Manpower Department of the Ministry of Home and Religious Affairs was charged with the responsibility of taking the census.

9. With the help of the Lanzin Youth Central Organization Committee, enumerators were largely drawn from the Lanzin Youth members, high school and university students; school teachers, some university students and other government employees were recruited as supervisors. Armed Services and People's Police Force personnel also helped in the enumeration field work.

10. Each enumerator was assigned to cover a census block (enumeration area) consisting of 250 to 400 persons and a supervisor was appointed for every five enumerators on the average. About 170,000 enumerators and 34,000 supervisors were employed in the 1983 Census. They all were given intensive training including practical work. A small honorarium was paid to them.

11. A post Enumeration Check (PEC) Was conducted exactly one year after the census enumeration, that is from 1 to 5 April 1984, to evaluate the completeness of the census coverage and the accuracy of its results. Taking advantage of this second round of independent enumeration, some questions relating to housing, fertility and mortality were added to the PEC questionnaire.

12. Data processing of the census returns and publication of the results were done at the office of the Census Division, immigration and Manpower Department. Some 500 temporary staff were recruited and with their assistance, the filled-in questionnaires were manually edited and coded. The information was then entered into two mini computers; each with one mega byte of memory and 29 Visual Display Units (VDU). Captured data was then transferred to the third and more powerful mini computer with two mega byte of main memory for machine editing and tabulation. The mini computers, two model 6/48s and a 6/92 from Cii Honeywell Bull, were donated by the United Nations; software packages for editing (CONCOR) and tabulation (CENTS 4) were the courtesy of USAID and the U. S Bureau of the Census.

13. An Advance Release' of preliminary population counts was compiled and published in October 1983 which enabled the Government and the people to get hold of the manually prepared summary data as quickly as possible while the detail data processing was still under way.

14. The first publication ever to come out of the 1983 Census with computer tabulated results, a special volume for 'Rangoon City', was released in January 1986. It was followed by a volume for 'Rangoon Division' in May 1986. Current volume for the whole 'Union' is the third of the series of planned publications. Similar publications for the remaining seven states and six divisions will soon follow.

15. Of the 38 tables contained in this volume, 11 tables were compiled from the short questionnaires and 25 tables from the long questionnaires. Tables 2 and 3 were manually compiled from the structure listings.

CHAPTER II

EXPLANATIONS AND DEFINITIONS

Explanations

1. As mentioned earlier, in 1983 Population Census, two different questionnaires, short and long, were used. A list of the census blocks (enumeration areas) was used as a sampling frame and a one –stage stratified, replicated, systematic sampling method was adopted. The Total area of the country was divided into 14 strata and 10 replicates in each stratum for sample selection. Sample selection was designed in such a way as to represent urban and rural areas separately.
2. The total population count is based on the sum of the short and long forms. Education, economic and fertility characteristics covered by the long form are weighted to match the total population count based on urban/rural areas, sex and age (14 categories).
3. The questionnaires were designed in a pre-coded form to facilitate manual processing and data entry. The short form covered 7 questions as listed below:
 - (a) Name
 - (b) Relationship to head of household
 - (c) Sex
 - (d) Age
 - (e) Marital Status
 - (f) Race, and
 - (g) Religion.
4. Besides these 7 questions, the long form covered 11 additional questions on socio-economic and fertility characteristic. The additional questions in the long form are listed below:

- (a) School attendance
- (b) Highest standard passed
- (c) Literacy
- (d) Occupation
- (e) Industry
- (f) Employment status
- (g) Reason for not working
- (h) Working during last 12 months
- (i) Children ever born alive
- (j) Children still living, and
- (k) Date of birth of last child.

5. The time reference for economic characteristics was 2 weeks preceding the census date. However, the question on working during the last 12 months was asked to study seasonal variation in labour force participation.

6. The methods and concepts used in the 1983 Census were almost identical to those which were used in the 1973 Census with the exception of the collection of the economic characteristics. In the 1983 Census, in choosing the principal occupation of a respondent with dual occupations, the time criterion was used instead of the income criterion used in the 1973 Census.

Definitions

7. The terms used in any context in this volume convey the notions defined herein:

(a) Total Population

The total population is comprised of all persons permanently residing in the socialist Republic of the Union of Burma at the enumeration point of time including inmates of institutions, moving population, foreigners, armed services personnel and those who are temporarily abroad; but excludes foreign diplomatic personnel and their families.

(b) Census Block

A census block is an area, demarcated with well-defined boundaries within a ward or village tract. Each census block was assigned to an individual enumerator.

(c) Time Reference

The enumeration point of time was as of midnight on 31 March 1983.

(d) Structure

A structure is any building built for dwelling, business, office or any other purpose. Excluded are structures temporarily erected and dismantled within a day.

(e) Household

A household is a family or a group of related or unrelated persons who share a common dwelling unit and eat, as the saying goes, out of the same pot. A household may either be a single person household or a multi-person household.

(f) Head of Household

In general, the head of a household is the person mainly responsible for earning the livelihood for the household. There may be cases where any other member of the household is regarded as the head of household irrespective of responsibility for livelihood.

(g) Inmates of Institutions

Inmates of Institutions refers to a group of persons who are permitted to live in compliance with specific regulations in institutions such as monasteries, homes for the aged poor, asylums and jails, etc..

(h) Moving Population

The moving population includes:

- a. Those who have no permanent dwelling and live on moving vehicles;
- b. Those who are homeless such as beggars and vagrants.

(i) Relationship to Head of Household

Relationship to head of household refers to the relationship of the person enumerated to the head of the household.

(j) Age

Age is the number of years completed on the last birthday.

(k) Marital Status

Marital status is the personal status of the person enumerated in relation to marriage customs. Marital status is identified under five categories:

- a. Single
- b. Married
- c. Widowed
- d. Divorced, and
- e. Renounced.

(l) Race

Race refers to the ethnic origin of the person enumerated.

(m) Highest Standard Passed

Highest standard passed refers to the successful completion of the highest standard.

(n) School Attendance

School attendance is defined as attendance at any regular educational institution for systematic instruction at any level of education during the last 12 months. Instruction for particular skills such as in-service training courses and short term vocational training courses are excluded. But included in school attendance are those attending regular educational institutions such as Workers' Colleges, Youth Affairs' Night Schools, Teachers' Training Schools, and University Correspondence Courses.

(o) Literacy

Literacy is the ability both to read and write any language with reasonable understanding.

(p) Occupation

Occupation is the work done by a person as a means of livelihood to earn income either in cash or in kind. It refers only to those who were employed during the specified 14 days, that is the period from 18 March 1983 to 31 March 1983, including unpaid family workers. Only the occupation in which the respondent worked most of the time was recorded for persons with dual occupation.

(q) Industry

Industry is the branch of economic activity of the establishment in which the enumerated person is employed, e.g. agriculture, livestock breeding, manufacturing, commerce, transportation, etc.

(r) Employment Status

Employment status refers to the status of an individual an employer or employee with respect to employment. It is identified under seven categories:

- (1) Employer
- (2) Own account worker
- (3) Employee (Private)
- (4) Employee (Co-operative)
- (5) Employee (Government)
- (6) Unpaid family worker
- (7) Worker in Party and Peasants' and Workers' Organization.

(s) Employed persons

Out of the total population 10 years of age and over, employed persons include all those who are working during the specified 14 days. Persons on leave are defined as employed.

(t) Persons in Labour Force

Out of the total population 10 years of age over, persons in the labour force include all those who, during the specified 14 days, are:

- (1) Working or
- (2) Seeking work.

(u) Persons not in Labour Force

Out of the total population 10 years of age over, persons not in labour force include all those who, during the specified 14 days,

- (1) Engaged in the household work
- (2) Students
- (3) Physically disabled
- (4) Pensioners
- (5) Dependents
- (6) Ill health
- (7) Unemployed seasonal workers:
 - (a) Agriculturists
 - (b) Other workers and
- (8) Others.

(v) Children Ever Born Alive

Children ever born alive includes all children born alive during the life time of the woman concerned up to the census date.

(w) Children still living

Children still living includes all the children born to the woman concerned who are still alive regardless of their age at the census date.

(X) Business Establishment

A business establishment in a dwelling unit refers to a business established as a source of income or profit.

(Y) Date of birth of Last Child

The month and the year of the last live birth for the woman concerned was recorded.

CHAPTER III

ANALYSIS

Coverage

1. The Socialist Republic of the Union of Burma covers 261227. 848 square miles (676577.5 sq.km) and consists of 7 States and 7 Divisions. Under 14 States and Division there are 314 townships. Again under 314 townships there are 288 towns, 2190 wards and 13756 village tracts. Wards in case of urban and village tracts in case of rural are the lowest administrative levels. In carrying out the field enumeration in 1983, all the 2190 wards of 288 towns, representing total urban area, were fully covers. Out of the total of 13756 village tracts, 12814 were completely covered, 112 were partially covered and 830 were uncovered for security reasons. Total enumerated population represents 96.6 percent of total population. Detailed statement of coverage by individual State and Division is shown in Table A-1.

Total Population

2. According to the final results, the total population of the Socialist Republic of the Union of Burma is 35307913 (including estimated population of 1183005 persons for the areas restricted for security reasons). There are 17518255 males and 17789658 females. in the advance release publication, the total population was shown as 35313905. The difference being 5592 persons, i.e. 0.02 percent, is negligible. of the total population, urban population represents 24.0 percent in 1983 as against 23.6 percent in 1973.

Completeness

3. The 1984 post enumeration Check indicates that the 1983 Census for the country covered 99.6 percent of households and 99.1 percent of total population.

Table A-1									
Area Covered in 1983 Census by State and Division									
Sr No	State / Division	Townships	Towns	Wards	Village Tracts			Estimated population of restricted areas	
					Total	Enumerated * *			Restricted For Security Reasons
						Completely	Partially		
	Union	314	288	2190	13756	12814	112	830	1183005
1	Kachin State	18	17	85	614	404	29	181	85020
2	Kayah State	6	6	27	79	69	2	8	8768
3	Karen State	7	7	33	377	191	16	170	422379
4	Chin State	9	9	29	476	476	-	-	-
5	Sagaing Division	38	38	165	1816	1775	7	34	37014
6	Tenasserim Division	10	9	54	263	258	3	2	3304
7	Pegu Division	28	32	233	1391	1391	-	-	-
8	MagweDivision	25	26	153	1543	1543	-	-	-
9	MandalayDivision	29	28	216	1580	1580	-	-	-
10	Mon State	10	10	62	381	381	-	-	-
11	RakhineState	17	17	119	1041	1041	-	-	-
12	RangoonDivision	39	13	503	641	641	-	-	-
13	ShanState	52	48	304	1632	1142	55	435	62502
14	Irrawaddy Division	26	28	207	1922	1922	-	-	-

** Some wards and village tracts listed as 'Enumerated' cannot be included in the computer tabulation since they have no inhabitants, but at the same time are still classified as administered areas and included in this table. The result is a discrepancy between the above table and Table 4 on page 2-19, in respect to the number of wards and village tracts.

Density

4. Population density is 135 persons per square mile (52 persons per sq. km.) in 1973 as against 111 persons per square mile (43 persons per sq km.) in 1973. Population density by State and Division is shown in **Table A-2**.

Table A-2			
Population Density by State and Division			
State / Division	Total Population	Population Density	
		Persons per sq.	Persons per sq.
		mile	km
Union	35307913	135	52
Kachin State	904794	26	10
Kayah State	168429	37	14
Karen State	1055359	90	35
Chin State	368949	27	10

Tenasserim Division	917247	55	21
Pegu Division	3799791	250	96
Magwe Division	3243166	187	72
Mandalay Division	4577762	320	124
Mon State	1680157	354	137
Rakhine State	2045559	144	56
Rangoon Division	3965916	1010	390
Shan State	3716841	62	24
Irrawaddy Division	4994061	368	142

Growth

5. Total population is 35307913 in 1983 and the same was 28921226 in 1973. The annual intercensal growth rate is 2.02 percent.

Household, Institution and moving Population

6. Total enumerated population is 34124908 and is composed of 98.8 percent of household population, 1.2 percent of institutional population and less than 0.1 percent of moving population. Institution population consists of 92.5 percent males and 7.5 percent females while moving population consists of 63.0 percent males and 37.0 percent females.

Age and Sex

7. The total population shows more females than males in urban as well as in rural. Sex ratios (males per 100 females) for the union, urban and rural are 98.6, 99.1 and 98.4 respectively.

8. The median age for males and females have increased in 1983 compared to 1973. The comparison of median ages are shown below:

	1973	1983
(a) Median age for males	18.9 years	19.9 years
(b) Median age for females	19.3 years	20.6 years

9. Age composition in 1983 reflects a considerable change especially in case of urban population. Percentage distribution of population by broad age groups and dependency ratios are presented below:

	1973			1983		
	<u>Union</u>	<u>Urban</u>	<u>Rural</u>	<u>Union</u>	<u>Urban</u>	<u>Rural</u>
(a) Under 15 years	41.5%	40.8%	41.7%	38.6%	35.7%	39.5%
(b) 15-59 years	52.5%	53.7%	52.1%	55.0%	58.1%	54.1%
(c) 60 years and over	6.0%	5.5%	6.2%	6.4%	6.2%	6.4%
(d) Dependency Ratio	0.90	0.86	0.92	0.82	0.72	0.85

10. Percentage distribution of population by 5 year age groups for 1983 is given in **Table A-3** and age pyramids are presented in Figure 1 and **Figure 1(a)**. A change in age structure is more apparent in age pyramid for 1983 urban population.

11. In order to evaluate the age data, Whipple's and Myers' indices are calculated and show below:

		Union	Urban	Rural
(a) Whipple's index	Males	141.9	114.4	151.5
	Females	143.7	115.1	153.7
(b) Myers' index	Males	14.1	5.8	17.3
	Females	16.0	6.4	19.4

These indices show that age reporting in 1983 Census especially in urban is fairly accurate.

Table A-3
Percentage Distribution of Population by Age and Sex

Age Group	Union			Urban			Rural		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
Union	100	100	100	100	100	100	100	100	100

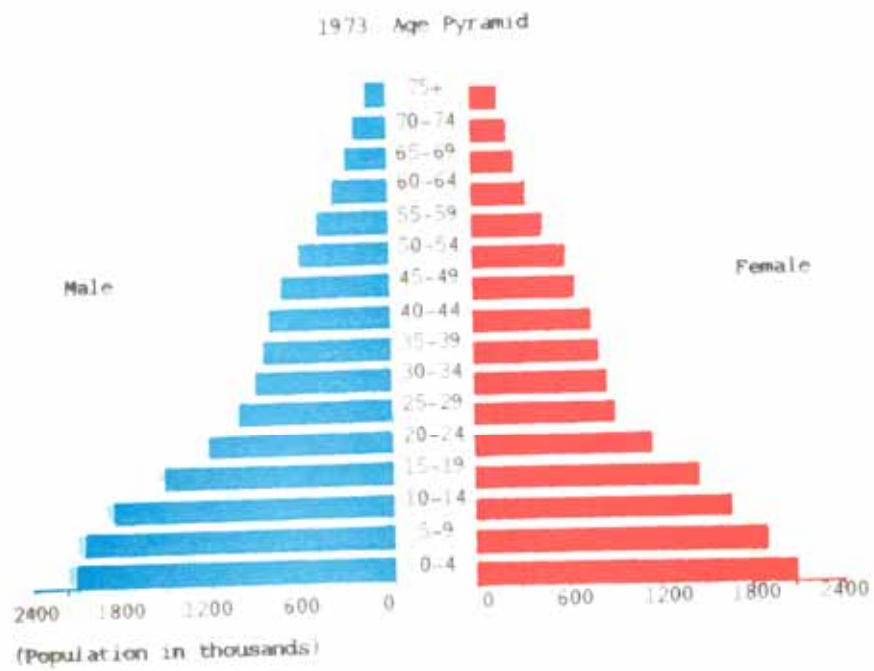

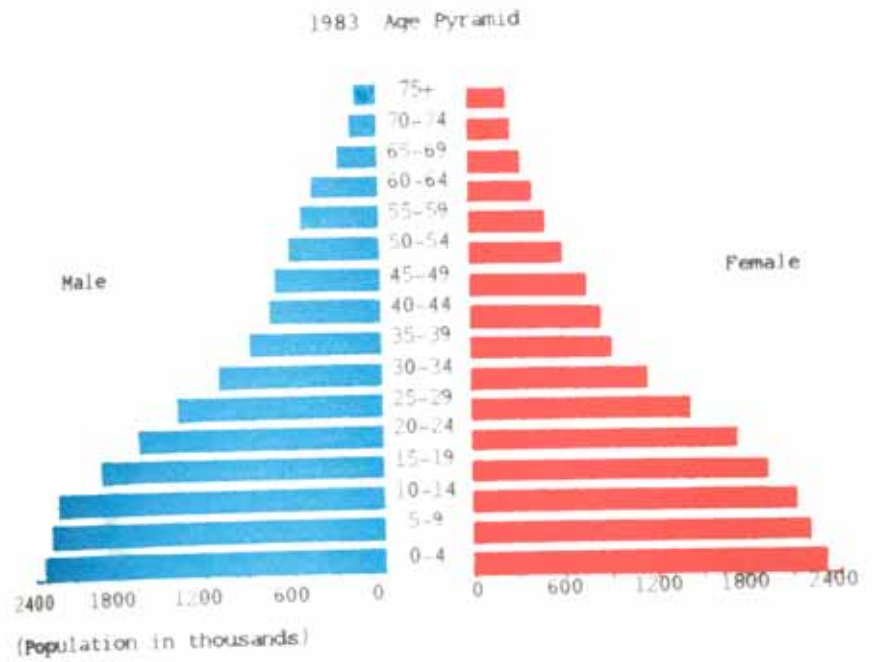

Figure 1

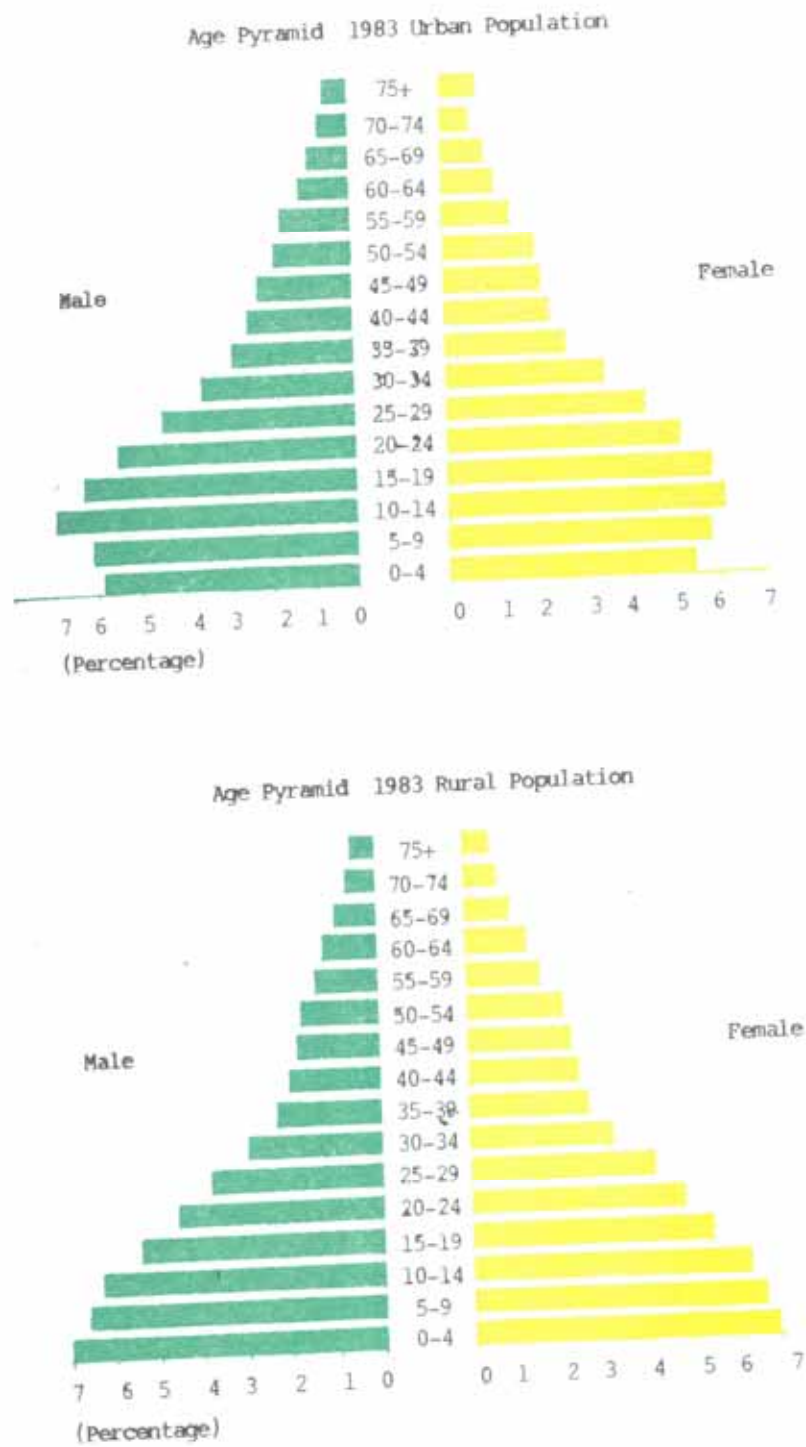

Figure 1(a)

Household

12. Of the total of 6.5 million households, 95.7 percent are family households and the remaining 4.3 percent are non-family households. Average size of household is 5.2 persons for union, urban and rural which is slightly higher than 5.0 persons as existed in 1973. Kachin state with the average of 5.8 persons per household has the highest average household size and Shan state with 5.7 shows the second highest. Irrawaddy Division has the lowest household size of 4.8 persons. In general, States have larger average household size compared to Divisions with the exception of Sagaing Division. Classification of household heads by type of household and sex shows an excess of male heads over female heads. Classification of household population by relation to head of household and marital status shows that 91.6 percent of male heads are married while widowed and divorced constitute 79.2 percent among female heads. Percentage distribution of households by household size and type of household is presented in **Table A-4**.

Table A-4
Percentage Distribution of Households by Household Size
and Type of Household

Household Size	Household Population	Total Household	Family Household	Non-Family Household
Union	33714816	6497632	6220752	276880
Percent	100	100	100	100
1 person	0.8	4.1	-	96.5
2 person	3.5	9.1	9.4	1.8
3 person	7.9	13.7	14.3	0.6

6 person	15.9	13.7	14.3	0.1
7 person	14.3	10.6	11.0	0.1
8 person	11.2	7.3	7.6	0.1
9 person	7.8	4.5	4.7	*
10 and over	11.0	5.2	5.4	0.3

* Less than 0.1 percent

Marital Status

13. For the Union as a whole, the proportion single has increased from 39.6 percent in 1973 to 42.1 percent in 1983 while the proportion married has dropped from 51.1 percent to 49.4 percent during the same period. The higher proportion single and the lower proportion married in 1983 compared to 1973 is likely to result in higher age at marriage in compared to 1973 as shown below:

		Union		Urban		Rural	
		1973	1983	1973	1983	1973	1983
Singulate mean age at marriage	Males	23.8	24.5	24.9	25.7	23.4	24.1
	Females	21.2	22.4	21.9	23.3	21.0	22.1

14. The proportion widowed constitute 5.6 percent of total urban population age 10 and over while the same for rural is 6.5 percent. The proportion divorced is higher in urban than rural. The percentate distribution of population 10 years of age and over by marital status and age is shown in **Table A -5** and a pie chart showing marital status is presented in **Figure 2**.

* Less than 0.1 percent

Race

15. Burmese which constitutes 69.0 percent of the total population shares the largest proportion among various ethnic groups in Burma, while the proportion of indigenous races other than Burmese is 25.7 percent. Foreign races (including Mixed Burmese and Foreign) constitute only 5.3 percent of the total population. Percentage distribution of population by race can be seen in Table A-6 and the chart showing distribution by race is presented in Figure 3.

Table A-6

**Percentage Distribution of Total Population
by Race for 1973 and 1983**

Race	1973	1983
Union	100	100
Kachin	1.6	1.4
Kayah	0.4	0.4
Karen	6.6	6.2
Chin	2.3	2.2

			Races		
	Burmese	23,532,433		Foreign Races	1,830,485

Figure 3

Religion

16. Buddhists with 89.4 percent constitute the largest proportion of total population. Classification by race shows that 98.7 percent of Burmese and 99.2 percent of Mons are Buddhists. Christians constitute 4.9 percent of the total population. Islamics 3.9 percent of the total population. The percentage distribution of population by religion and sex is presented in Table A-7 and a pie chart for religion is shown in **Figure 4**.

Table A-7

Percentage Distribution of Population by Religion and Sex

Others	0.1	0.1	0.1

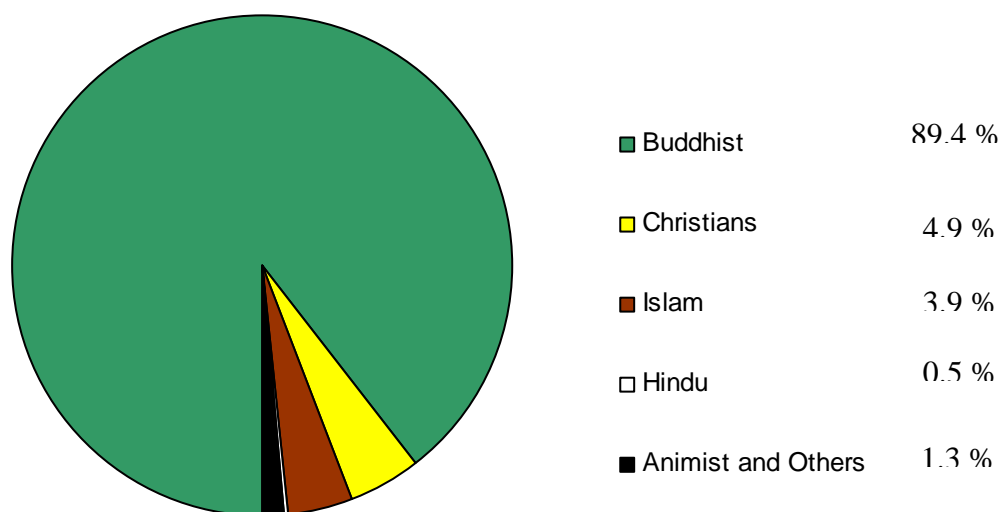

Figure 4

School Attendance

16. Of the total population of school going age 5-29 years, 35.3 percent are attending school and 64.7 percent are not attending school. The percentage attending school in urban is 46.8 as against 31.4 in rural. The percentage attending school is the highest in age group 10-14 and the difference of percentage attending school between male and female is most prominent in the same age group. In all age group, percentage for male exceeds female. The percentage distribution of person 5 to 29 years of age by school attendance is presented in Table A-8.

Table A-8
Percentage Distribution of Population 5 to 29 Years
of Age by School Attendance

Literacy and Highest Standard Passed

18. Of the total population 5 years of age and over 76.6 percent are literate and 23.4 percent are illiterate. The proportion of literate males is higher than that of females. Persons with no education level constitute 48.4 percent and persons who completed standard 1 through 4 constitute 35.6 percent. Percentage distribution of population 5 years of age and over by literacy and highest standard passed is presented in **Table A-9** and pie charts for literacy and highest standard passed are shown in **Figure 5** and **Figure 6**.

Table A-9
Percentage Distribution of Population 5 years of age and
over by Literacy, Highest Standard Passed and Sex

Literacy/Highest Standard Passed	Total	Male	Female

**Figure 5****Figure 6**

Labour Force participation

19. Of the total population 10 years of age and over 12199979 persons are in labour force. Total labour force participation rates for both sexes, male and female are 35.8 percent, 46.1 percent and 25.6 percent respectively showing a rise compared to the corresponding 1973 rates of 33.7 percent, 45.8 percent and 22.0 percent. Total participation rate for urban is 34.5 percent as against 36.2 percent for rural. Labour force participation rates by age and sex are presented in **Table A-10** and a bar chart for the same is shown in **Figure 7**.

Table A-10
Labour Force Participation by Age and Sex

Labour Force Participation	Total	10-14	15-19	20-29	30-39	40-49	50-59	60+
Union	100	100	100	100	100	100	100	100
In Labour Force	48.3	10.8	42.0	59.2	63.3	62.8	60.9	44.0
Not in Labour Force	51.7	89.2	58.0	40.8	36.7	37.2	39.1	56.0
Male	100	100	100	100	100	100	100	100
In Labour Force	62.7	10.2	48.3	78.7	85.5	84.3	81.0	60.8
Not in Labour Force	37.3	89.8	51.7	21.3	14.5	15.7	19.0	39.2
Female	100	100	100	100	100	100	100	100
In Labour Force	34.4	11.5	35.8	40.3	41.2	42.3	41.5	29.1
Not in Labour Force	65.6	88.5	64.2	59.7	58.8	57.7	58.5	70.9

Note: In collecting economic characteristics, 1983 census covered total population where as 1973 census covered household population only.

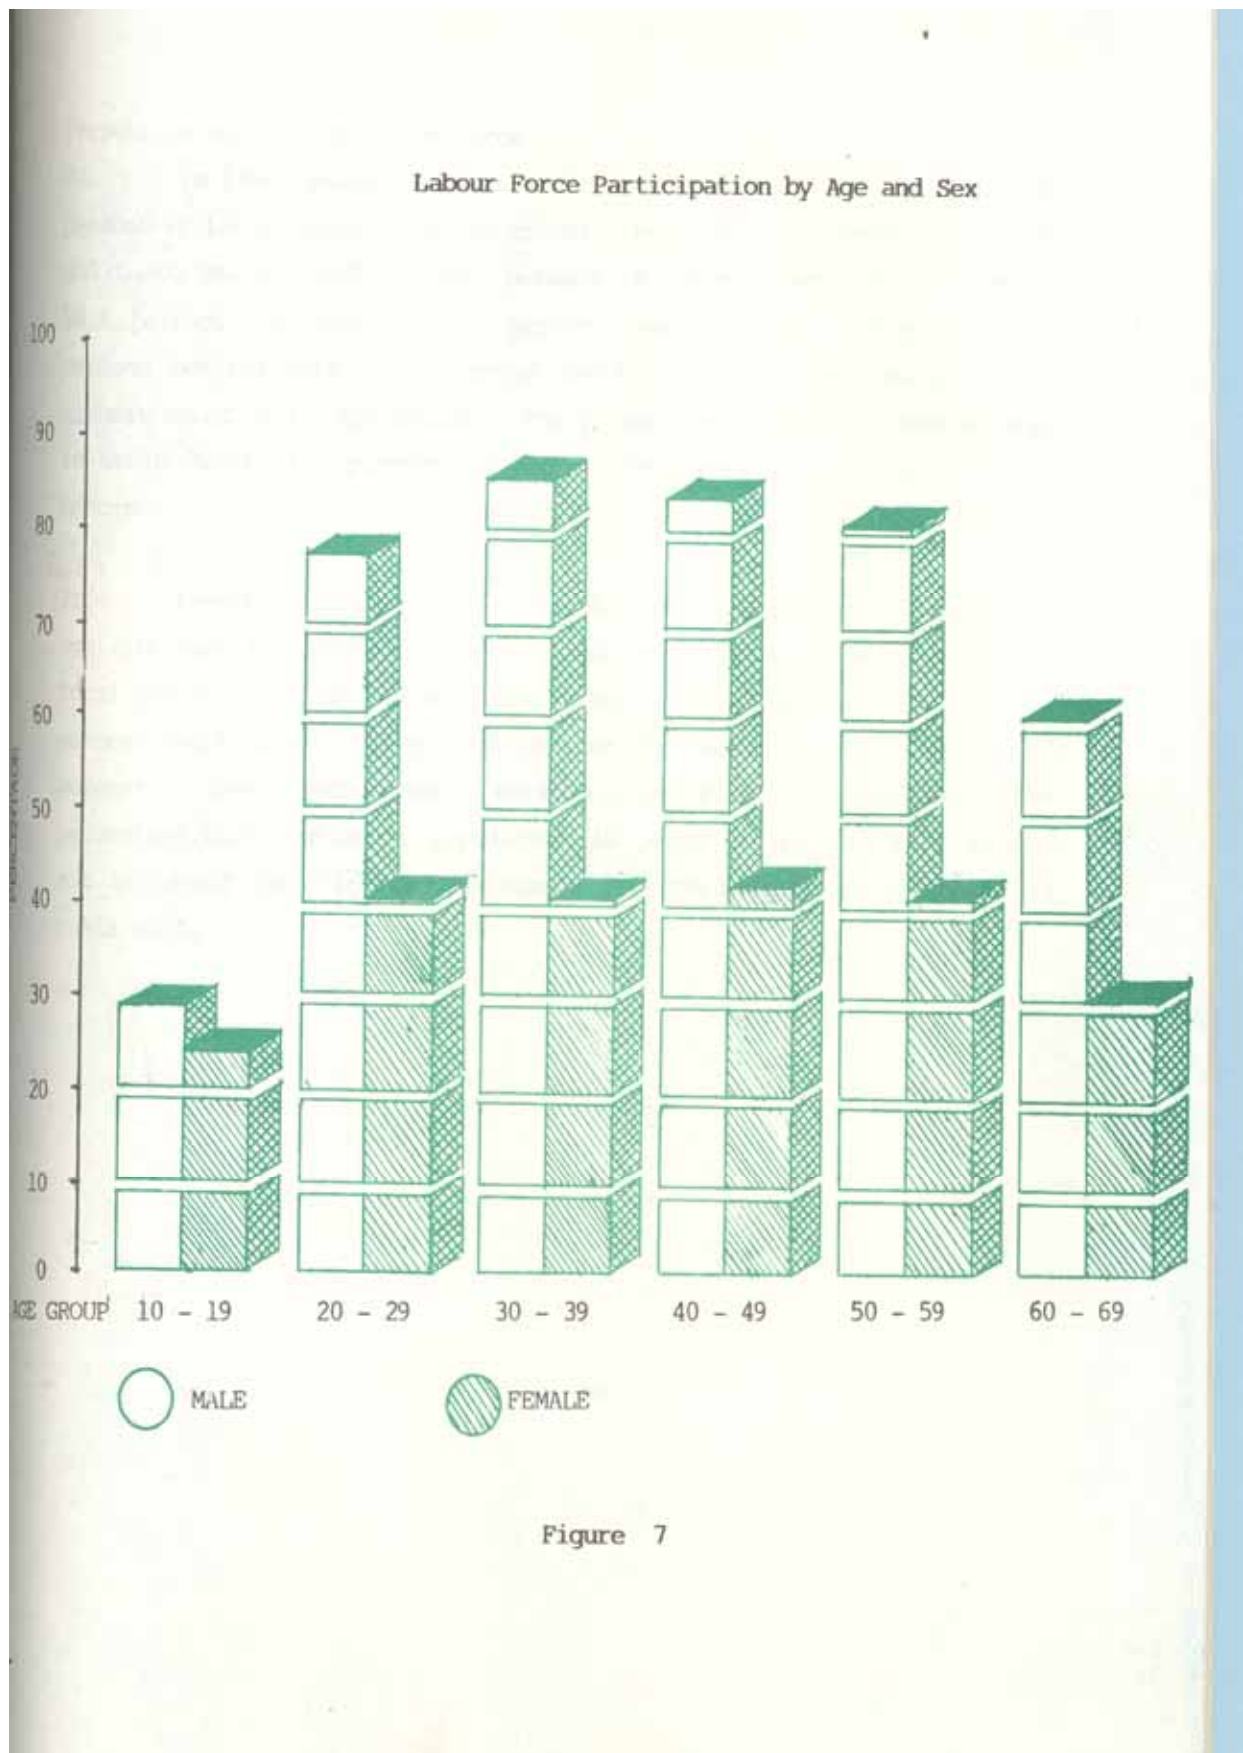

Figure 7

Persons in and not in labour force

20. In 1983 census, persons on leave were treated as employed. So persons in labour force consists of only two categories: employed persons and those seeking work. Total persons in labour force is composed of 98.4 percent employed and 1.6 percent seeking work. Proportion of persons seeking work in age group 15-19 is 3.9 percent which is the highest among all age groups. The proportion of persons seeking work in urban being 3.7 percent is higher than rural which has only 1.0 percent.

21. Persons not in Labour Force includes all persons 10 years of age and over except those who are employed or seeking work. Of the total persons not in labour force, persons doing housework with 32.2 percent constitute the largest proportion followed by students with 27.8 percent. Unemployed seasonal workers constitute 11.7 percent. The percentage distribution of population 10 years of age and over in and not in Labour Force by Age and Reason for not Working is presented in **Table A-11**.

Table A-11

**Percentage Distribution of Population 10 years and over in and not in Labour Force
by Age and Reason for not working**

Occupation

22. Among persons reporting occupation those engaged in agricultural occupation constitute 64.2 percent followed by production and related workers with 17.9 percent. Persons with agricultural occupation constitute 80.3 percent in rural while it is only 11.6 percent in urban. Cross classification by industry major groups shows that 99.4 percent of the persons with agricultural occupation are engaged in agricultural industry. Percentage distribution of employed persons by occupation and sex is given in **Table A-12** and a bar chart for the same is presented in **Figure 8**.

Table A-12

Figure 8

Industry

23. Out of total employed persons, those working in agricultural industry constitute 64.6 percent in the union total, 13.2 percent in urban and 80.4 percent in rural. Among employed females in urban, 50.2 percent are working in wholesale and retail trade and restaurants and hotels. The percentage distribution of employed persons by industry and sex is given in **Table A-13**.

Table A-13**Percentage Distribution of Employed Persons by Industry and Sex**

Industry	Total	Male	Female
Union	100	100	100
1. Agriculture, Hunting, Forestry and Fishing	64.6	66.1	62.1
2. Mining and Quarrying	0.6	0.7	0.4

8. Services	6.7	8.2	4.2
9. Activities not adequately Described	3.1	3.3	2.8

* Less than 0.1 percent

Employment Status

24. Own account workers with 39.8 percent contribute the largest proportion of the total employed persons followed by unpaid family workers with 30.2 percent. While the largest proportion of employed males, i.e. 46.5 percent, is contributed to own account workers, unpaid family workers with 47.7 percent share the largest proportion of employed females. Cross classification by industry major groups indicates that 76.2 percent of male own account workers are working in agricultural industry and 47.1 percent of female own account workers are in wholesale and retail trade and restaurants and hotels and 91.1 percent of unpaid family workers are in agricultural industry. The percentage distribution of employed persons by employment status is shown in **Table A- 14**.

Table A-14

5. Party, Peasant and Worker's Organization	0.1	0.1	*

* Less than 0.1 percent

Fertility

25. In the 1983 Census, two types of information on fertility were collected: lifetime fertility and current fertility. The number of children ever born were asked for the lifetime fertility. The date of birth of last child was asked to obtain the current fertility. For the sake of simplicity in field instructions, these fertility related questions were asked to all ever-married women. But tabulation was done only for ever-married women 15 years of age and over.

26. The number of children ever born to a particular woman is an aggregate measure of her lifetime fertility experience up to the moment the data was collected. From this information, we obtain the average parity of the women by age groups.

27. "Date of birth of last child" collected were converted to "births" in the 12 months preceding the census date. This indirect method to get the births was employed because the direct question on it might result in reporting errors from the misperception of the length of the reference period.

28. From these information, some direct measures of fertility were calculated and presented in **Table A-16** and illustrated in **Figure 9**.

Table A-16
Estimated Fertility Rates from Lifetime and
Current Data by Five Year Age Groups

Age Group	Lifetime Average parity per woman	Reported Current fertility rate
Union		
15-19	0.0941	0.0425
20-24	0.8024	0.1855

Age Specific Fertility Rates (As Reported)

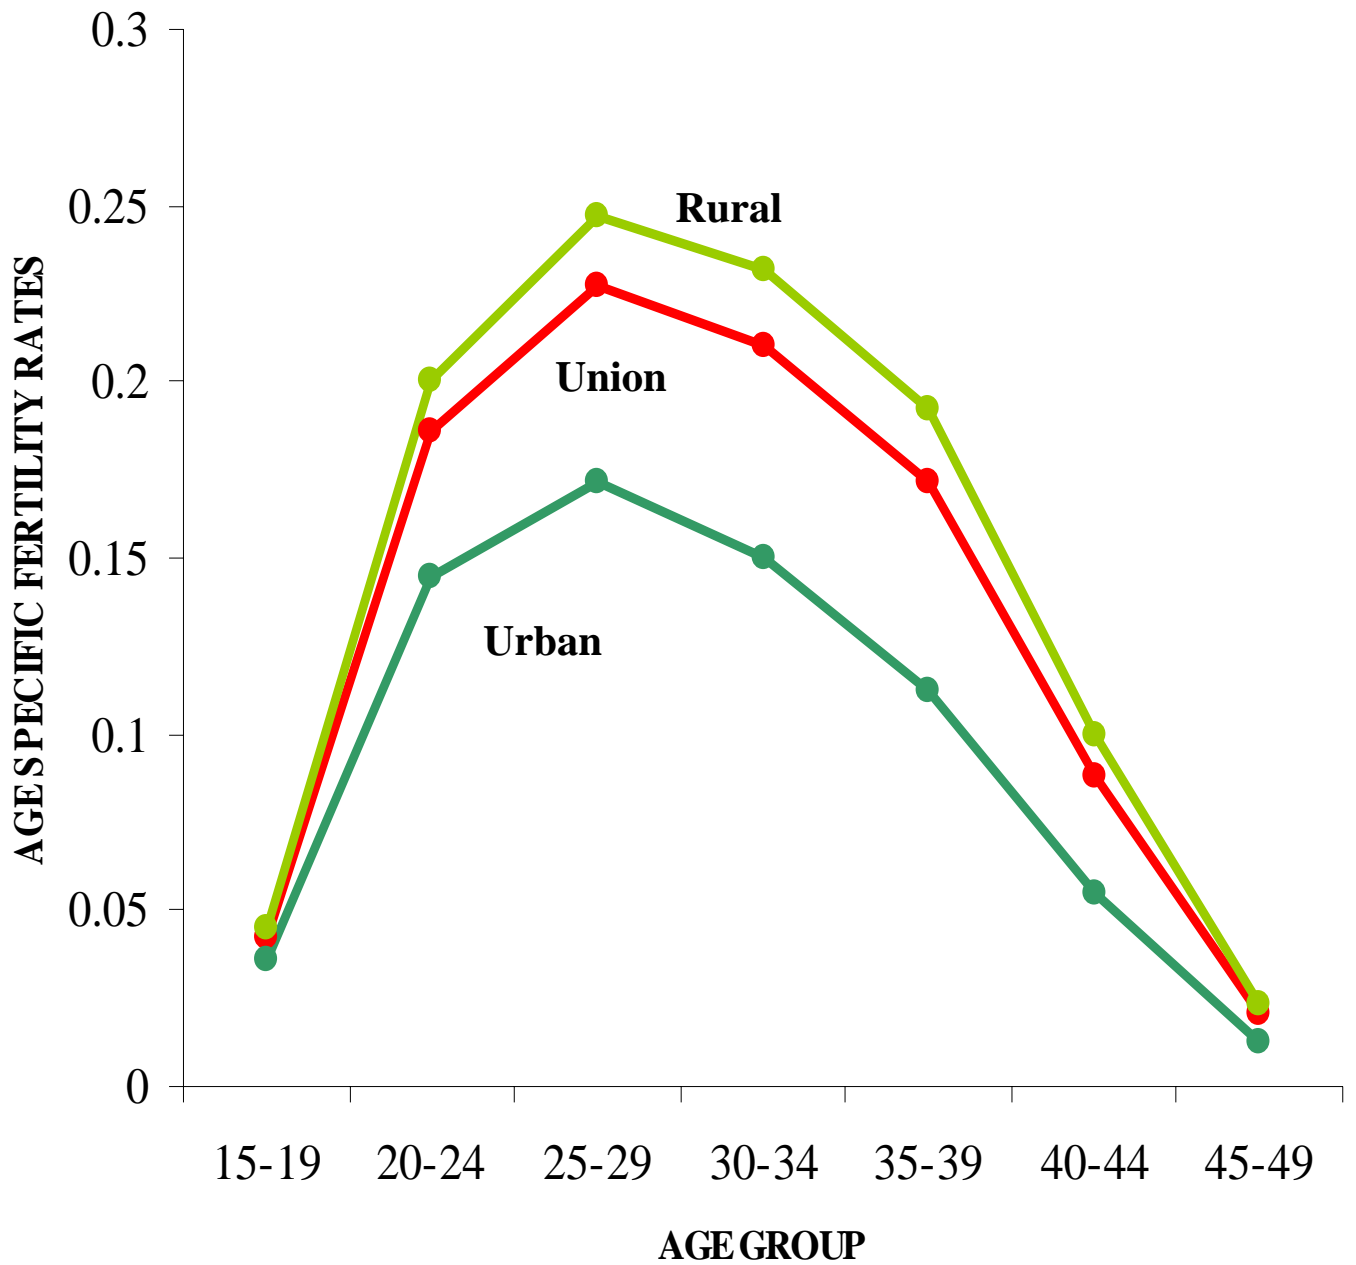

Figure 9

29. The Total Fertility Rates (TFR) and Crude Birth Rates (CBR) derived from the current fertility are as shown below:

	TFR	CBR
Total	4.73	34.77
Urban	3.41	27.19
Rural	5.20	37.28

30. The principal measures of fertility which can be derived from the number of children ever born are given below and the same for the states and divisions are given in Table A-17.

	Union	Urban	Rural
(a) Gross Fertility Ratio (Average number of children ever born to women of child-bearing age and over)	2.79	2.51	2.89
(b) Completed Fertility Ratio (Average number of children ever born to women who have reached the end of the child-bearing period i.e. 50 years and over)	4.50	4.22	4.45
(c) Proportion of childless women by the end of their reproductive span	0.13	0.14	0.13
(d) Average number of children born per women who has already borne at least one child	4.50	4.35	4.55
(e) Net Fertility Ratio (Average number of children surviving to women of child-bearing age and over)	2.20	2.05	2.26

Table A-17**Some Selected Fertility Indicators by States and Divisions**

State/Division	Gross Fertility Ratio	Completed Fertility Ration	Proportion of Childless	Average Number of Children	Net Fertility Ratio
Kachin State	3.03	5.07	0.147	4.98	2.22

CHAPTER IV

ASSESSMENT OF QUALITY OF CENSUS DATA

1. A population census is a large scale and complex operation; so far countries throughout the world have not found a method to conduct an error free census. It is accepted that there will always be some kind of errors in the census data to a certain extent. If the errors are within reasonable limits the data are valuable, so there is a need to evaluate the magnitude of the errors to throw light on the quality of the census data.
2. There are two types of errors, namely the sampling error and the non-sampling error. Sampling error occurs when observations are made on a sample basis. All estimates based on the 20 percent enumeration of the 1983 census were subject to sampling error. The non-sampling errors are essentially human errors that occur at the time of enumeration or during the processing of the raw data. The sampling and non-sampling error estimation procedures are described in the subsequent paragraphs.

Sample Design

3. The 1983 Census was the first nation wide census to adopt the sampling technique to collect population data using two different questionnaires; a short form consisting of 7 questions to be asked to 80 percent of the population and a long form consisting of 18 questions for the remaining 20 percent on a sample basis.
4. The sampling technique was adopted because it has general advantages over the traditional full enumeration. It is cheaper, makes possible the selection of better quality enumerators for the sample blocks, improved training, supervision and control over the field staff and reduces the number of staff and time required for data processing.

5. To select the 20 percent sample blocks, a one-stage stratified, replicated, systematic sampling method was adopted in order to meet the following requirements:

- (a) to compute the estimates of the population parameters and their standard errors for each state and divisions efficiently;
- (b) to minimize certain administrative efforts.

6. Firstly, in order to satisfy the above requirement (a), the whole country was stratified into fourteen states and divisions. Secondly, within each state and division, the census blocks were stratified into either urban or rural grouping. Finally, within each urban and rural grouping, the blocks were further stratified geographically into townships. This provides a good distribution of the sample over the various geographical areas of the country.

7. Thus, for each state and division there was a list of census blocks which were ordered as mentioned above. Ten sub-samples (replicates) of about equal size from urban block list and ten sub-samples from the rural block list were selected systematically. The use of replication in the design was to simplify the computation of sampling errors of the estimates and to facilitate the selection of samples for subsequent surveys.

Estimation Procedures

8. A ratio estimation method was adopted to estimate the population parameters on the basis of information obtained from 20 percent sample. Ratio estimates were computed separately for each state and division. This method was adopted because of the following advantage:

- (a) it removes any inconsistency between the estimates based on a sample and the complete headcounts for basic characteristics such as age and sex;
- (b) it produces more precise estimates by utilising information obtained from the complete count.

9. The ratio estimation process involved the assignment of integral weights to the sample records. Separate ratio estimates were prepared for 14 age groups and sex in each state and division. The weights for the ratio adjustments are usually non- integral and if straightly applied would lead to non- integral counts in the results. In practice, integral weights are used for blowing-up purposes. For example, if the ratio for a group was 4.2, one-fifth of the persons (selected at random) within the group were assigned a weight of 5, and the remaining four-fifth a weight of 4. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final data.
10. Within each strata, the formulae for the estimation of variance is as follows:

$$\text{Var (X)} = \frac{(1-f) c}{(c-1)} \sum_{i=1}^{10} \left(X_i - \frac{X}{c} \right)^2$$

where:

X_i = the 'blown-up ' estimate of a total for the i th replicate

$X = \sum_{i=1}^{10} X_i$ i.e summed over all ten replicates

$c = 10$ (the number of replicates)

f = the sampling fraction

11. Table A-18 gives the sample, estimates, standard errors and the 95 percent confident interval estimates for some selected variables.

Table A-18
Sample Estimates, Standard Errors and 95 Percent

Post Enumeration Check (PEC)

12. In executing a large scale data collection operation like a census there will be errors of coverage. Some of these errors will be positive and tend to overcount the population. Others will be negative in nature and tend to undercount the population. It is usual to follow up a census with post enumeration checks to evaluate the completeness of the census coverage and the accuracy of its results.

13. For the 1983 Census, the PEC was planned and carried out as an integral part of the exercises. The specific objectives of the PEC are as follows:

- (a) to estimate the completeness and accuracy of the 1983 Census, that is, to estimate the non-sampling errors which occur at the time of census enumeration;
- (b) to gain experience in conducting a sample survey;
- (c) to specify problem areas in conducting the PEC and to indicate improved procedures for future data collection activities.

14. The 1984 Burmese PEC was the first to be carried out in Burma; PEC re-enumeration took place exactly 1 year after the 1983 Census on a de jure basis. Its reference date was 31 March 1984. The questionnaire consisted of 5 basic questions, which are name, relationship to head of household, sex, age and marital status; an advantage was taken to incorporate some additional topics of interest in the questionnaire. The topics chosen were place of birth and place of residence. Information on birth and deaths, in-movers and out-movers were also collected in order to facilitate the PEC study.

15. The 1984 PEC did not cover the full 1983 Census population, as the PEC sampling frame excluded institutional and moving population as well as the population from the remote and difficult to access areas. Exclusions were made because the cost of conducting the PEC in those areas would have been disproportionate to the population residing there. Areas covered in the PEC are as follows:

Area	1983 Census	1984 PEC
Union	100	87.7%
Urban	100	93.1%
Rural	100	85.6%

16. The sample for the PEC consisted of 450 census blocks. These were selected in two phases. In the first phase, 412 census blocks were selected. The selection procedure involved classifying the census blocks of the PEC sampling frame into urban and rural strata. Replicated systematic sampling method was then used to select 256 rural blocks (in 8 sample replicates) and 156 urban blocks (in 6 sample replicates). Among urban blocks, 38 were from Rangoon city and 118 from other urban areas.

17. In the second phase, 39 additional blocks were selected from the Rangoon city in order to estimate the completeness of that area separately. These blocks were randomly assigned to the 6 urban replicates. As a result, the PEC sample was distributed across three strata as follows:

Strata	No. of sample replicates	census blocks
Rangoon city	6	77
Other urban	6	117
Rural areas	8	256
Total		450

18. The matching operation was accomplished manually in two phases; household matching and person matching. Within each of the 450 sample blocks, household matching was accomplished by comparing the 1983 Census and the PEC questionnaires. For a matched household, the information obtained from the PEC was subsequently matched with the information obtained from the census on a person to person basis to measure the extent of discrepancies between the two sets of results. The number of unmatched households and persons, that is, those who were enumerated in the PEC but not in the census, gave an indication of the under coverage of households and persons respectively. The matchings were done at the Immigration and Manpower Department headquarters.

19. The results of the PEC showed that coverage for the union of Burma was 99.1 percent and those for the Union urban and the Union rural were 98.7 percent and 99.2 percent respectively. These results show that there were no significant differences between the data from the census and the PEC. Therefore, no adjustment of the census data was made on the basis of the findings of the PEC.

20. For assessing reliability of the data collected in respect of the age items, the completed pairs of census and PEC questionnaires of the 97569 matched persons were compared. It shows that 95.6 percent have the same age (taking the different reporting periods into consideration). For urban areas, out of 26894 matched persons, 94.8 percent also have the same age. For the rural areas, 96.0 percent of 48378 matched persons have the same age. **Table A-19** shows the comparison of age, reporting between the 1983 census and the PEC by five year age groups.
